TimeCutter® Riding Mowers

Model No. 74726—Serial No. 400000000 and Up
Model No. 74731—Serial No. 401400000 and Up
Model No. 74760—Serial No. 401400000 and Up
Model No. 74766—Serial No. 401300000 and Up
Model No. 74768—Serial No. 400000000 and Up
Model No. 74775—Serial No. 401300000 and Up
Model No. 74776—Serial No. 402000000 and Up
Model No. 74777—Serial No. 401400000 and Up
Model No. 74778—Serial No. 400000000 and Up
If you are unsure whether or not your machine has been converted for high-altitude use, look for the following label.

NOTE: THE ENGINE ON THIS PRODUCT HAS BEEN MODIFIED FOR USE AT ABOVE 5,000 FEET ELEVATION. IF USING BELOW 5,000 FEET, IT MUST BE REVISED BACK TO ORIGINAL SPECIFICATIONS.

Introduction

This rotary-blade, riding lawn mower is intended to be used by homeowners in residential applications. It is designed primarily for cutting grass on well-maintained lawns. It is not designed for cutting brush, mowing grass and other growth alongside highways, or for agricultural uses.

Read this information carefully to learn how to operate and maintain your product properly and to avoid injury and product damage. You are responsible for operating the product properly and safely.

You may contact Toro directly at www.Toro.com for product safety and operation training materials, accessory information, help finding a dealer, or to register your product.

For the Operator's Manual, the complete warranty details, or to register your product, use the QR code or visit www.Toro.com. You may also call us at 1-888-384-9939 to request a written copy of the product warranty.

Whenever you need service, genuine Toro parts, or additional information, contact an Authorized Service Dealer or Toro Customer Service and have the model and serial numbers of your product ready. Figure 1 identifies the location of the model and serial numbers on the product. Write the numbers in the space provided.

Important: With your mobile device, you can scan the QR code on the serial number decal (if equipped) to access warranty, parts, and other product information.

Write the product model and serial numbers in the space below:

Model No. __________________________________________
Serial No. __________________________________________

This manual identifies potential hazards and has safety messages identified by the safety-alert symbol (Figure 2), which signals a hazard that may cause serious injury or death if you do not follow the recommended precautions.

Figure 2
Safety-alert symbol

This manual uses 2 words to highlight information. Important calls attention to special mechanical information and Note emphasizes general information worthy of special attention.

1. Model and serial number plate
Safety

The following instructions are from ANSI standard B71.1-2012.

General Safety

This product is capable of amputating hands and feet and of throwing objects. Always follow all safety instructions to avoid serious personal injury.

Using this product for purposes other than its intended use could prove dangerous to you and bystanders.

• Do not operate the machine near drop-offs, ditches, embankments, water, or other hazards, or on slopes greater than 15 degrees.

• Use your full attention while operating the machine. Do not engage in any activity that causes distractions; otherwise, injury or property damage may occur

• Read and understand the contents of this Operator’s Manual before starting the engine.

• Do not put your hands or feet near moving components of the machine.

• Do not operate the machine without all guards and other safety protective devices in place and working on the machine.

• Keep children and bystanders out of the operating area. Never allow children to operate the machine.

• Stop the machine, shut off the engine, and remove the key before servicing, fueling, or unclogging the machine.

Improperly using or maintaining this machine can result in injury. To reduce the potential for injury, comply with these safety instructions and always pay attention to the safety-alert symbol, which means Caution, Warning, or Danger—personal safety instruction. Failure to comply with these instructions may result in personal injury or death.

You can find additional safety information where needed throughout this manual.
Slope Indicator

Figure 4
This page may be copied for personal use.

1. The maximum slope you can operate the machine on is 15 degrees. Use the slope chart to determine the degree of slope of hills before operating. **Do not operate this machine on a slope greater than 15 degrees.** Fold along the appropriate line to match the recommended slope.
2. Align this edge with a vertical surface, a tree, building, fence pole, etc.
3. Example of how to compare slope with folded edge
Safety and Instructional Decals

Safety decals and instructions are easily visible to the operator and are located near any area of potential danger. Replace any decal that is damaged or missing.

Battery Symbols
Some or all of these symbols are on your battery.

1. Explosion hazard
2. No fire, open flame, or smoking
3. Caustic liquid/chemical burn hazard
4. Wear eye protection.
5. Read the Operator’s Manual.
6. Keep bystanders a safe distance away from the battery.
7. Wear eye protection; explosive gases can cause blindness and other injuries.
8. Battery acid can cause blindness or severe burns.
9. Flush eyes immediately with water and get medical help fast.
10. Contains lead; do not discard

Manufacturer’s Mark
1. Indicates the blade is identified as a part from the original machine manufacturer.

93-7009
1. Warning—do not operate the mower with the deflector up or removed; keep the deflector in place.
2. Cutting/dismemberment hazard of hand or foot, mower blade—stay away from moving parts.

99-3943
For Models with 127 cm (50 inch), 137 cm (54 inch), or 152 cm (60 inch) Decks
1. Engine

105-7015
For Models with 107 cm (42-inch) Decks
1. Belt routing
106-8717
For Models with 107 cm (42 inch), 127 cm (50 inch), or 137 cm (54 inch) Decks—Not for MyRide Models

1. Read the instructions before servicing or performing maintenance.
2. Check tire pressure every 25 operating hours.
3. Grease every 25 operating hours.
4. Engine

119-8815
1. Parking position
2. Fast
3. Slow
4. Neutral
5. Reverse

112-9840
For Models with 152 cm (60 inch) Mower Decks

1. Read the Operator’s Manual.
2. Height of cut
3. Remove the key and read the instructions before servicing or performing maintenance.

119-8870
For Models with 127 cm (50 inch), 137 cm (54 inch), or 152 cm (60 inch) Decks—Not for MyRide Models

1. Height of cut
2. Parking position
3. Fast
4. Neutral
5. Reverse
6. Slow
For Models with 107 cm (42 inch) Mower Decks or MyRide Suspension System

1. Height of cut
2. 4-1/2 inches
3. 4 inches
4. 3-1/2 inches
5. 3 inches
6. 2-1/2 inches
7. 2 inches
8. 1-1/2 inches
121-0772

For Models with 107 cm (42 inch) or 152 cm (60 inch) Mower Decks or Models with MyRide Suspension System

1. Fast
2. Continuous-variable setting
3. Slow
4. Choke
5. Power takeoff (PTO), Blade-control switch
121-0773
For Models with 127 cm (50 inch) Decks—Not for MyRide Models

1. Fast
2. Continuous-variable setting
3. Slow
4. Choke
5. Power takeoff (PTO), blade-control switch
1. Bypass lever position for pushing the machine
2. Bypass lever position for operating the machine

Models without MyRide Suspension System

1. Trim—slow
2. Tow—medium
3. Mow—fast
For Models with 107 cm (42 inch), 127 cm (50 inch), or 137 cm (54 inch) Decks

**Note:** This machine complies with the industry standard stability test in the static lateral and longitudinal tests with the maximum recommended slope indicated on the decal. Review the instructions for operating the machine on slopes in the Operator’s Manual as well as the conditions in which you would operate the machine to determine whether you can operate the machine in the conditions on that day and at that site. Changes in the terrain can result in a change in slope operation for the machine. If possible, keep the cutting units lowered to the ground while operating the machine on slopes. Raising the cutting units while operating on slopes can cause the machine to become unstable.

2. Warning—before servicing, engage the parking brake, remove the key and the spark plug connection.
3. Cutting hazard of hand, mower blade; pinching hazard of hand, belt—keep hands and feet away from moving parts; keep all guards and shields in place.
4. Thrown object hazard—keep bystanders away from the machine; remove debris from the area before mowing; keep the deflector shield down.
5. Ramp tipping hazard—when loading onto a trailer, do not use dual ramps; use only a single ramp wide enough for the machine and that has an incline less than 15 degrees; back the machine up the ramp (in reverse) and drive it forward off the ramp.
6. Bodily harm hazard—no riders; look behind you when mowing in reverse.
7. Tipping hazard on slopes—do not use on slopes near open water; do not use on slopes greater than 15 degrees.
132-0872

1. Thrown object hazard—keep bystanders away from the machine.

2. Thrown object hazard, raised baffle—do not operate the machine with an open deck; use a bagger or a baffle.

3. Severing hazard of hand or foot—keep away from moving parts.

4. Entanglement hazard—keep away from moving parts; keep all guards and shields in place.

133-9255

For Models with 152 cm (60 inch) Decks

Note: This machine complies with the industry standard stability test in the static lateral and longitudinal tests with the maximum recommended slope indicated on the decal. Review the instructions for operating the machine on slopes in the Operator's Manual as well as the conditions in which you would operate the machine to determine whether you can operate the machine in the conditions on that day and at that site. Changes in the terrain can result in a change in slope operation for the machine. If possible, keep the cutting units lowered to the ground while operating the machine on slopes. Raising the cutting units while operating on slopes can cause the machine to become unstable.

2. Ramp hazard—do not use dual ramps when loading onto a trailer; use 1 ramp wide enough for the machine; use a ramp with a slope less than 15°; back up the ramp when loading the machine and drive forward off the ramp when unloading.

3. Thrown object hazard—keep bystanders a safe distance away from the machine, pick up debris before operating, and keep the deflector shield down.

4. Bodily harm hazard—do not carry passengers; look behind you when mowing in reverse.

5. Tipping hazard—do not use on slopes near open water; do not use on slopes greater than 15°.

6. Cutting and pinch hazard—keep away from moving parts; keep all guards and shields in place.

7. Warning—before performing maintenance, read the Operator's Manual; engage the parking brake, remove the key, and disconnect the spark plug.
136-4245
For Machines with MyRide™

1. Slow
2. Transport
3. Fast

136-5596
For Models with 152 cm (60 inch) Decks or MyRide Suspension System

1. Check the tire pressure every 25 operating hours.
2. Engine oil
3. Check the tire pressure every 25 operating hours.
4. Check the tire pressure every 25 operating hours.
5. Read the Operator’s Manual before performing maintenance.

136-9186
For Models with 152 cm (60 inch) Decks

1. Read the Operator’s Manual before adding weight to the bucket.

137-7044
For Machines with MyRide™

1. Cam lock
2. Cam unlock

138-2456

1. Read the Operator’s Manual.
2. Park the machine on a level surface when filling the fuel tank.
3. Do not overfill the fuel tank.
Product Overview

Controls

Become familiar with all the controls before you start the engine and operate the machine.

Control Panel

Key Switch

The key switch, used to start and shut off the engine, has 3 positions: OFF, RUN, and START. Refer to Starting the Engine (page 24).

Throttle Control

The throttle controls the engine speed, and it has a continuous-variable setting from the SLOW to FAST position (Figure 6).

Choke Control

Use the choke control to start a cold engine.

Blade-Control Switch (Power Takeoff)

The blade-control switch, represented by a power-takeoff (PTO) symbol, engages and disengages power to the mower blades (Figure 6).
Motion-Control Levers

Use the motion-control levers to drive the machine forward, reverse, and turn either direction (Figure 5).

Park Position

Move the motion-control levers outward from the center to the PARK position when exiting the machine (Figure 22). Always position the motion-control levers into the PARK position when you stop the machine or leave it unattended.

Smart Speed™ Control System Lever

The Smart Speed™ Control-System lever, located below the operating position, gives you a choice to drive the machine at 3 speed ranges— trim, tow, and mow (Figure 25).

Fuel-Presence Window

You can use the fuel window, located on the left side of the machine, to verify the presence of fuel in the tank (Figure 7).

Height-of-Cut Lever

Use the height-of-cut lever to lower and raise the deck from the seated position. Moving the lever up (toward you) raises the deck from the ground and moving the lever down (away from you) lowers the deck toward the ground. Adjust the height-of-cut only while the machine is not moving (Figure 27).

Hour Meter (If Equipped)

The hour meter records the number of hours when you are in the seat and the key switch is in the ON position (Figure 8).

Attachments/Accessories

A selection of Toro approved attachments and accessories is available for use with the machine to enhance and expand its capabilities. Contact your Authorized Service Dealer or Distributor or go to www.Toro.com for a list of all approved attachments and accessories.

To best protect your investment and maintain optimal performance of your Toro equipment, count on Toro genuine parts. When it comes to reliability, Toro delivers replacement parts designed to the exact engineering specification of our equipment. For peace of mind, insist on Toro genuine parts.
Operation

Note: Determine the left and right sides of the machine from the normal operating position.

Before Operation

Before Operation Safety

General Safety

• Never allow children or untrained people to operate or service the machine. Local regulations may restrict the age of the operator. The owner is responsible for training all operators and mechanics.
• Become familiar with the safe operation of the equipment, operator controls, and safety signs.
• Know how to stop the machine and shut off the engine quickly.
• Check that operator-presence controls, safety switches, and shields are attached and functioning properly. Do not operate the machine unless they are functioning properly.
• Before mowing, always inspect the machine to ensure that the blades, blade bolts, and cutting assemblies are in good working condition. Replace worn or damaged blades and bolts in sets to preserve balance.
• Inspect the area where you will use the machine and remove all objects that the machine could throw.
• Evaluate the terrain to determine the appropriate equipment and any attachments or accessories required to operate the machine properly and safely.

Fuel Safety

• To avoid personal injury or property damage, use extreme care in handling fuel. Fuel vapors are flammable and explosive.
• Extinguish all cigarettes, cigars, pipes, and other sources of ignition.
• Use only an approved fuel container.
• Do not remove the fuel cap or add fuel to the fuel tank while the engine is running or while hot.
• Do not refuel the machine indoors.
• Do not store the machine or fuel container where there is an open flame, spark, or pilot light, such as on a water heater or on other appliances.
• Do not fill containers inside a vehicle or on a truck or trailer bed with a plastic liner. Always place containers on the ground, away from your vehicle before filling.
• Remove the equipment from the truck or trailer and refuel it while it is on the ground. If this is not possible, then refuel from a portable container rather than a fuel-dispenser nozzle.
• Do not operate the machine without the entire exhaust system in place and in proper working condition.
• Keep the fuel-dispenser nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete. Do not use a nozzle lock-open device.
• If you spill fuel on your clothing, change your clothing immediately. Wipe up any fuel that spills.
• Never overfill the fuel tank. Replace the fuel cap and tighten it securely.
• Store fuel in an approved container and keep it out of the reach of children. Never buy more than a 30-day supply of fuel.
• Do not fill the fuel tank completely full. Add fuel to the fuel tank until the level is 6 to 13 mm (1/4 to 1/2 inch) below the bottom of the filler neck. This empty space in the tank allows fuel to expand.
  – Avoid prolonged breathing of vapors.
  – Keep your face away from the nozzle and fuel tank opening.
  – Avoid contact with skin; wash off spills with soap and water.

Adding Fuel

Recommended Fuel

• For best results, use only clean, fresh (less than 30 days old), unleaded gasoline with an octane rating of 87 or higher ((R+M)/2 rating method).
• Ethanol: Gasoline with up to 10% ethanol (gasohol) or 15% MTBE (methyl tertiary butyl ether) by volume is acceptable. Ethanol and MTBE are not the same. Gasoline with 15% ethanol (E15) by volume is not approved for use. **Never use gasoline that contains more than 10% ethanol by volume**, such as E15 (contains 15% ethanol), E20 (contains 20% ethanol), or E85 (contains up to 85% ethanol). Using unapproved gasoline may cause performance problems and/or engine damage which may not be covered under warranty.
• Do not use gasoline containing methanol.
• Do not store fuel either in the fuel tank or fuel containers over the winter unless you use a fuel stabilizer.
• Do not add oil to gasoline.
Using Stabilizer/Conditioner

Use a fuel stabilizer/conditioner in the machine to provide the following benefits:

• Keeps fuel fresh during storage of 90 days or less (drain the fuel tank when storing the machine for more than 90 days)
• Cleans the engine while it runs
• Eliminates gum-like varnish buildup in the fuel system, which causes hard starting

Important: Do not use fuel additives containing methanol or ethanol.

Add the correct amount of fuel stabilizer/conditioner to the fuel.

Note: A fuel stabilizer/conditioner is most effective when mixed with fresh fuel. To minimize the chance of varnish deposits in the fuel system, use fuel stabilizer at all times.

Filling the Fuel Tank

1. Park the machine on a level surface.
2. Engage the parking brake.
3. Shut off the engine and remove the key.
4. Clean around the fuel-tank cap.
5. Fill the fuel tank to the bottom of the filler neck (Figure 9).

Note: Do not fill the fuel tank completely full. The empty space in the tank allows the fuel to expand.

Performing Daily Maintenance

Before starting the machine each day, perform the Each Use/Daily procedures listed in Maintenance (page 33).

Breaking in a New Machine

New engines take time to develop full power. Mower decks and drive systems have higher friction when new, placing additional load on the engine. Allow 40 to 50 hours of break-in time for new machines to develop full power and best performance.
Using the Safety-Interlock System

**WARNING**
If the safety-interlock switches are disconnected or damaged, the machine could operate unexpectedly, causing personal injury.

- Do not tamper with the interlock switches.
- Check the operation of the interlock switches daily and replace any damaged switches before operating the machine.

Understanding the Safety-Interlock System

The safety-interlock system is designed to prevent the engine from starting unless:
- The blade-control switch (PTO) is disengaged.
- The motion-control levers are in the PARK position.

The safety-interlock system also is designed to shut off the engine whenever the control levers are out of the PARK position and you rise from the seat.

Testing the Safety-Interlock System

Test the safety-interlock system before you use the machine each time. If the safety system does not operate as described below, have an Authorized Service Dealer repair the safety system immediately.

1. Sit on the seat, move the motion-control levers to the center, unlocked position, engage the blade-control switch, and rise slightly from the seat; the engine should shut off.

Positioning the Seat

The seat can move forward and backward. Position the seat where you have the best control of the machine and are most comfortable (Figure 10).

![Figure 10](g027632)

Figure 10
Adjusting the MyRide™ Suspension System

For Machines with the MyRide™ Suspension System

Note: To make adjusting the MyRide™ suspension system easier, pivot the seat forward and install the prop rod to take weight off the shock assemblies.

The MyRide™ suspension system adjusts to provide a smooth and comfortable ride. You can adjust the rear 2-shock assemblies to quickly and easily change the suspension system. Position the suspension system where you are most comfortable.

Adjusting the Rear-Shock Assemblies

The slots for the rear-shock assemblies have detent positions for reference.

The following graphic shows the position for a soft or firm ride and the different detent positions (Figure 11).

- 1. Firmest position
- 2. Softest position
- 3. Detents in the slots

Note: Ensure that the left and right rear-shock assemblies are always adjusted to the same positions.

Adjust the rear-shock assemblies (Figure 12).
Adjusting the Motion-Control Levers

Adjusting the Height
You can adjust the motion-control levers higher or lower for maximum comfort (Figure 13).

Adjusting the Tilt
You can adjust the motion-control levers forward or rearward for your comfort.
1. Loosen the upper bolt holding the control lever to the control-arm shaft.
2. Loosen the lower bolt just enough to pivot the control lever forward or rearward (Figure 13).
3. Tighten both bolts to secure the control lever in the new position.
4. Repeat the adjustment for the other control lever.

During Operation

During Operation Safety

General Safety
• The owner/operator can prevent and is responsible for accidents that may cause personal injury or property damage.
• Wear appropriate clothing, including eye protection; long pants; slip-resistant, substantial footwear; and hearing protection. Tie back long hair and do not wear loose jewelry.
• Do not operate the machine while ill, tired, or under the influence of alcohol or drugs.
• Never carry passengers on the machine and keep bystanders and pets away from the machine during operation.
• Operate the machine only in good visibility to avoid holes or hidden hazards.
• Avoid mowing on wet grass. Reduced traction could cause the machine to slide.
• Ensure that all drives are in neutral, the parking brake is engaged, and you are in the operating position before you start the engine.
• Keep your hands and feet away from the cutting units. Keep clear of the discharge opening at all times.
• Look behind and down before backing up to be sure of a clear path.
• Use care when approaching blind corners, shrubs, trees, or other objects that may obscure your vision.
• Do not mow near drop-offs, ditches, or embankments. The machine could suddenly roll over if a wheel goes over the edge or if the edge gives way.
• Stop the blades whenever you are not mowing.
• Stop the machine, shut off the engine, remove the key, and inspect the blades after striking an object or if there is an abnormal vibration in the machine. Make all necessary repairs before resuming operation.
• Slow down and use caution when making turns and crossing roads and sidewalks with the machine. Always yield the right-of-way.
• Disengage the drive to the cutting unit and shut off the engine before adjusting the height of cut (unless you can adjust it from the operating position).
• Never run an engine in an area where exhaust gases are enclosed.
• Never leave a running machine unattended.
Slope Safety

- Slopes are a major factor related to loss of control and rollover accidents, which can result in severe injury or death. The operator is responsible for safe slope operation. Operating the machine on any slope requires extra caution. Before using the machine on a slope, do the following:
  - Review and understand the slope instructions in the manual and on the machine.
  - Use an angle indicator to determine the approximate slope angle of the area.
  - Never operate on slopes greater than 15 degrees.
  - Evaluate the site conditions of the day to determine if the slope is safe for machine operation. Use common sense and good judgment when performing this evaluation. Changes in the terrain, such as moisture, can quickly affect the operation of the machine on a slope.
  - Identify hazards at the base of the slope. Do not operate the machine near drop-offs, ditches, embankments, water, or other hazards. The machine could suddenly roll over if a wheel goes over the edge or the edge collapses. Keep a safe distance (twice the width of the machine) between the machine and any hazard. Use a walk-behind machine or a hand trimmer to mow the grass in these areas.
  - Avoid starting, stopping, or turning the machine on slopes. Avoid making sudden changes in speed or direction; turn slowly and gradually.
  - Do not operate a machine under any conditions where traction, steering, or stability is in question. Be aware that operating the machine on wet grass, across slopes, or downhill may cause the machine to lose traction. Loss of traction to the drive wheels may result in sliding and a loss of braking and steering. The machine can slide even if the drive wheels are stopped.
  - Remove or mark obstacles such as ditches, holes, ruts, bumps, rocks, or other hidden hazards. Tall grass can hide obstacles. Uneven terrain could overturn the machine.
  - Use extra care while operating with accessories or attachments, such as grass-collection systems. These can change the stability of the machine and cause a loss of control. Follow directions for counterweights.
  - If possible, keep the deck lowered to the ground while operating on slopes. Raising the deck while operating on slopes can cause the machine to become unstable.

• Before leaving the operating position (including to empty the catchers or to unclog the chute), do the following:
  - Stop the machine on level ground.
  - Disengage the power take-off and lower the attachments.
  - Engage the parking brake.
  - Shut off the engine and remove the key.
  - Wait for all moving parts to stop.
• Do not operate the machine when there is the risk of lightning.
• Do not use the machine as a towing vehicle unless it has a hitch installed.
• Do not change the governor speed or overspeed the engine.
• Use only accessories and attachments approved by Toro.
• This machine produces sound levels in excess of 85 dBA at the operator’s ear and can cause hearing loss through extended periods of exposure.

Figure 14

1. Wear hearing protection.
Operating the Mower Blade-Control Switch (PTO)

The blade-control switch (PTO) starts and stops the mower blades and any powered attachments.

Engaging the Blade-Control Switch (PTO)

Note: Always engage the blades with the throttle in the FAST position (Figure 17).

Disengaging the Blade-Control Switch (PTO)

Towing Safety

• Do not attach towed equipment except at the hitch point.

• Follow the attachment manufacturer's recommendation for weight limits for towed equipment and towing on slopes. The towed weight must not exceed the weight of the machine, operator, and ballast. Use counterweights or wheel weights as described in the attachment, or in the towing machine Operator's Manual.

• Never allow children or others near the towed equipment.

• On slopes, the weight of the towed equipment may cause loss of traction, increased risk of rollover, and loss of control. Reduce the towed weight and slow down.

• The stopping distance increases with the weight of a towed load. Travel slowly and allow extra distance to stop.

• Make wide turns to keep the attachment clear of the machine.

Figure 15

1. Safe Zone—use the machine here on slopes less than 15 degrees or flat areas.
2. Danger Zone—use a walk-behind mower and/or a hand trimmer on slopes greater than 15 degrees and near drop-offs or water.
3. Water
4. W=width of the machine
5. Keep a safe distance (twice the width of the machine) between the machine and any hazard.

Towing Safety

• Do not attach towed equipment except at the hitch point.

• Follow the attachment manufacturer's recommendation for weight limits for towed equipment and towing on slopes. The towed weight must not exceed the weight of the machine, operator, and ballast. Use counterweights or wheel weights as described in the attachment, or in the towing machine Operator's Manual.

• Never allow children or others near the towed equipment.

• On slopes, the weight of the towed equipment may cause loss of traction, increased risk of rollover, and loss of control. Reduce the towed weight and slow down.

• The stopping distance increases with the weight of a towed load. Travel slowly and allow extra distance to stop.

• Make wide turns to keep the attachment clear of the machine.
Operating the Throttle
You can move the throttle control between FAST and SLOW positions (Figure 19).
Always use the FAST position when engaging the PTO.

Starting the Engine
Note: A warm or hot engine may not require choking.
Important: Do not engage the starter for more than 5 seconds at a time. Engaging the starter motor for more than 5 seconds can damage the starter motor. If the engine fails to start, wait 10 seconds before operating the engine starter again.

Operating the Choke
Use the choke to start a cold engine.

1. Pull up the choke knob to engage the choke before using the key switch (Figure 20).
   Note: Ensure that you fully engage the choke. You may need to hold the knob up when you use the key switch.
2. Push down the choke to disengage the choke after the engine has started (Figure 20).
Shutting Off the Engine

1. Disengage the blades by moving the blade-control switch to the OFF position (Figure 18).
2. Engage the parking brake; refer to Park Position (page 16).
3. Move the throttle control to the FAST position.
4. Turn the key to the OFF position and remove the key.

⚠️ CAUTION ⚠️
Children or bystanders may be injured if they move or attempt to operate the machine while it is unattended.

Always remove the key and engage the parking brake when leaving the machine unattended.

Using the Motion-Control Levers

![Figure 22](image1)

<table>
<thead>
<tr>
<th>1</th>

<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Motion-control lever—PARK position</td>
<td>Forward</td>
<td>Center, unlocked position</td>
<td>Backward</td>
</tr>
</tbody>
</table>

Driving the Machine

The drive wheels turn independently, powered by hydraulic motors on each axle. You can turn 1 side in reverse while you turn the other forward, causing the machine to spin rather than turn. This greatly improves the machine maneuverability but may require sometime for you to adapt to how it moves.

The throttle control regulates the engine speed as measured in rpm (revolutions per minute). Place the throttle control in the FAST position for best performance. Always operate in the full throttle position when mowing.

⚠️ WARNING ⚠️
The machine can spin very rapidly. You may lose control of the machine and cause personal injury or damage to the machine.

• Use caution when making turns.
• Slow the machine down before making sharp turns.

Driving Forward

Note: Always use caution when backing up and turning.

1. Move the levers to the center, unlocked position.
2. To go forward, slowly push the motion-control levers forward (Figure 23).
Driving Backward
1. Move the levers to the center, unlocked position.
2. To go backward, slowly pull the motion-control levers rearward (Figure 24).

Using the Smart Speed™ Control System
The Smart Speed™ Control-System lever (Figure 25 or Figure 26) gives the operator a choice to drive the machine at 3 ground speed ranges—trim, tow, and mow.

<table>
<thead>
<tr>
<th>Suggested uses</th>
<th>Trim</th>

</tbody>
</table>

Trim
This is the lowest speed. The suggested uses for this speed are as follows:
• Parking
• Heavy, wet grass mowing conditions
• Training
• Trimming grass
This is the medium speed. The suggested uses for this speed are as follows:

- Bagging
- Mulching
- Towing attachments

This is the fastest speed. The suggested uses for this speed are as follows:

- Normal mowing
- Moving the machine

Using the Side Discharge

The mower has a hinged grass deflector that disperses clippings to the side and down toward the turf.

⚠️ DANGER

Without a grass deflector, discharge cover, or a complete grass-catcher assembly mounted in place, you and others are exposed to blade contact and thrown debris. Contact with rotating mower blade(s) and thrown debris will cause injury or death.

- Never remove the grass deflector from the mower deck because the grass deflector routes material down toward the turf. If the grass deflector is ever damaged, replace it immediately.
- Never put your hands or feet under the mower deck.
- Never try to clear the discharge area or mower blades unless you move the blade-control switch (PTO) to the Off position, rotate the key switch to the Off position, and remove the key from the key switch.
- Make sure that the grass deflector is in the down position.

Adjusting the Height of Cut

**Note:** The transport position is the highest height-of-cut position or cutting height at 115 mm (4-1/2 inches) as shown in Figure 27.

Height of cut is controlled by the lever located to the right of the operating position (Figure 27).
Adjusting the Anti-Scalp Rollers

Machines with a 107 cm (42 inch), 127 cm (50 inch), or 137 cm (54 inch) Mower Deck Only

Whenever you change the height of cut, adjust the height of the anti-scalp rollers.

**Note:** Adjust the anti-scalp rollers so that the rollers do not touch the ground in normal, flat mowing areas.

1. Disengage the blade-control switch (PTO), move the motion-control levers to the NEUTRAL-LOCK position, and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Adjust the anti-scalp rollers as shown in Figure 28 to match the closest height-of-cut position.

![Figure 28](image1)

Using Attachments and Accessories

Machines with a 152 cm (60 inch) Mower Deck Only

Use only attachments and accessories approved by Toro.

If you attach a bucket to the engine guard, use a strap to secure it.

**Important:** If you are carrying more than 4.5 kg (10 lb) in a bucket attached to the engine guard, you should equip your machine with the Bucket Support Kit.

Contact your authorized Toro service dealer.

**Machines with a 152 cm (60 inch) Mower Deck Only**

Whenever you change the height of cut, it is recommended to adjust the height of the anti-scalp rollers.

1. Disengage the blade-control switch (PTO), move the motion-control levers to the NEUTRAL-LOCK position, and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Remove the flange nut, anti-scalp roller, and bolt from the bracket (Figure 29).

**Note:** Keep the bolt and anti-scalp roller together when removing.

![Figure 29](image2)

| 1. Flange nut | 4. Bushing |
| 2. Spacer     | 5. Bolt    |
| 3. Anti-scalp roller |            |

4. Align the bolt and anti-scalp roller in the hole of the bracket that matched the closest height-of-cut position (Figure 29).
5. Insert the bolt into the bracket hole and secure the bolt and anti-scalp roller with the flange nut (Figure 29).
Operating Tips

Using the Fast Throttle Setting
For best mowing and maximum air circulation, operate the engine at the FAST position. Air is required to thoroughly cut grass clippings, so do not set the height-of-cut so low as to totally surround the mower deck in uncut grass. Always try to have 1 side of the mower deck free from uncut grass, which allows air to be drawn into the mower deck.

Cutting a Lawn for the First Time
Cut grass slightly longer than normal to ensure that the cutting height of the mower deck does not scalp any uneven ground. However, the cutting height used in the past is generally the best one to use. When cutting grass longer than 15 cm (6 inches) tall, you may want to cut the lawn twice to ensure an acceptable quality of cut.

Cutting a Third of the Grass Blade
It is best to cut only about a third of the grass blade. Cutting more than that is not recommended unless grass is sparse, or it is late fall when grass grows more slowly.

Alternating the Mowing Direction
Alternate the mowing direction to keep the grass standing straight. This also helps disperse clippings, which enhances decomposition and fertilization.

Mowing at Correct Intervals
Grass grows at different rates at different times of the year. To maintain the same cutting height, mow more often in early spring. As the grass growth rate slows in mid summer, mow less frequently. If you cannot mow for an extended period, first mow at a high cutting height, then mow again 2 days later at a lower height setting.

Using a Slower Cutting Speed
To improve cut quality, use a slower ground speed in certain conditions.

Avoiding Cutting Too Low
When mowing uneven turf, raise the cutting height to avoid scalping the turf.

Stopping the Machine
If you must stop the forward motion of the machine while mowing, a clump of grass clippings may drop onto your lawn. To avoid this, move onto a previously cut area with the blades engaged or you can disengage the mower deck while moving forward.

Keeping the Underside of the Mower Deck Clean
Clean clippings and dirt from the underside of the mower deck after each use. If grass and dirt build up inside the mower deck, cutting quality will eventually become unsatisfactory.

Maintaining the Blade(s)
Maintain a sharp blade throughout the cutting season because a sharp blade cuts cleanly without tearing or shredding the grass blades. Tearing and shredding turns grass brown at the edges, which slows growth and increases the chance of disease. Check the mower blades after each use for sharpness, and for any wear or damage. File down any nicks and sharpen the blades as necessary. If a blade is damaged or worn, replace it immediately with a genuine Toro replacement blade.
After Operation

After Operation Safety

General Safety

• Clean grass and debris from the cutting units, mufflers, and engine compartment to help prevent fires. Clean up oil or fuel spills.
• Shut off the fuel and remove the key before storing or transporting the machine.
• Disengage the drive to the attachment whenever you are transporting or not using the machine.
• Allow the engine to cool before storing the machine in any enclosure.
• Never store the machine or fuel container where there is an open flame, spark, or pilot light, such as on a water heater or on other appliances.

Pushing the Machine by Hand

Important: Always push the machine by hand. Do not tow the machine, because towing may damage it.

This machine has an electric-brake mechanism, and to push the machine, the ignition key must be in the RUN position. The battery needs to be charged and functioning to disengage the electric brake.

Pushing the Machine

1. Park the machine on a level surface, disengage the blade-control switch, and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Locate the bypass levers on the frame on both sides of the engine.
4. Move the bypass levers forward through the key hole and down to lock them in place (Figure 30).
   Note: Do this for each lever.
5. Turn the ignition key on and disengage the parking brake.
   Note: Do not start the machine.

Operating the Machine

Move the bypass levers rearward through the keyhole and down to lock them in place as shown in Figure 30.

Note: Do this for each lever.
Transporting the Machine

Use a heavy-duty trailer or truck to transport the machine. Use a full-width ramp. Ensure that the trailer or truck has all the necessary brakes, lighting, and marking as required by law. Please carefully read all the safety instructions. Knowing this information could help you or bystanders avoid injury. Refer to your local ordinances for trailer and tie-down requirements.

⚠️ WARNING

Driving on the street or roadway without turn signals, lights, reflective markings, or a slow-moving-vehicle emblem is dangerous and can lead to accidents, causing personal injury.

Do not drive the machine on a public street or roadway.

Selecting a Trailer

⚠️ WARNING

Loading a machine onto a trailer or truck increases the possibility of tip-over and could cause serious injury or death (Figure 31).

- Use only a full-width ramp; do not use individual ramps for each side of the machine.
- Do not exceed a 15-degree angle between the ramp and the ground or between the ramp and the trailer or truck.
- Ensure that the length of the ramp is at least 4 times as long as the height of the trailer or truck bed to the ground. This ensures that the ramp angle does not exceed 15 degrees on flat ground.

Loading the Machine

⚠️ WARNING

Loading a machine onto a trailer or truck increases the possibility of tip-over and could cause serious injury or death.

- Use extreme caution when operating a machine on a ramp.
- Back the machine up the ramp and drive it forward down the ramp.
- Avoid sudden acceleration or deceleration while driving the machine on a ramp as this could cause a loss of control or a tip-over situation.
1. If using a trailer, connect it to the towing vehicle and connect the safety chains.

2. If applicable, connect the trailer brakes and lights.

3. Lower the ramp, ensuring that the angle between the ramp and the ground does not exceed 15 degrees (Figure 31).

4. Back the machine up the ramp (Figure 32).

![Figure 32](image)

5. Shut off the engine, remove the key, and engage the parking brake.

6. Tie down the machine near the front caster wheels and the rear bumper with straps, chains, cable, or ropes (Figure 33). Refer to local regulations for tie-down requirements.

![Figure 33](image)

**Unloading the Machine**

1. Lower the ramp, ensuring that the angle between the ramp and the ground does not exceed 15 degrees (Figure 31).

2. Drive the machine forward down the ramp (Figure 32).
Maintenance

Note: Determine the left and right sides of the machine from the normal operating position.

Recommended Maintenance Schedule(s)

<table>
<thead>
<tr>
<th>Maintenance Service Interval</th>
<th>Maintenance Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>After the first 5 hours</td>
<td>• Change the engine oil and filter.</td>
</tr>
</tbody>
</table>
| Before each use or daily     | • Check the safety-interlock system.  
                                  • Check the air cleaner for dirty, loose, or damaged parts.  
                                  • Check the engine-oil level.  
                                  • Clean the air intake screen.  
                                  • Inspect the blades.  
                                  • Inspect the grass deflector for damage. |
| After each use                | • Clean the mower-deck housing. |
| Every 25 hours                | • Grease all lubrication points (non-MyRide models only).  
                                  • Clean the air-cleaner foam element (more often in dusty, dirty conditions).  
                                  • Check tire pressure. |
| Every 100 hours               | • Replace the air-cleaner foam element (more often in dusty, dirty conditions).  
                                  • Clean the paper air-cleaner element (more often in dirty or dusty conditions).  
                                  • Change the engine oil and oil filter (more often in dirty or dusty conditions).  
                                  • Check the spark plug(s).  
                                  • Check the in-line fuel filter. |
| Every 200 hours               | • Replace the paper air-cleaner element (more often in dirty or dusty conditions).  
                                  • Replace the spark plug(s).  
                                  • Replace the in-line fuel filter. |
| Before storage                | • Charge the battery and disconnect the battery cables.  
                                  • Perform all maintenance procedures listed above before storage.  
                                  • Paint any chipped surfaces. |

⚠️ CAUTION ⚠️

If you leave the key in the switch, someone could accidentally start the engine and seriously injure you or other bystanders.

Shut off the engine and remove the key from the switch before you perform any maintenance.
**Pre-Maintenance Procedures**

**Maintenance Safety**
- Before repairing the machine do the following:
  - Disengage the drives.
  - Engage the parking brake.
  - Shut off the engine and remove the key.
  - Disconnect the spark-plug wire.
- Park the machine on a level surface.
- Clean grass and debris from the cutting unit, drives, mufflers, and engine to help prevent fires.
- Clean up oil or fuel spills.
- Do not allow untrained personnel to service the machine.
- Use jack stands to support the machine and/or components when required.
- Carefully release pressure from components with stored energy.
- Disconnect the battery or remove the spark-plug wire before making any repairs. Disconnect the negative terminal first and the positive terminal last. Connect the positive terminal first and negative last.
- Use care when checking the blades. Wrap the blade(s) or wear thickly padded gloves, and use caution when servicing them. Only replace blades; do not straighten or weld them.
- Keep your hands and feet away from moving parts. If possible, do not make adjustments with the engine running.
- Keep all parts in good working condition and all hardware tightened, especially the blade-attachment bolts. Replace all worn or damaged decals.
- Never interfere with the intended function of a safety device or reduce the protection provided by a safety device. Check their proper operation regularly.
- To ensure optimum performance and continued safety certification of the machine, use only genuine Toro replacement parts and accessories. Replacement parts and accessories made by other manufacturers could be dangerous, and such use could void the product warranty.
- Check the parking brake operation frequently. Adjust and service as required.

**Raising the Seat**
Ensure that the parking brake is engaged. Lift the seat forward.

You can access following components by raising the seat:
- Serial plate
- Service decal
- Seat-adjustment bolts (if applicable)
- Fuel filter
- Battery and battery cables
Lubrication

Greasing the Bearings
All Models without MyRide

**Service Interval:** Every 25 hours—Grease all lubrication points (non-MyRide models only).

**Grease Type:** No. 2 lithium grease

1. Disengage the blade-control switch (PTO), move the motion-control levers to the NEUTRAL-LOCK position, and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Clean the grease fittings (Figure 34 and Figure 35) with a rag.

**Note:** Make sure to scrape any paint off the front of the fitting(s).

![Figure 34](g032432)

**Figure 34**

1. Front caster tire

**Figure 35**

Located on the seat-pan underside

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

1. Read the instructions before servicing or performing maintenance.
2. Check the tire pressure every 25 operating hours.
3. Grease every 25 operating hours.
4. Engine

![Figure 35](decalf016-5717)

Engine Maintenance

Engine Safety

- Shut off the engine before checking the oil or adding oil to the crankcase.
- Keep your hands, feet, face, clothing, and other body parts away the muffler and other hot surfaces.

Servicing the Air Cleaner

**Service Interval:** Before each use or daily

**Note:** Service the air cleaner more frequently (every few hours) if operating conditions are extremely dusty or sandy.

Removing the Foam and Paper Elements

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Clean around the air-cleaner cover to prevent dirt from getting into the engine and causing damage.
4. Lift the cover and rotate the air-cleaner assembly out of the engine (Figure 36).
Servicing the Foam Air-Cleaner Element

Service Interval: Every 25 hours/Monthly (whichever comes first)—Clean the air-cleaner foam element (more often in dusty, dirty conditions).

Every 100 hours/Yearly (whichever comes first)—Replace the air-cleaner foam element (more often in dusty, dirty conditions).

1. Wash the foam element in liquid soap and warm water. When the element is clean, rinse it thoroughly.
2. Dry the element by squeezing it in a clean cloth.

Important: Replace the foam element if it is torn or worn.

Servicing the Paper Air-Cleaner Element

Service Interval: Every 100 hours—Clean the paper air-cleaner element (more often in dirty or dusty conditions).

Every 200 hours—Replace the paper air-cleaner element (more often in dirty or dusty conditions).

1. Clean the paper element by tapping it gently to remove dust.

Note: If it is very dirty, replace the paper element with a new one.

2. Inspect the element for tears, an oily film, or damage to the rubber seal.
3. Replace the paper element if it is damaged.

Important: Do not clean the paper filter.

---

5. Separate the foam and paper elements (Figure 37).
Installing the Air Cleaner
1. Install the foam element over the paper element.
   Note: Ensure that you do not damage the elements.
2. Align the holes of the filter into the manifold ports.
3. Rotate the filter down into the chamber and fully seat it against the manifold (Figure 38).
4. Close the cover.

Servicing the Engine Oil

Engine-Oil Specifications
Oil Type: Detergent oil (API service SF, SG, SH, SJ, or SL)
Crankcase Capacity: 2.4 L (81 fl oz) with oil filter
Viscosity: See the table below.

![Viscosity Chart](image)

Checking the Engine-Oil Level
Service Interval: Before each use or daily
Note: Check the oil when the engine is cold.
Important: If you overfill or underfill the engine crankcase with oil and run the engine, you may damage the engine.

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
   Note: Ensure that the engine is cool so that the oil has had time to drain into the sump.
3. To keep dirt, grass clippings, etc., out of the engine, clean the area around the oil-fill cap and dipstick before removing it (Figure 40).
Changing the Engine Oil and Oil Filter

Service Interval: After the first 5 hours/After the first month (whichever comes first)—Change the engine oil and filter.

Every 100 hours/Yearly (whichever comes first)—Change the engine oil and oil filter (more often in dirty or dusty conditions).

1. Park the machine on a level surface to ensure that the oil drains completely.
2. Disengage the blade-control switch (PTO) and engage the parking brake.
3. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
4. Drain the oil from the engine.
5. Change the engine-oil filter (Figure 42).

**Note:** Ensure that the oil-filter gasket touches the engine and then turn the filter an extra 3/4 turn.

6. Slowly pour approximately 80% of the specified oil into the filler tube and slowly add the additional oil to bring it to the Full mark (Figure 43).

7. Dispose of the used oil at a recycling center.

### Servicing the Spark Plug

**Service Interval:** Every 100 hours/Yearly (whichever comes first)—Check the spark plug(s).

Every 200 hours/Every 2 years (whichever comes first)—Replace the spark plug(s).

Ensure that the air gap between the center and side electrodes is correct before installing the spark plug. Use a spark plug wrench for removing and installing the spark plug and a gapping tool or feeler gauge to check and adjust the air gap. Install a new spark plug if necessary.

**Type:** Champion® RN9YC or NGK® BPR6ES

**Air gap:** 0.76 mm (0.03 inch)
Removing the Spark Plug

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.

2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

3. Clean the area around the base of the plug to keep dirt and debris out of the engine.

4. Remove the spark plug (Figure 44).

![Figure 44](g027478)

---

Checking the Spark Plug

*Important:* Do not clean the spark plug(s). Always replace the spark plug(s) when it has a black coating, worn electrodes, an oily film, or cracks.

If you see light brown or gray on the insulator, the engine is operating properly. A black coating on the insulator usually means the air cleaner is dirty.

Set the gap to 0.75 mm (0.03 inch).

![Figure 45](g206628)

---

Installing the Spark Plug

![Figure 46](g27960)

**Figure 46**

---

Cleaning the Cooling System

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.

2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

3. Remove the air filter from the engine.

4. Remove the engine shroud.

5. To prevent debris entering the air intake, install the air filter to the filter base.

6. Clean debris and grass from the parts.

7. Remove the air filter and install the engine shroud.

8. Install the air filter.
Fuel System Maintenance

⚠️ DANGER ⚠️

In certain conditions, fuel is extremely flammable and highly explosive. A fire or explosion from fuel can burn you, others, and can damage property.

- Perform any fuel-related maintenance when the engine is cold. Do this outdoors in an open area. Wipe up any fuel that spills.
- Never smoke when draining fuel, and stay away from an open flame or where a spark may ignite the fuel fumes.

Replacing the In-Line Fuel Filter

Service Interval: Every 100 hours/Yearly (whichever comes first)—Check the in-line fuel filter.

Every 200 hours/Every 2 years (whichever comes first)—Replace the in-line fuel filter.

Never install a dirty filter after removing it from the fuel line.

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

Electrical System Maintenance

Electrical System Safety

- Disconnect the battery before repairing the machine. Disconnect the negative terminal first and the positive last. Connect the positive terminal first and the negative last.
- Charge the battery in an open, well-ventilated area, away from sparks and flames. Unplug the charger before connecting or disconnecting the battery. Wear protective clothing and use insulated tools.

---

**WARNING**

CALIFORNIA
Proposition 65 Warning
Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Wash hands after handling.

---

Servicing the Battery

Removing the Battery

**WARNING**

Battery terminals or metal tools could short against metal machine components, causing sparks. Sparks can cause the battery gasses to explode, resulting in personal injury.
- When removing or installing the battery, do not allow the battery terminals to touch any metal parts of the machine.
- Do not allow metal tools to short between the battery terminals and metal parts of the machine.

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Raise the seat to access the battery.
4. Disconnect the negative (black) ground cable from the battery post (Figure 48).
   **Note:** Retain all fasteners.

---

**WARNING**

Incorrectly removing the cables from battery could damage the machine and cables, causing sparks. Sparks can cause the battery gasses to explode, resulting in personal injury.
- Always disconnect the negative (black) battery cable before disconnecting the positive (red) cable.
- Always connect the positive (red) battery cable before connecting the negative (black) cable.

5. Slide the rubber cover off the positive (red) cable.
6. Disconnect the positive (red) cable from the battery post (Figure 48).
   **Note:** Retain all fasteners.
7. Remove the battery hold-down (Figure 48), and lift the battery from the battery tray.
Charging the Battery

Service Interval: Before storage—Charge the battery and disconnect the battery cables.

1. Remove the battery from the chassis; refer to Removing the Battery (page 42).

2. Charge the battery for a minimum of 1 hour at 6 to 10 A.

   **Note:** Do not overcharge the battery.

3. When the battery is fully charged, unplug the charger from the electrical outlet, then disconnect the charger leads from the battery posts (Figure 49).

![Figure 49](image)

   1. Positive (+) battery post
   2. Negative (–) battery post
   3. Red (+) charger lead
   4. Black (–) charger lead

Installing the Battery

1. Position the battery in the tray (Figure 48).

2. Using the fasteners previously removed, install the positive (red) battery cable to the positive (+) battery terminal.

3. Using the fasteners previously removed, install the negative battery cable to the negative (-) battery terminal.

4. Slide the red terminal boot onto the positive (red) battery post.

5. Secure the battery with the hold-down (Figure 48).

6. Lower the seat.

Servicing the Fuses

The electrical system is protected by fuses. It requires no maintenance; however, if a fuse blows, check the component/circuit for a malfunction or short.

**Fuse type:**
- Main—F1 (30 A, blade-type)
- Charge Circuit—F2 (25 A, blade-type)

1. Remove the screws securing the control panel to the machine.

   **Note:** Retain all fasteners.

2. Lift the control pane up to access the main wire harness and fuse block (Figure 50).

3. To replace a fuse, pull out the fuse to remove it (Figure 50).

![Figure 50](image)

   1. Main (30 A)
   2. Charge circuit (25 A)

4. Return the control panel to its original position.

   **Note:** Use the screws removed previously to secure the panel to the machine.
Drive System
Maintenance

Checking the Tire Pressure

Service Interval: Every 25 hours—Check tire pressure.

Maintain the air pressure in the front and rear tires as specified. Uneven tire pressure can cause uneven cut. Check the pressure at the valve stem (Figure 51). Check the tires when they are cold to get the most accurate pressure reading.

Refer to the maximum pressure suggested by the tire manufacturer on the sidewall of the caster wheel tires.

For machines with 42-inch or 50-inch decks, inflate the rear drive wheel tires to 90 kPa (13 psi).

For machines with 54-inch or 60-inch decks, inflate the front casters and rear drive wheel tires to 103 kPa (15 psi).

Releasing the Electric Brake

You can manually release the electric brake by rotating the link arms forward. Once the electric brake is energized, the brake resets.

1. Turn the key to the OFF position or disconnect the battery.
2. Locate the shaft on the electric brake where the brake link arms are connected (Figure 52).
3. Rotate the shaft forward to release the brake.

Figure 52

1. Brake-link arm on the electric brake control module
2. Left, rear tire

1. Valve stem
Belt Maintenance

Replacing the Mower-Deck Belt

The signs of a worn belt include squealing while the belt is rotating, blades slipping while cutting grass, and frayed edges, burn marks, and cracks on the belt. Replace the mower belt if any of these conditions are evident.

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Set the height-of-cut at the lowest cutting position of 38 mm (1-1/2 inches).
4. Remove the pulley covers (Figure 53).

5. Using a spring-removal tool, (Toro Part No. 92-5771), remove the idler spring from the deck hook to remove tension on the idler pulley, and roll the belt off the pulleys (Figure 54 and Figure 55).

**WARNING**
The spring is under tension when installed and can cause personal injury.
Be careful when removing the belt.

6. Route the new belt around the engine pulley and mower pulleys (Figure 55).

5. Engine pulley
6. Spring-removal tool

---

45
7. Using a spring-removal tool, install the idler spring over the deck hook, and place tension on the idler pulley and mower belt (Figure 54 and Figure 55).

8. Install the pulley covers.

---

**Mower Maintenance**

**Servicing the Cutting Blades**

To ensure a superior quality of cut, keep the blades sharp. For convenient sharpening and replacement, keep extra blades on hand.

**Blade Safety**

A worn or damaged blade can break, and a piece of the blade could be thrown toward you or bystanders, resulting in serious personal injury or death. Trying to repair a damaged blade may result in discontinued safety certification of the product.

- Inspect the blades periodically for wear or damage.
- Use care when checking the blades. Wrap the blades or wear gloves, and use caution when servicing the blades. Only replace or sharpen the blades; never straighten or weld them.
- On multi-bladed machines, take care as rotating 1 blade can cause other blades to rotate.

**Before Inspecting or Servicing the Blades**

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and disconnect the spark-plug wires from the spark plugs.

**Inspecting the Blades**

**Service Interval:** Before each use or daily

1. Inspect the cutting edges (Figure 56).
2. If the edges are not sharp or have nicks, remove and sharpen the blade; refer to Removing the Blades (page 48).
3. Inspect the blades, especially in the curved area.
4. If you notice any cracks, wear, or a slot forming in this area, immediately install a new blade (Figure 56).
Checking for Bent Blades

**Note:** The machine must be on a level surface for the following procedure.

1. Raise the mower deck to the highest height-of-cut position.

2. While wearing thickly padded gloves, or other adequate hand protection, slowly rotate the blade into a position that allows you to measure the distance between the cutting edge and the level surface the machine is on (Figure 57).

3. Measure from the tip of the blade to the flat surface (Figure 58).

4. Rotate the same blade 180 degrees so that the opposing cutting edge is now in the same position (Figure 59).

5. Measure from the tip of the blade to the flat surface (Figure 60).

**Note:** The variance should be no more than 3 mm (1/8 inch).
1. Opposite blade edge (in position for measuring)
2. Level surface
3. Second measured distance between blade and surface (B)

A. If the difference between A and B is greater than 3 mm (1/8 inch), replace the blade with a new blade; refer to Removing the Blades (page 48) and Installing the Blades (page 49).

Note: If a bent blade is replaced with a new blade, and the dimension obtained continues to exceed 3 mm (1/8 inch), the blade spindle could be bent. Contact an Authorized Service Dealer for service.

B. If the variance is within constraints, move to the next blade.

6. Repeat this procedure on each blade.

Removing the Blades
Replace the blades if they hit a solid object, or if the blade is out of balance or bent.

1. Hold the blade end using a rag or thickly padded glove.
2. Remove the blade bolt, curved washer, and blade from the spindle shaft (Figure 61).

Sharpening the Blades
1. Use a file to sharpen the cutting edge at both ends of the blade (Figure 62).

Note: Maintain the original angle.

Note: The blade retains its balance if the same amount of material is removed from both cutting edges.

2. Check the balance of the blade by putting it on a blade balancer (Figure 63).

Note: If the blade stays in a horizontal position, the blade is balanced and can be used.

Note: If the blade is not balanced, file some metal off the end of the sail area only (Figure 62).

3. Repeat this procedure until the blade is balanced.
Installing the Blades

1. Install the blade onto the spindle shaft (Figure 61).

   **Important:** The curved part of the blade must be pointing upward toward the inside of the mower to ensure proper cutting.

2. Install the curved washer (cupped side toward the blade) and the blade bolt (Figure 61).

3. Torque the blade bolt to 47 to 88 N·m (35 to 65 ft-lb).

Leveling the Mower Deck

Check to ensure that the mower deck is level any time you install the mower or when you see an uneven cut on your lawn.

Check the mower deck for bent blades prior to leveling, and remove and replace any bent blades; refer to the **Servicing the Cutting Blades (page 46)** before continuing.

Level the mower deck side-to-side first; then you can adjust the front-to-rear slope.

**Requirements:**

- The machine must be on a level surface.
- All tires must be properly inflated; refer to **Checking the Tire Pressure (page 44)**.

Leveling from Side to Side

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.

2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

3. Set the height-of-cut lever to the middle position.

4. Carefully rotate the blades so that they are all side to side (Figure 64 and Figure 65).

   ![Figure 64](g009682)

   **Figure 64**
   
   Mower Decks with 2 Blades
   
   1. Blades side to side
   2. Sail area of the blade
   3. Outside cutting edges
   4. Measure from the tip of the blade to the flat surface here.

   ![Figure 65](g005278)

   **Figure 65**
   
   Mower Decks with 3 Blades
   
   1. Blades side to side
   2. Sail area of the blade
   3. Outside cutting edges
   4. Measure from the tip of the blade to the flat surface here.

   ![Figure 66](g009682)

   5. Measure between the outside cutting edges and the flat surface (Figure 64 and Figure 65).

   **Note:** If both measurements are not within 5 mm (3/16 inch), an adjustment is required; continue with this procedure.

6. Move to the left side of the machine.

7. Loosen the side locking nut.

8. Raise or lower the left side of the mower deck by rotating the rear nut (Figure 66).

   **Note:** Rotate the rear nut clockwise to raise the mower deck; rotate the rear nut counter-clockwise to lower the mower deck (Figure 66).
9. Check the side-to-side adjustments again. Repeat this procedure until the measurements are correct.

10. Continue leveling the mower deck by checking the front-to-rear blade slope; refer to Adjusting the Front-to-Rear Blade Slope (page 50).

### Adjusting the Front-to-Rear Blade Slope

Check the front-to-rear blade level any time you install the mower. If the front of the mower is more than 7.9 mm (5/16 inch) lower than the rear of the mower, adjust the blade level using the following instructions:

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.

2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

3. Set the height-of-cut lever to the middle position.

   **Note:** Check and adjust the side-to-side blade level if you have not checked the setting; refer to Leveling from Side to Side (page 49).

4. Carefully rotate the blades so they are facing front to rear (Figure 67 and Figure 68).

5. Measure from the tip of the front blade to the flat surface, and the tip of the rear blade to the flat surface (Figure 67 and Figure 68).

   **Note:** If the front blade tip is not 1.6 to 7.9 mm (1/16 to 5/16 inch) lower than the rear blade tip, adjust the front locknut for 42-inch, 50-inch, and 54-inch decks; adjust the 2 front locknuts the same amount for 60-inch decks.

6. **For 42-inch, 50-inch, and 54-inch mower decks,** adjust the front-to-rear blade slope as follows:

   A. Rotate the adjustment nut in the front of the mower (Figure 69).

   B. To raise the front of the mower, tighten the adjustment nut.

   C. To lower the front of the mower, loosen the adjustment nut.

   D. After adjustment, check the front-to-rear slope again, continue adjusting the nut until the front blade tip is 1.6 to 7.9 mm (1/16
to 5/16 inch) lower than the rear blade tip (Figure 67 and Figure 68).

Figure 69

1. Adjusting rod 3. Locknut
2. Adjusting block

7. **For 60-inch mower decks**, adjust the front-to-rear blade slope as follows:
   A. Loosen the adjustment nut on the left adjusting rod (Figure 66).
   B. To raise the front of the mower, tighten the adjustment nut on the right adjusting rod.
   C. To lower the front of the mower, loosen the adjustment nut on the right adjusting rod.
   D. Tighten the adjustment nut on the left adjustment rod so that there is tension on the left deck rod.

8. When the front-to-rear blade slope is correct, check the side-to-side level of the mower again, refer to Leveling from Side to Side (page 49).

**Removing the Mower Deck**

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Lower the height-of-cut lever to the lowest position.
4. Remove the hairpin cotter from the front support rod and remove the rod from the deck bracket (Figure 70).

**Note:** For 60-inch decks, remove the 2 hairpin cotters from the front support rods and remove the 2 rods from the deck bracket.

Figure 70

1. Front support rod 3. Deck bracket
2. Locking nut

5. Carefully lower the front of the mower deck to the ground.
6. For 60-inch decks, remove the 2 deck-lift springs (Figure 70).

Figure 71

1. Deck-lift spring (2) 2. Rear lift rod

7. Lift the mower deck and hanger brackets clear of the rear lift rod and lower the mower carefully to the ground (Figure 72).
Replacing the Grass Deflector
Machines with Fabricated Mower Decks Only

Service Interval: Before each use or daily—Inspect the grass deflector for damage.

**WARNING**
An uncovered discharge opening could allow the machine to throw objects toward you or bystanders, resulting in serious injury. Also, contact with the blade could occur.

Never operate the machine without the grass deflector, the discharge cover, or the grass-collection system in place.

1. Disengage the spring from the notch in the deflector bracket and slide the rod out of the welded deck brackets, spring, and discharge deflector (Figure 73).

Installing the Mower

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Slide the mower under the machine.
4. Lower the height-of-cut lever to the lowest position.
5. Lift the rear of the mower deck and guide the hanger brackets over the rear lift rod (Figure 72).
6. For 60-inch decks, install the 2 deck-lift springs (Figure 71).
7. Attach the front support rod to the mower deck with the clevis pin and hairpin cotter (Figure 70).
   **Note:** For 60-inch decks, attach the 2 front support rods to the mower deck with the 2 clevis pins and 2 hairpin cotters.
8. Install the mower belt onto the engine pulley.
1. Rod
2. Spring
3. Deflector
4. Deck brackets
5. Spring installed over the rod

2. Remove the damaged or worn discharge deflector.
3. Position the new discharge deflector with the bracket ends between the welded brackets on the deck as shown in Figure 74.
4. Install the spring onto the straight end of the rod.
5. Position the spring on the rod as shown in so the shorter spring end is coming from under the rod before the bend and going over the rod as it returns from the bend.
6. Lift the loop end of the spring and place it into the notch on the deflector bracket (Figure 74).

7. Secure the rod and spring assembly by twisting it so the short end of the rod is placed behind the front bracket welded to the deck (Figure 74).

**Important:** The grass deflector must be spring loaded in the down position. Lift the deflector up to test that it snaps to the full down position.

---

**Replacing the Grass Deflector**

**Machines with Stamped Mower Decks Only**

![Figure 74](image)

1. Rod and spring assembly installed
2. Loop end of the spring installed into the notch in the deflector bracket
3. Rod, short end, moved behind mower bracket
4. Short end, retained by mower bracket.

An uncovered discharge opening could allow the machine to throw objects toward you or bystanders, resulting in serious injury. Also, contact with the blade could occur.

Never operate the machine without the grass deflector, the discharge cover, or the grass-collection system in place.
Inspect the grass deflector for damage before each use. Replace any damaged parts before use.

1. Remove the nut (3/8 inch) from the rod under the mower (Figure 75).

![Figure 75](image1)

2. Slide the rod out of the short standoff, the spring, and the grass deflector (Figure 75).
3. Remove the damaged or worn grass deflector.
4. Replace the grass deflector (Figure 75).
5. Slide the rod (straight end), through the rear-grass-deflector bracket.
6. Place the spring on the rod, with the end wires down and between the grass deflector brackets.
7. Slide rod through the second grass-deflector bracket (Figure 75).
8. Insert the rod at the front of the grass deflector into the short standoff on the deck.
9. Secure the rear end of the rod into the mower with a nut (3/8 inch) as shown in Figure 75.

**Important:** The grass deflector must be spring loaded and in the down position. Lift the deflector up to test that it snaps to the full down position.

---

### Cleaning

#### Washing the Underside of the Mower Deck

**Service Interval:** After each use—Clean the mower-deck housing.

**Important:** You can wash the machine with a mild detergent and water. Do not pressure wash the machine. Avoid excessive use of water, especially near the control panel, under the seat, around the engine, hydraulic pumps, and motors.

Wash the underside of the mower deck after each use to prevent grass buildup for improved mulch action and clipping dispersal.

1. Park the machine on a level surface, disengage the blade-control switch (PTO), and engage the parking brake.
2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
3. Attach the hose coupling to the end of the mower washout fitting, and turn the water on high (Figure 76).

**Note:** Spread petroleum jelly on the washout fitting O-ring to make the coupling slide on easier and protect the O-ring.

![Figure 76](image2)

1. Washout fitting
2. Hose
3. O-ring
4. Coupling

---

4. Lower the mower to the lowest height-of-cut.
5. Sit on the seat and start the engine.
6. Engage the blade-control switch and let the mower run for 1 to 3 minutes.
7. Disengage the blade-control switch, shut off the engine, remove the key, and wait for all moving parts to stop.

---

54
8. Turn the water off and remove the coupling from the washout fitting.

**Note:** If the mower is not clean after 1 washing, soak it and let it stand for 30 minutes. Then repeat the process.

9. Run the mower again for 1 to 3 minutes to remove excess water.

---

**WARNING**

A broken or missing washout fitting could expose you and others to thrown objects or blade contact. Contact with a blade or thrown debris can cause injury or death.

- Replace broken or missing washout fitting immediately, before using machine again.
- Never put your hands or feet under the mower or through openings in the machine.

---

**Cleaning the Suspension System**

**Note:** Do not clean the shock assemblies with pressurized water (Figure 77).

---

**Disposing of Waste**

Engine oil, batteries, hydraulic fluid, and engine coolant are pollutants to the environment. Dispose of these according to your state and local regulations.

---

**Storage**

**Storage Safety**

- Let the engine cool before storing the machine.
- Do not store the machine or fuel near flames or drain the fuel indoors.

---

**Cleaning and Storage**

1. Disengage the blade-control switch (PTO), and engage the parking brake.

2. Shut off the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

3. Remove grass clippings, dirt, and grime from the external parts of the entire machine, especially the engine and hydraulic system. Clean dirt and chaff from the outside of the engine cylinder head fins and blower housing.

**Important:** You can wash the machine with mild detergent and water. Do not pressure wash the machine. Avoid excessive use of water, especially near the control panel, engine, hydraulic pumps, and motors.

4. Check the parking brake operation; refer to **Releasing the Electric Brake** (page 44).

5. Service the air cleaner; refer to **Servicing the Air Cleaner** (page 35).

6. Grease the machine; refer to **Lubrication** (page 35).

7. Change the crankcase oil; refer to **Changing the Engine Oil and Oil Filter** (page 38).

8. Check the tire pressure; refer to **Checking the Tire Pressure** (page 44).

9. Charge the battery; refer to **Charging the Battery** (page 43).

10. Scrape any heavy buildup of grass and dirt from the underside of the mower, then wash the mower with a garden hose.

**Note:** Run the machine with the blade-control switch (PTO) engaged and the engine at high idle for 2 to 5 minutes after washing.

11. Check the condition of the blades; refer to **Servicing the Cutting Blades** (page 46).

12. Prepare the machine for storage when non-use occurs over 30 days. Prepare the machine for storage as follows:

A. Add a petroleum-based stabilizer/conditioner to fuel in the tank. Follow mixing instructions from the stabilizer manufacturer. Do not use
an alcohol-based stabilizer (ethanol or methanol).

**Note:** A fuel stabilizer/conditioner is most effective when mixed with fresh fuel and used at all times.

B. Run the engine to distribute conditioned fuel through the fuel system (5 minutes).

C. Shut off the engine, allow it to cool, and drain the fuel tank.

D. Start the engine and run it until it stops.

E. Dispose of fuel properly. Recycle the fuel according to local codes.

**Important:** Do not store stabilizer/conditioned fuel over 90 days.

13. Remove and check the condition of the spark plug(s); refer to **Servicing the Spark Plug** (page 39). With the spark plug(s) removed from the engine, pour 30 ml (2 tablespoons) of engine oil into the spark plug hole. Use the starter to crank the engine and distribute the oil inside the cylinder. Install the spark plug(s). Do not install the wire on the spark plug(s).

14. Check and tighten all bolts, nuts, and screws. Repair or replace any part that is damaged.

15. Paint all scratched or bare metal surfaces. Paint is available from your Authorized Service Dealer.

16. Store the machine in a clean, dry garage or storage area. Remove the key from the switch and keep it out of reach of children or other unauthorized users. Cover the machine to protect it and keep it clean.

### Storing the Battery

1. Fully charge the battery.

2. Let the battery rest for 24 hours, then check the battery voltage.

   **Note:** If the battery voltage is below 12.6 V, repeat steps 1 and 2.

3. Disconnect the cables from the battery.

4. Check the voltage periodically to ensure that the voltage is 12.4 V or higher.

   **Note:** If the battery voltage is below 12.4 V, repeat steps 1 and 2.

### Battery Storage Tips

- Store the battery in a cool, dry area in an upright position.
- Do not stack batteries directly on top of each other, unless they are in cartons.
- Do not stack more than 3 batteries (only 2 if the battery type is commercial).
- Test a wet battery every 4 to 6 months and charge it, if necessary.
- Always test and charge the battery before installation.
# Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
</table>
| The engine overheats. | 1. The engine load is excessive.  
2. The oil level in the crankcase is low.  
3. The cooling fins and air passages under the engine blower housing are plugged.  
4. The air cleaner is dirty.  
5. Dirt, water, or stale fuel is in the fuel system. | 1. Reduce the ground speed.  
2. Add oil to the crankcase.  
3. Remove the obstruction from the cooling fins and air passages.  
4. Clean or replace the air-cleaner element.  
5. Contact an Authorized Service Dealer. |
| The starter does not crank. | 1. The blade-control switch is engaged.  
2. The motion-control levers are not in the PARK position.  
3. The battery is dead.  
4. The electrical connections are corroded or loose.  
5. A fuse is blown.  
6. A relay or switch is damaged. | 1. Move the blade-control switch to Disengaged.  
2. Move the motion-control levers outward to the PARK position.  
3. Charge the battery.  
4. Check the electrical connections for good contact.  
5. Replace the fuse.  
6. Contact an Authorized Service Dealer. |
| The engine does not start, starts hard, or fails to keep running. | 1. The fuel tank is empty.  
2. The air cleaner is dirty.  
3. The spark plug wire(s) is loose or disconnected.  
4. The spark plug(s) is pitted, fouled, or the gap is incorrect.  
5. There is dirt in fuel filter.  
6. Dirt, water, or stale fuel is in fuel system.  
7. There is incorrect fuel in the fuel tank.  
8. The oil level in the crankcase is low. | 1. Fill the fuel tank.  
2. Clean or replace the air-cleaner element.  
3. Install the wire(s) on the spark plug.  
4. Install a new, correctly gapped spark plug(s).  
5. Replace the fuel filter.  
6. Contact an Authorized Service Dealer.  
7. Drain the Authorized Service Dealer.  
8. Add oil to the crankcase. |
| The engine loses power. | 1. The engine load is excessive.  
2. The air cleaner is dirty.  
3. The oil level in the crankcase is low.  
4. The cooling fins and air passages under the engine blower housing are plugged.  
5. The spark plug(s) is pitted, fouled, or the gap is incorrect.  
6. The fuel-tank vent is blocked.  
7. There is dirt in the fuel filter.  
8. Dirt, water, or stale fuel is in fuel system.  
9. There is incorrect fuel in the fuel tank. | 1. Reduce the ground speed.  
2. Clean the air-cleaner element.  
3. Add oil to the crankcase.  
4. Remove the obstruction from the cooling fins and air passages.  
5. Install a new, correctly gapped spark plug(s).  
6. Contact an Authorized Service Dealer.  
7. Replace the fuel filter.  
8. Contact an Authorized Service Dealer.  
9. Drain the tank and replace the fuel with the proper type. |
| The machine does not drive. | 1. The bypass valves are open.  
2. The traction belts are worn, loose, or broken.  
3. The traction belts are off the pulleys.  
4. The transmission has failed. | 1. Close the tow valves.  
2. Contact an Authorized Service Dealer.  
3. Contact an Authorized Service Dealer.  
4. Contact an Authorized Service Dealer. |
