

PROTECTING YOU AND YOUR BUSINESS

Safe Products Designed to Provide Peace of Mind

Toro's outstanding reputation in the landscape maintenance industry is due, in large part, to our long-term focus on designing safe products and providing industry-leading safety education. Just one example: All Toro® Z Master® Z400 and Z500 Series zero-turn riders are equipped with a folding roll-over protection system as a standard feature. Plus, every piece of Toro landscape contractor equipment is tested in voluntary compliance with the strict requirements of the American National Standards Institute.

Safety Education for You and Your Employees

Our commitment to safety doesn't end with product testing. Toro has partnered with the National Safety Council to develop training materials for the commercial lawn care industry. Our goal: Reduce the level of preventable incidents among operators of zero-turn commercial mowers. Toro's free bilingual video, *Driving in the Safety Zone*, teaches operators to make smart choices and avoid hazards when using commercial mowing equipment. You'll also find product safety releases, operator safety tips, safety manuals, and material safety data sheets at toro.com/safety.

Performance Evaluations — For the Pros, and By the Pros

Each new Toro product is subjected to extensive laboratory and field evaluation to ensure it will withstand the rigors of commercial use. In addition to high-tech testing at Toro's corporate headquarters, field test sites from coast to coast evaluate product performance in assorted turf varieties and diverse environmental conditions. Even after all of this testing, we still place product samples in the field with landscape professionals, to ensure they perform as intended.
