**Subject: Servicing rear traction hydraulic tubes.**

Reelmaster 4000 Series 4WD tractors are built with one-piece Hydraulic Tubes (98-1262) for rear wheel motor forward and reverse oil supply. These tubes are installed before the tractor is fully assembled. This design can cause difficulty when replacing these tubes, due to the many obstacles on the tractor chassis.

A two-piece assembly is now available to make replacement of this tube easier. All future orders for the one-piece tube will cross-reference to Hydraulic Tube Kit (105-3333). This kit is now available through your local Toro Commercial Products Distributor.
