Workman® Topdresser 1800

Model/Serial Range:	Model Number:	Serial Numbers:
	44220	30001-40410

Subject: Uneven distribution of fine grain sand.

When attempting to spread a light even layer of very fine or wet sand, the material may tend to slip on the belt. This slippage may result in no or uneven distribution of the material.

A "Pebble Top" Conveyor Belt (01-271-0390) is available and was factory installed on the Topdresser 1800 beginning with serial number 40411. The design of the belt surface reduces material slippage that may occur under isolated conditions when applying fine or wet sand. This belt is available through your local Toro distributor.

Once stock of the original Conveyor Belt has been depleted all future orders will cross reference to "Pebble Top" Conveyor Belt (01-271-0390).
