

ProLine
52" Mower
for Mid-Size Traction Unit
Model No. 30152 – 890001 & Up

Operator's Manual

IMPORTANT: Read this manual carefully. It contains information about your safety and the safety of others. Also become familiar with the controls and their proper use before you operate the product.

Introduction

We want you to be completely satisfied with your new product, so feel free to contact your local Authorized Service Dealer for help with service, genuine replacement parts, or other information you may require.

Whenever you contact your Authorized Service Dealer or the factory, always know the model and serial numbers of your product. These numbers will help the Service Dealer or Service Representative provide exact information about your specific product. You will find the model and serial number plate located in a unique place on the product as shown below.

1. Model and Serial Number Plate

1074

For your convenience, write the product model and serial numbers in the space below.

Model No: _____
Serial No. _____

The warning system in this manual identifies potential hazards and has special safety messages that help you and others avoid personal injury, even death. DANGER, WARNING and CAUTION are signal words used to identify the level of hazard. However, regardless of the hazard, be extremely careful.

DANGER signals an extreme hazard that will cause serious injury or death if the recommended precautions are not followed.

WARNING signals a hazard that may cause serious injury or death if the recommended precautions are not followed.

CAUTION signals a hazard that may cause minor or moderate injury if the recommended precautions are not followed.

Two other words are also used to highlight information. “Important” calls attention to special mechanical information and “Note” emphasizes general information worthy of special attention.

The left and right side of the machine is determined by sitting on the seat in the normal operator’s position.

Assembly

Loose Parts

Note: Use the chart below to identify parts used for assembly.

DESCRIPTION	QTY.	USE
Castor Wheel Assembly	2	Install castor wheels to carrier frame
Thrust Washer	8	
Spacer	2	
Retaining Ring	2	
Carrier Frame	1	Install carrier frame to traction unit
Flange Screw 1/2–13 x 1" (25 mm)	6	
Flange Nut 1/2–13	6	
Adjusting Shaft	2	Install adjusting shafts
Jam Nut 1/2–13	4	
Spacer 1/2" (13 mm)	2	
Spring	2	
Bushing	2	
Clevis Pin	4	Install cutting unit to carrier frame
Hairpin Cotter	4	
Operator's Manual	1	Read before operating
Parts Catalog	1	Ordering parts

Installing the Castor Wheels

1. Place the (2) thrust washerS and spacer onto the castor wheel fork (Fig. 1).
2. Insert the castor wheel fork into the carrier frame mounting tube (Fig. 1).
3. Install (2) thrust washer onto the castor wheel fork, then secure with a retaining ring (Fig. 1).

Figure 1

- | | |
|--------------------------------|----------------------|
| 1. Retaining Ring | 4. Spacer |
| 2. Thrust Washer (4) | 5. Castor Wheel Fork |
| 3. Carrier Frame Mounting Tube | |

Installing the Carrier Frame to the Traction Unit

1. Align the carrier frame holes with the mounting holes in the traction unit frame (Fig. 2).
2. Fasten each side of the carrier frame to the traction unit with three (3) 1/2" x 1" (25 mm) flange screws and locknuts. Torque the mounting screws to 60–80 ft-lb (81–109 N•m) (Fig. 2).

Figure 2

- | | |
|------------------|------------------------|
| 1. Carrier Frame | 2. Traction Unit Frame |
|------------------|------------------------|

4. Set the castor wheel tire pressure to 12–15 psi (83–103 kPa).

Installing the Cutting Deck

1. Position the cutting deck under the carrier frame.
2. Mount the cutting deck to the carrier frame with four (4) clevis pins and hairpin cotters (Fig. 3).

Note: All four pins must be in the same hole locations to prevent uneven cutting.

Figure 3

- | | |
|-------------------------------|---------------------------|
| 1. 2" (51 mm) Cut Height | 7. 5" (127 mm) Cut Height |
| 2. 2-1/2" (64 mm) Cut Height | 8. Clevis Pin |
| 3. 3" (76 mm) Cut Height | 9. Carrier Frame |
| 4. 3-1/2" (89 mm) Cut Height | 10. Cutting Deck |
| 5. 4" (102 mm) Cut Height | 11. Hairpin Cotter |
| 6. 4-1/2" (114 mm) Cut Height | |

Installing the Drive Belt

1. Remove the hand knobs holding the deck cover to the top of the cutting unit and remove the deck cover.
2. Install the drive belt around the drive pulley on the traction unit and the upper groove of the center spindle pulley. The belt must be between the belt guides (Fig. 4).
3. Reinstall the deck cover onto the cutting unit, then reinstall and tighten the hand knobs.

m-2545

Figure 4

- | | |
|-------------------------------|--------------------------|
| 1. Belt Guide (2) | 3. Drive Belt |
| 2. Traction Unit Drive Pulley | 4. Center Spindle Pulley |

4. Thread two (2) 1/2" jam nuts approximately 9" (22.8 cm) up on each adjusting shaft (Fig. 5).
5. Slide a 1/2" spacer, spring and bushing onto each adjusting shaft. Make sure to install the bushing with the flange end against the spring (Fig. 5).

Figure 5

- | | |
|---------------------|---|
| 1. 1/2" Jam Nut (2) | 5. Adjusting Shaft |
| 2. 1/2" Spacer | 6. Locknut (already installed on Adjusting Shaft) |
| 3. Spring | |
| 4. Bushing | |

6. Insert the spring end of the adjusting shaft into the hole in the deck mounting bracket. Note that the small end of the bushing fits into the hole in the deck bracket. Insert the locknut end of the adjusting shaft into the carrier frame mounting tab (Fig. 6).
7. To tension the belt, tighten the front jam nut on each adjusting shaft until the springs are compressed to 5" (12.7 cm). Measure the spring compression between the spacer and the bushing (Fig. 6).
8. Tighten the rear jam nuts (Fig. 6).

Figure 6

- | | |
|--------------------------------------|-------------------------------|
| 1. 5" between the Spacer and Bushing | 4. Rear Jam Nut |
| 2. Deck Mounting Bracket | 5. Carrier Frame Mounting Tab |
| 3. Front Jam Nut | |

9. Check the position of the belt guides. The guides should be positioned about 1/8" (3 mm) away from the belt (Fig. 7). Adjust the belt guides as necessary.

Figure 7

- | | |
|-------------------|---------------|
| 1. Belt Guide (2) | 2. Drive Belt |
|-------------------|---------------|

10. Check the front-to-rear blade pitch. Refer to Setting the Front-to-Rear Pitch in the Maintenance section.

Operation

Side Discharge or Mulch Grass

The mower has a hinged grass deflector that disperses clippings to the side and down toward the turf.

DANGER

POTENTIAL HAZARD

- Without the grass deflector or complete grass catcher assembly mounted in place, you and others are exposed to blade contact and thrown debris.

WHAT CAN HAPPEN

- Contact with rotating mower blade(s) and thrown debris will cause injury or death.

HOW TO AVOID THE HAZARD

- NEVER remove the grass deflector from the mower because the grass deflector routes material down toward the turf. If the grass deflector is ever damaged, replace it immediately.
- Never put your hands or feet under the mower.
- Never try to clear discharge area or mower blades unless you move the power take-off (PTO) to “OFF” and rotate the ignition key to “OFF.” Also remove the key and pull the wire(s) off the spark plug(s).

Engaging the Mower Blades (PTO)

The blade control switch (PTO) in conjunction with the blade control bail engages and disengages power to the electric clutch and mower blades.

1. Pull on the upper control bar to stop the machine (Fig. 8).
2. To engage the blades, squeeze the blade control bail against the upper control bar.
3. Press the blade control rocker switch forward to “ON”. Hold the blade control bail against the control bar while operating.

Note: Repeat the procedure to engage the mower blades if the blade control bail is released.

4. To disengage the blades, release the blade control bail, or push the blade control switch to the “OFF” position.

Figure 8

- | | |
|-----------------------|-------------------------------|
| 1. Upper Control Bar | 3. Blade Control Switch (PTO) |
| 2. Blade Control Bail | |

Adjusting the Height-of-Cut

The height-of-cut is adjustable from 2" to 5" (51 to 127 mm) in 1/2-inch (13 mm) increments by relocating the clevis pins in different hole locations in brackets at each corner of the cutting unit (Fig. 9).

Stop the engine before adjusting the height-of-cut.

Note: All four pins must be in the same hole location for even cutting.

Figure 9

- | | |
|------------------------------|-------------------------------|
| 1. 2" (51 mm) Cut Height | 6. 4-1/2" (114 mm) Cut Height |
| 2. 2-1/2" (64 mm) Cut Height | 7. 5" (127 mm) Cut Height |
| 3. 3" (76 mm) Cut Height | 8. Clevis Pin |
| 4. 3-1/2" (89 mm) Cut Height | 9. Hairpin Cotter |
| 5. 4" (102 mm) Cut Height | |

Adjusting Gage Wheels

The gage wheels must be adjusted in the proper hole location for each height-of-cut position.

1. After adjusting height-of-cut, raise the attachment lift lever: Refer to Raising Attachments.
2. Remove hairpin cotter and pin to change hole location (Fig. 10).
3. Select a hole position so the gage wheel is 3/8" (9.5 mm) off the ground for the height-of-cut to be used (Fig. 10).
4. Insert pin and secure with hairpin cotter.
5. Repeat adjustment on other gage wheels.

Figure 10

| 1. Wheel | 3. Hair pin Cotter |
| 2. Pin | |

Tips for Mowing Grass

Fast Throttle Setting

For best mowing and maximum air circulation, operate the engine at “FAST.” Air is required to thoroughly cut grass clippings, so do not set the height-of-cut so low as to totally surround the mower by uncut grass. Always try to have one side of the mower free from uncut grass, which allows air to be drawn into the mower.

Cutting a Lawn for the First Time

Cut grass slightly longer than normal to ensure the cutting height of the mower does not scalp any uneven ground. However, the cutting height used in the past is generally the best one to use. When cutting grass longer than six inches tall, you may want to cut the lawn twice to ensure an acceptable quality of cut.

Cut 1/3 of the Grass Blade

It is best to cut only about 1/3 of the grass blade. Cutting more than that is not recommended unless grass is sparse, or it is late fall when grass grows more slowly.

Mowing Direction

Alternate mowing direction to keep the grass standing straight. This also helps disperse clippings which enhances decomposition and fertilization.

Mow at Correct Intervals

Normally, mow every four days. But remember, grass grows at different rates at different times. So to maintain the same cutting height, which is a good practice, mow more often in early spring. As the grass growth rate slows in mid summer, mow less frequently. If you cannot mow for an extended period, first mow at a high cutting height; then mow again two days later at a lower height setting.

Cutting Speed

To improve cut quality, use a slower ground speed.

Avoid Cutting Too Low

If the cutting width of the mower is wider than the mower you previously used, raise the cutting height to ensure that uneven turf is not cut too short.

Long Grass

If the grass is ever allowed to grow slightly longer than normal, or if it contains a high degree of moisture, raise the cutting height higher than usual and cut the grass at this setting. Then cut the grass again using the lower, normal setting.

When Stopping

If the machine's forward motion must be stopped while mowing, a clump of grass clippings may drop onto your lawn. To avoid this, move onto a previously cut area with the blades “ENGAGED”.

Keep the Underside of the Mower Clean

Clean clippings and dirt from the underside of the mower after each use. If grass and dirt build up inside the mower, cutting quality will eventually become unsatisfactory.

Blade Maintenance

Maintain a sharp blade throughout the cutting season because a sharp blade cuts cleanly without tearing or shredding the grass blades. Tearing and shredding turns grass brown at the edges, which slows growth and increases the chance of disease. Check the cutter blades daily for sharpness, and for any wear or damage. File down any nicks and sharpen the blades as necessary. If a blade is damaged or worn, replace it immediately with a genuine TORO replacement blade.

Maintenance

Service Interval Chart

Service Operation	Each Use	8 Hours	25 Hours	Storage Service	Notes
Cutting Blades – check		X		X	
Belts – check for wear/cracks				X	
Blade Spindle Bearings – grease		X			
Idler Arm – grease			X		
Castor Wheels – grease			X		
Mower Housing – clean	X	X		X	
Chipped Surfaces – paint				X	

Cutting Blades

To ensure a superior quality of cut, keep the blades sharp. For convenient sharpening and replacement, you may want to keep extra blades on hand.

WARNING

POTENTIAL HAZARD

- A blade that is worn or damaged could break apart and pieces could be thrown at bystanders or at you as you use the mower.

WHAT CAN HAPPEN

- Pieces of blade that may be thrown could seriously injure or kill you or bystanders.

HOW TO AVOID THE HAZARD

- Periodically inspect the blade for wear and damage. Immediately install a new blade if it is worn or damaged.

Before Inspecting or Servicing the Blades

Park the machine on a level surface, disengage the blade control (PTO) and set the parking brake. Turn the ignition key to “OFF” to stop the engine. Remove the key and disconnect the spark plug wire(s) from the spark plug(s).

Inspecting the Blades

1. Inspect the cutting edges (Fig 11). If the edges are not sharp or have nicks, remove and sharpen the blades. Refer to Sharpening the Blades on page 12.
2. Inspect the blades, especially the curved area (Fig. 11). If you notice any damage, wear, or a slot forming in this area (item 3 in Fig. 11), immediately install a new blade.

Figure 11

- | | |
|-----------------|----------------------|
| 1. Cutting Edge | 3. Wear/slot Forming |
| 2. Curved Area | |

Checking for Bent Blades

1. Rotate the blades until the ends face forward and backward (Fig. 12). Measure from a level surface to the cutting edge of the blades (Fig. 13). Note this dimension.

Figure 12

Figure 13

2. Rotate the opposite ends of the blades forward. Measure from a level surface to the cutting edge of the blades at the same position as in step 1 above. The difference between the dimensions obtained in steps 1 and 2 must not exceed 1/8" (3 mm). If this dimension exceeds 1/8" (3 mm), the blade is bent and must be replaced. Refer to Removing the Blades, and Installing the Blades on page 12.

! WARNING

POTENTIAL HAZARD

- A blade that is bent or damaged could break apart and pieces could be thrown at bystanders or at you as you use the mower.

WHAT CAN HAPPEN

- Pieces of blade that may be thrown could seriously injure or kill you or bystanders.

HOW TO AVOID THE HAZARD

- Always replace bent or damaged blade with a new blade.
- Never file or create sharp notches in the edges or surfaces of blade.

Removing the Blades

Blades must be replaced if a solid object is hit, if the blade is out of balance or is bent. To ensure optimum performance and continued safety conformance of the machine, use genuine TORO replacement blades. Replacement blades made by other manufacturers may result in non-conformance with safety standards.

Hold the blade end using a rag or thickly-padded glove. Remove the blade bolt, washer, anti-scalp cup and blade from the spindle shaft (Fig. 14).

Figure 14

- | | |
|-------------------|---------------|
| 1. Spindle shaft | 4. Washer |
| 2. Blade | 5. Blade Bolt |
| 3. Anti-scalp cup | |

Sharpening the Blades

1. Use a file to sharpen the cutting edge at both ends of the blade (Fig. 15). Maintain the original angle. The blade retains its balance if the same amount of material is removed from both cutting edges.

Figure 15

1. Sharpen at original angle

2. Check the balance of the blade by putting it on a blade balancer (Fig. 16). If the blade stays in a horizontal position, the blade is balanced and can be used. If the blade is not balanced, file some metal off the end of the sail area only (Fig. 14). Repeat this procedure until the blade is balanced.

Figure 16

1. Blade
2. Balancer

Installing the Blades

1. Install the blade onto the spindle shaft (Fig. 14).

IMPORTANT: The curved part of the blade must be pointing upward toward the inside of the mower to ensure proper cutting.

2. Install the lock washer and blade bolt (Fig. 14). Torque the blade bolt to 85–110 ft-lb (115–140 N•m).

Correcting Cutting Unit Mismatch

If one cutter blade cuts lower than the other, correct as follows:

1. Stop the engine, remove the key and disconnect the spark plug wire(s) from the spark plug(s).
2. Adjust the tire pressure in all tires to specifications and check that the blades are not bent. Refer to Checking for Bent Blades on page 11.
3. Set the height-of-cut to the 2-1/2" position. Refer to Adjusting the Height-Of-Cut in the Operation section. Make sure the clevis pins are resting on the frame cushions.
4. Rotate the blades so the tips line up with one another. The blade tips must be within 1/8" (3 mm) of each other. If the blade tips are not within 1/8" (3 mm) of each other, add shims (Part No. 3256-24) between the appropriate spindle housing and the bottom of the cutting unit to align the blades.

Setting the Front-to-Rear Pitch

1. Check the tire pressure.
2. Position the blades front-to-rear (Fig. 17). Measure at "C" and "D" locations (Fig. 17) from a level surface to the cutting edge of the blades (Fig. 18).
3. The mower should be 1/8"–5/8" (3–16 mm) lower in front "C" than in the rear "D".

Figure 17

Figure 18

4. To change the front-to-rear pitch, move an equal number of thrust washers on both castor wheel forks. Move the thrust washers from the top of the carrier frame mounting tube to the bottom to raise the front of the mower. Move the thrust washers from the bottom of the mounting tube to the top to lower the front of the mower. (Fig. 19).
5. Check the side-to-side leveling of the cutting unit.

Figure 19

- | | |
|--|----------------------|
| 1. Thrust Washers (locate as required) | 3. Castor Wheel Fork |
| 2. Carrier Frame Mounting Tube | |

m-3983

Setting the Side-to-Side Leveling

1. Check the tire pressure.
2. Position the blades side-to-side (Fig. 20). Measure at "A" and "B" locations (Fig. 20) from a level surface to the cutting edge of blades (Fig. 21).
3. The difference between measurements "A" and "B" should be no more than 1/4" (6 mm).

m-1078

Figure 20

MEASURE FROM
CUTTING EDGE TO A
LEVEL SURFACE

m-2550

Figure 21

4. To change the side-to-side leveling, move the thrust washers on one castor wheel fork only. Move the thrust washers from the top of the carrier frame mounting tube to the bottom to raise the corresponding side of the mower. Move the thrust washers from the bottom of the mounting tube to the top to lower the corresponding side of the mower. (Fig. 19).
5. Recheck the front-to-rear pitch of the cutting unit.

Greasing the Bearings and Bushings

The cutting unit must be lubricated regularly. Refer to the Service Interval Chart on page 10. Grease with No. 2 general purpose lithium base or molybdenum base grease.

1. Stop the engine, remove the key and disconnect the spark plug wire(s) from the spark plug(s).
2. Grease the fittings on the three spindle bearings and the idler arm (Fig. 23).

Note: You'll have to remove the deck cover to access the grease fitting on the idler arm.

3. Grease the fittings on the carrier frame mounting tubes and castor wheels (Fig. 22).

Figure 22

- | | |
|---|--------------------------------|
| 1. Carrier Frame Mounting Tube Grease Fitting | 2. Castor Wheel Grease Fitting |
|---|--------------------------------|

Replacing the Deck Belt

Squealing when the belt is rotating, blades slipping when cutting grass, frayed belt edges, burn marks and cracks are signs of a worn deck belt. Replace the deck belt if any of these conditions are evident.

1. Stop the engine, remove the key and disconnect the spark plug wire(s) from the spark plug(s).
2. Remove the hand knobs holding the deck cover to the top of the cutting unit and remove the deck cover.
3. Remove the drive belt. Refer to Replacing the Drive Belt, steps 1–4 on page 16.
4. Disconnect the idler arm spring to relieve tension on the idler arm and idler pulley, then remove the worn deck belt (Fig. 23).
5. Install the new deck belt around the two outboard spindle pulleys, the idler pulley, and in the lower groove of the center spindle pulley (Fig. 23).
6. Reconnect the idler arm spring (Fig. 23).

Figure 23

Top View

- | | |
|--------------------------------|---------------------|
| 1. Idler Arm | 4. Idler Arm Spring |
| 2. Center Spindle Pulley | 5. Idler Pulley |
| 3. Outboard Spindle Pulley (2) | 6. Deck Belt |

7. Reinstall the drive belt. Refer to Replacing the Drive Belt, steps 5 and 6 on page 16.
8. Reinstall the deck cover onto the cutting unit, then reinstall and tighten the hand knobs.

Replacing the Drive Belt

Squealing when the belt is rotating, blades slipping when cutting grass, frayed belt edges, burn marks and cracks are signs of a worn drive belt. Replace the drive belt if any of these conditions are evident.

1. Stop the engine, remove the key and disconnect the spark plug wire(s) from the spark plug(s).
2. Remove the hand knobs holding the deck cover to the top of the cutting unit and remove the deck cover.
3. Loosen the jam nuts on each adjusting shaft to loosen the tension on the drive belt.

Figure 24

1. Jam Nuts
2. Adjusting Shaft

4. Remove the worn drive belt (Fig. 25).
5. Install the new drive belt onto the traction unit drive pulley and the top groove of the center spindle pulley (Fig. 25).

m-2545

Figure 25

1. Belt Guide (2)
2. Traction Unit Drive Pulley
3. Drive Belt
4. Center Spindle Pulley

6. Tighten the jam nuts on the adjusting shafts until the springs are compressed to a length of 5" (12.7 cm) (Fig 26).

m-2541

Figure 26

1. 5" between the Spacer and Bushing
2. Jam Nuts

7. Reinstall the deck cover onto the cutting unit, then reinstall and tighten the hand knobs.

Replacing the Castor Wheel Fork Bushings

The castor wheel forks are mounted in bushings pressed into the top and bottom of the carrier frame mounting tubes. To check the bushings, move the castor forks back and forth and side-to-side. If a castor fork is loose, the bushings are worn and must be replaced.

1. Raise the cutting unit so the castor wheels are off the floor, then block up the front of the mower with jack stands.
2. Remove the retaining ring and thrust washer(s) from the top of the castor wheel fork (Fig. 27).
3. Pull the castor wheel fork out of the mounting tube, leaving the thrust washer(s) and spacer on the bottom of the fork. Remember the location of the thrust washers and spacer on each fork to ensure correct installation, and to maintain a level deck.

m-3983

Figure 27

- | | |
|--|----------------------|
| 1. Retaining Ring | 4. Spacer |
| 2. Thrust Washers (locate as required) | 5. Castor Wheel Fork |
| 3. Carrier Frame Mounting Tube | |

4. Insert a pin punch into the mounting tube and carefully drive out the bushings (Fig. 28). Clean the inside of the mounting tube.
 5. Grease the inside and outside of the new bushings. Use a hammer and flat plate to carefully drive the bushings into the mounting tube.
 6. Inspect the castor wheel fork for wear and replace if necessary (Fig. 27).
 7. Slide the castor wheel fork through the bushings in the mounting tube. Replace the thrust washer(s) onto the fork and secure with the retaining ring (Fig. 27).
- IMPORTANT: The inside diameter of the bushings may collapse slightly when installed. If the castor wheel fork does not slide into the new bushings, ream both bushings to an inside diameter of 1.126 in. (28.6mm).**
8. Grease the fitting on the carrier frame mounting tube using No. 2 general purpose lithium base or molybdenum base grease.

m-1076

Figure 28

- | | |
|--------------------------------|------------|
| 1. Carrier Frame Mounting Tube | 2. Bushing |
|--------------------------------|------------|

Servicing the Castor Wheels and Bearings

The castor wheels rotate on a roller bearing supported by a spanner bushing. If the bearing is kept well lubricated, wear will be minimal. Failure to keep the bearing well lubricated will cause rapid wear. A wobbly castor wheel usually indicates a worn bearing.

1. Remove the locknut and wheel bolt holding the castor wheel to the castor fork (Fig. 29).
2. Remove the washers and bushing, then pull the spanner bushing and roller bearing out of the wheel hub (Fig. 29).
3. Remove the other bushing from the wheel hub and clean any grease and dirt from the wheel hub (Fig. 29).
4. Inspect the roller bearing, bushings, spanner bushing and inside of the wheel hub for wear. Replace any defective or worn parts (Fig. 29).
5. To assemble, place one (1) bushing into the wheel hub. Grease the roller bearing and spanner bushing and slide them into the wheel hub. Place the second bushing into the wheel hub (Fig. 29).
6. Install wheel bolt, (2) washers per side, and castor wheel into the castor fork. Secure with locknut and tighten until the spanner bushing bottoms against the inside of the castor forks (Fig. 29).
7. Grease the fitting on the castor wheel.

m-3896

- | | |
|---------------|--------------------|
| 1. Locknut | 4. Bushing |
| 2. Wheel Bolt | 5. Spanner Bushing |
| 3. Washer (4) | 6. Roller Bearing |

Replacing the Grass Deflector

1. Remove the locknuts, bolts and springs holding the deflector mounts to the pivot brackets (Fig. 30).
2. If the pivot brackets need to be replaced, remove the carriage bolts and cone locknuts holding the old brackets to the top of the discharge opening, then install the replacement pivot brackets. Make sure the carriage bolt heads are on the inside of the cutting unit (Fig. 30).
3. Install the deflector mounts onto the pivot brackets with the bolts, springs and locknuts. Make sure the straight ends of the springs are positioned between the deflector mounts and the grass deflector (Fig. 30).
4. Tighten the locknuts until they contact the pivot brackets (Fig. 30).

IMPORTANT: The grass deflector must be spring-loaded in the down position. Lift the deflector up to test that it snaps to the full down position.

Figure 30

| 3. Spring | 7. Locknut |
| 4. Cone Locknut | |

Storage

1. Clean any dirt and chaff from the top of the mower.
2. Scrape any heavy buildup of grass and dirt from the underside of the mower, then wash the mower with a garden hose.
3. Check the condition of the blades. Refer to Cutting Blades on page 10.
4. Check the condition of the drive and deck belts.
5. Check and tighten all bolts, nuts and screws. Repair or replace any part that is damaged or defective.
6. Paint all scratched or bare metal surfaces. Paint is available from your Authorized Service Dealer.
7. Store the machine in a clean, dry garage or storage area. Cover the machine to protect it and keep it clean.

Troubleshooting

PROBLEM	POSSIBLE CAUSES	CORRECTIVE ACTION
Abnormal vibration.	<ol style="list-style-type: none"> 1. Cutting blade(s) is/are bent or unbalanced. 2. Blade mounting bolt is loose. 3. Engine mounting bolts are loose. 4. Loose engine pulley, idler pulley, or blade pulley. 5. Engine pulley is damaged. 6. Blade spindle bent. 	<ol style="list-style-type: none"> 1. Install new cutting blade(s). 2.
