

MODEL NO. 07232 – 90001 & Up

**OPERATOR'S
MANUAL****WORKMAN® 3120**
Air Cooled Gasoline Industrial Vehicle

To assure maximum safety, optimum performance, and to gain knowledge of the product, it is essential that you or any other operator of the machine read and understand the contents of this manual before the engine is ever started. Pay particular attention to the **SAFETY INSTRUCTIONS** highlighted by this symbol—

The safety alert symbol means **CAUTION, WARNING or DANGER** — personal safety instruction. Failure to comply with the instruction may result in personal injury or death.

FOREWORD

The TORO WORKMAN® was developed to provide an efficient, versatile, trouble free and economical work vehicle. The latest concepts of engineering, design and safety have been incorporated into this machine, along with the highest quality parts and workmanship. Excellent service will be derived if proper operation and maintenance practices are followed.

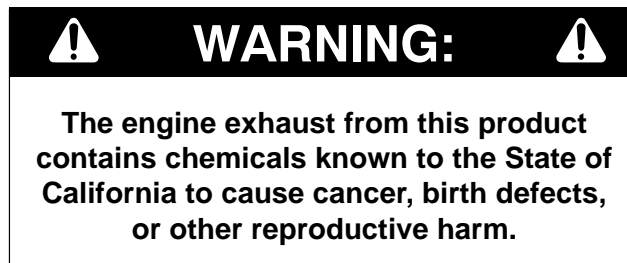

You know, since you have purchased the industry leader in maintenance excellence, that future performance and dependability are of prime importance. TORO also is concerned about future use of the machine and of safety to the user. Therefore, this manual must be read by you and those involved with the WORKMAN® to make sure that safety, proper set-up, operation and maintenance procedures are followed at all times. The major sections of the manual are:

1. Safety Instructions
2. Set-Up Instructions

3. Before Operating
4. Operating Instructions

5. Maintenance

Safety, mechanical and some general information in this manual are emphasized. **DANGER**, **WARNING** and **CAUTION** identify safety messages. Whenever the triangle safety symbol appears, it is followed by a safety message that must be read and understood. For more details concerning safety, read the safety instructions on pages 4 and 5. **IMPORTANT** identifies special mechanical information and **NOTE** identifies general information worthy of special attention.

FOREWORD

The TORO WORKMAN® meets the requirements of ANSI B56.8a – 1994.

Supervisors, operators and service persons should be familiar with the following standards and publications: (The material may be obtained from the address shown).

- Flammable and Combustible Liquids Code:
ANSI/NFPA 30
- National Fire Protection Association:
ANSI/NFPA #505; Powered Industrial Trucks
ADDRESS:
National Fire Prevention Association
Barrymarch Park
Quincy, Massachusetts 02269 U.S.A
- ANSI/ASME B56.8 Personal Burden Carriers
ADDRESS:
American National Standards Institute, Inc.
1430 Broadway
New York, New York 10018 U.S.A.
- ANSI/UL 558; Internal Combustion Engine Powered Industrial Trucks
ADDRESS:
American National Standards Institute, Inc.
1430 Broadway
New York, New York 10018 U.S.A.
OR
Underwriters Laboratories
333 Pfingsten Road
Northbrook, Illinois 60062 U.S.A.

OPTIONAL SPARK ARRESTER

In some places a spark arrester muffler must be used because of local, state or federal regulations. The spark arrester available from your local Toro Distributor is approved by the United States Department of Agriculture and the United States Forest Service.

When the machine is used or operated on any California forest, brush or grass covered land, a properly operating spark arrester must be attached to the muffler. The operator is violating state law, Section 442 Public Resources Code if a spark arrester is not used.

If help concerning set up, operation, maintenance or safety is ever needed, contact your local Authorized TORO Distributor. In addition to genuine TORO replacement parts, the distributor also has optional equipment for the complete line of TORO turf care equipment. Keep your TORO all TORO. Buy genuine TORO parts and accessories.

SAFETY INSTRUCTIONS

The WORKMAN® was designed and tested to offer safe service when operated and maintained properly. Although hazard control and accident prevention partially are dependent upon the design and configuration of the machine, these factors are also dependent upon the awareness, concern, and proper training of the personnel involved in the operation, maintenance and storage of the machine. Improper use or maintenance of the machine can result in injury or death.

This is a specialized utility vehicle designed for off-road use only. Its ride and handling will have a different feel than what drivers experience with passenger cars or trucks. So take time to become familiar with your WORKMAN®.

Not all of the attachments that adapt to the WORKMAN® are covered in this manual. See the specific Operator's Manual provided with attachment for additional safety instructions. READ THESE MANUALS.

TO REDUCE THE POTENTIAL FOR INJURY OR DEATH, COMPLY WITH THE FOLLOWING SAFETY INSTRUCTIONS.

SUPERVISOR'S RESPONSIBILITIES

1. Make sure operators are thoroughly trained and familiar with the Operator's Manual and all labels on the vehicle.
2. Be sure to establish your own special procedures and work rules for unusual operating conditions (e.g. slopes too steep for vehicle operation).

BEFORE OPERATING

3. Operate the machine only after reading and understanding the contents of this manual. A replacement manual is available by sending complete model and serial number to:

The Toro Company
8111 Lyndale Avenue South
Minneapolis, Minnesota 55420-1196.

4. Never allow children to operate the vehicle. Never allow adults to operate it without proper instructions. Only trained and authorized persons should operate this vehicle. Make sure all operators are physically and mentally capable of operating the vehicle. Anyone who operates the vehicle should have a motor vehicle license.
5. This vehicle is designed to carry only you, the operator, and one passenger in the seat provided by the manufacturer. Never carry any other passengers on the vehicle.
6. Never operate the vehicle when under the influence of drugs or alcohol.
7. Become familiar with the controls and know how to stop the engine quickly.

8. Keep all shields, safety devices and decals in place. If a shield, safety device or decal is malfunctioning, illegible, or damaged, repair or replace it before operating the machine.

9. Always wear substantial shoes. Do not operate machine while wearing sandals, tennis shoes or sneakers. Do not wear loose fitting clothing or jewelry which could get caught in moving parts and cause personal injury.

10. Wearing safety glasses, safety shoes, long pants and a helmet is advisable and required by some local safety and insurance regulations.

11. Keep everyone, especially children and pets, away from the areas of operation.

12. Before operating the vehicle, always check all parts of the vehicle and any attachments. If something is wrong, stop using vehicle. Make sure problem is corrected before vehicle or attachment is operated again.

13. Since gasoline is highly flammable, handle it carefully.

A. Use an approved gasoline container.

B. Do not remove cap from fuel tank when engine is hot or running.

C. Do not smoke while handling gasoline.

D. Fill fuel tank outdoors and to about one inch below top of tank (bottom of filler neck). Do not overfill.

E. Wipe up any spilled gasoline.

14. Check the safety interlock system daily for proper operation; refer to page 20. If a switch should malfunction, replace the switch before operating machine. After every two years, replace the interlock switches in the safety system, whether they are working properly or not.

WHILE OPERATING

WARNING: Engine exhaust contains carbon monoxide which is an odorless, deadly poison. Carbon monoxide is also known to the State of California to cause birth defects. Do not run engine indoors or in an enclosed area.

15. Operator and passenger should remain seated whenever the vehicle is in motion. Operator should keep both hands on steering wheel, whenever possible and passenger should use hand holds provided. Keep arms and legs within the vehicle body at all times. Never carry passengers in box or on attachments. Remember your passenger may not be expecting you to brake or turn and may not be ready.

SAFETY INSTRUCTIONS

16. Never overload your vehicle. Name plate (located under dash on passenger side) shows load limits for vehicle. Never overfill attachments or exceed the vehicle maximum GVW.

17. When starting the engine:

- A.** Sit on operator's seat and engage parking brake.
- B.** Disengage PTO's (if so equipped) and return hand throttle lever to OFF position (if so equipped).
- C.** Move shift lever to NEUTRAL and depress clutch pedal.
- D.** Pull up choke knob when engine is cold.
- E.** Depress and hold accelerator pedal about halfway.
- F.** Turn ignition key to START.
- G.** Push choke knob down as engine warms up.

18. This vehicle is equipped for use on flat surfaces only, not for hilly terrain. If vehicle is to be driven in hilly areas or loose terrain, install ROPS kit. ROPS provides roll-over protection.

19. This vehicle is not equipped for use where overhead objects may fall onto the operator. If vehicle is to be used in warehouse or storage situations where overhead objects exist, install a FOPS kit for falling object protection.

20. Using the machine demands attention. Failure to operate vehicle safely may result in an accident, tip over of vehicle and serious injury or death. Drive carefully. To prevent tipping or loss of control:

- A.** Use extreme caution, reduce speed and maintain a safe distance around indoor obstacles, ditches, creeks, ramps, any unfamiliar areas or other hazards.
- B.** This vehicle is not equipped for use on rough, uneven off-road terrain. Watch for holes or other hidden hazards.
- C.** Use caution when operating vehicle on a steep slope. Normally travel straight up and down slopes. Reduce speed when making sharp turns or when turning on hillsides. Avoid turning on hillsides whenever possible. If vehicle is to be driven through steep slopes, undulating or rough terrain, it is recommended that a optional ROPS Kit, be purchased and installed on vehicle. ROPS kit provides tip-over / roll-over protection.
- D.** Use extra caution when operating vehicle on wet surfaces, at higher speeds or with a full load. Stopping time will increase with a full load. Shift into a lower gear before starting up or down a hill.

E. When loading bed, distribute load evenly. Use extra caution if the load exceeds the dimensions of the vehicle/bed. Operate vehicle with extra caution when handling off-center loads that cannot be centered. Keep loads balanced and secure to prevent them from shifting.

F. Avoid sudden stops and starts. Do not go from reverse to forward or forward to reverse without first coming to a complete stop.

G. Do not attempt sharp turns or abrupt maneuvers or other unsafe driving actions that may cause a loss of vehicle control.

H. Before backing up, look to the rear and assure no one is behind. Back up slowly.

I. Watch out for traffic when near or crossing roads. Always yield the right of way to pedestrians and other vehicles. This vehicle is not designed for use on streets or highways. Always signal your turns or stop early enough so other persons know what you plan to do. Obey all traffic rules and regulations.

J. Never operate vehicle in or near an area where there is dust or fumes in the air which are explosive. The electrical and exhaust systems of the vehicle can produce sparks capable of igniting explosive materials.

K. Always watch out for and avoid low over hangs such as tree limbs, door jambs, over head walkways, etc. Make sure there is enough room over head to easily clear the vehicle and your head.

L. If ever unsure about safe operation, STOP WORK and ask your supervisor.

21. Do not touch engine, transaxle, radiator, manifold, muffler or manifold shield while engine is running or soon after it has stopped because these areas may be hot enough to cause burns.

22. If the machine ever vibrates abnormally, stop immediately, turn engine off, wait for all motion to stop and inspect for damage. Repair all damage before commencing operation.

23. Before getting off the seat:

- A.** Stop movement of the machine.
- B.** Shut engine off and wait for all movement to stop.
- C.** Set parking brake.
- D.** Remove key from ignition
- E.** Block wheels if machine is on an incline.
- F.**

24. Before servicing or making adjustments to the machine, stop engine, set parking brake and remove key from ignition to prevent accidental starting of the engine.

SAFETY INSTRUCTIONS

- 25.** Never work under a raised bed without placing a bed safety support under bed to keep bed in raised position.
- 26.** Make sure all hydraulic line connectors are tight, and all hydraulic hoses and lines are in good condition before applying pressure to the system.
- 27.** Keep body and hands away from pin hole leaks or nozzles that eject hydraulic fluid under high pressure. Use paper or cardboard, not hands, to search for leaks. Hydraulic fluid escaping under pressure can have sufficient force to penetrate skin and do serious damage. If fluid is injected into the skin it must be surgically removed within a few hours by a doctor familiar with this form of injury or gangrene may result.
- 28.** Before disconnecting or performing any work on the hydraulic system, all pressure in system must be relieved by stopping engine.
- 29.** To make sure entire machine is in good condition, keep all nuts, bolts and screws properly tightened.
- 30.** To reduce potential fire hazard, keep the engine area free of excessive grease, grass, leaves and accumulation of dirt.
- 31.** If the engine must be running to perform a maintenance adjustment, keep hands, feet, clothing, and any parts of the body away from the engine and any moving parts. Keep everyone away.
- 32.** Do not overspeed engine by changing governor settings. Maximum engine speed is 3650 rpm. To assure safety and accuracy, have an Authorized TORO Distributor check maximum engine speed with a tachometer.
- 33.** If major repairs are ever needed or assistance is required, contact an Authorized TORO Distributor.

34. To be sure of optimum performance and safety, always purchase genuine TORO replacement parts and accessories. Replacement parts and accessories made by other manufacturers could be dangerous. Altering this vehicle in any manner may affect the vehicle's operation, performance, durability or its use may result in injury or death. Such use could void the product warranty of The TORO Company.

35. This vehicle should not be modified without the TORO Company's authorization. Direct any inquiries to:

The TORO Company
Commercial Division
Vehicle Engineering Dept.
300 West 82nd St.
Bloomington, Minnesota 55420–1196. USA

SOUND PRESSURE LEVEL

This unit has an equivalent continuous A-weighted sound pressure at the operator ear of 82 dB(A) based on measurements of identical machines per Directive 84/538/EEC and amendments.

VIBRATION LEVEL

Hand-Arm

This unit does not exceed a vibration level of 2.5 m/s², at the hands based on measurements of identical machines per ISO 5349 procedures.

WHOLE BODY

This unit does not exceed a vibration level of .5 m/s² at the posterior based on measurements of identical machines per ISO 2631 procedures.

SAFETY AND INSTRUCTION DECALS

The following safety and instruction decals are installed on the machine. If any become damaged or illegible, replace them. Decal part numbers are listed below and in the parts catalog. Order replacements from your Authorized TORO Distributor.

ON LEFT FRAME RAIL
AND NEAR ENGINE
MANIFOLD
(Part No. 66-6840)

FAILURE TO COMPLY WITH THE FOLLOWING SAFETY REQUIREMENTS MAY RESULT IN PERSONAL INJURY OR DEATH. READ AND UNDERSTAND OPERATORS MANUAL BEFORE OPERATING THIS MACHINE. VEHICLE IS FOR OFF ROAD USE ONLY.

LOS OPERADORES DEBE LEER Y ENTENDER EL MANUAL DE INSTRUCCIONES ANTES DE OPERAR LA MAQUINA.

• TO AVOID TIP OVER:
- AVOID SUDDEN SHARP TURNS, STARTS AND STOPS, AVOID HOLES, DROP OFFS, OR HIDDEN HAZARDS IN TERRAIN.

• OPERATOR MUST BE SKILLED AND TRAINED IN SAFE OPERATION.

• OPERATOR AND PASSENGER (MAXIMUM ONE) MUST REMAIN SEATED AND KEEP ARMS AND LEGS WITHIN VEHICLE BODY.

• NO ADDITIONAL PASSENGERS IN BOX OR ON ATTACHMENTS.

• KEEP BYSTANDERS AWAY FROM MACHINE.

• STOP ENGINE BEFORE ADDING FUEL OR SERVICING MACHINE.

• CHECK OPERATION OF ALL INTERLOCKS, BRAKES AND ACCELERATOR DAILY. KEEP ALL SAFETY DEVICES IN PLACE.

• MAXIMUM ENGINE SPEED IS 3650 RPM. DO NOT EXCEED.

This vehicle is equipped for use on flat surfaces. Not for use on hills. If you do it is to be done with caution and proper technique. ROPS and FOPS provides roll over protection.

This vehicle is not equipped for use where overhead objects may fall onto the operator. It is to be used in situations or storage situations where overhead objects exist. ROPS and FOPS will not provide protection.

(Part No. 80-8040)

SPECIFICATIONS

Type: 4 wheel step through, out front operator style, two person vehicle. Certified to meet ANSI Specifications B56.8a–1994 and SAE J2258.

Engine: Kohler, 4 cycle, air cooled, 22 hp @ 3600 rpm, 38.1 cu. in. (624 cc) displacement. Mechanical fuel pump, 2 qt. oil capacity. Large capacity dual element air cleaner.

Battery: 12 volt with 460 cold cranking Amps @ 0 degrees F.

Fuel System: Gasoline tank capacity is 7 gallons.

Transmission: Rear transaxle configuration, twin axle drive. 3 speed synchromesh, H–shift pattern with high–low range providing 6 forward and 2 reverse speeds. Manual engage differential lock.

Clutch: 6.7” clutch and pressure plate.

Frame: Welded, high strength steel channels and tubes.

Front Suspension: Independent “A” frame control arm, dual coil springs and dual shock absorbers with anti–sway bar.

Rear Suspension: DeDion axle (weight carrying axle is independent of transaxle), leaf spring and dual shock absorbers.

Steering System: Power assist, 3 position tilt steering wheel, 3–3/4 turns lock–to–lock. 17.5 to 1 ratio, 13.5” diameter steering wheel.

Tires: Front tires: 175/80 D13–Load Range B

Rear tires: 205/75 D14–Load Range C

Brakes: 4 wheel hydraulic, dual safety circuit self adjusting drum: 7” diameter front, 8” diameter rear. Hand actuated parking brake actuates rear brake shoes.

Hydraulics: 4 gpm pressure balanced gear pump provides hydraulic flow for power steering, lift and optional remote hydraulics. Lift control valve and dual cylinders for lifting dump box. Transaxle is used for reservoir for hydraulic system. 8 quart total capacity. Spin–on 10 micron hydraulic oil filter. 100 mesh strainer in transaxle.

Specifications and design subject to change without notice.

Seat: Twin molded cushions and backrests, with shoulder and hip restraints.

Controls: Foot operated accelerator, clutch and brake pedals. Hand operated shifter, parking brake and tilt steering levers. Ignition switch, light switch, choke knob and horn button.

Gauges: Hour meter, oil pressure warning light and fuel gauge. Tachometer optional.

Lights: Twin halogen headlights and single taillight. Rear stop light.

Interlocks: Clutch pedal must be depressed to start engine.

Ground Speed:

Forward Speeds

High range: 8.2/12.4/21.5 mph

Low range: 3.2/4.8/8.4 mph

Reverse Speeds w/24” Tires

High range: 7.8 mph

Low range: 3.0 mph

General Specifications (approx.):

Base Weight: Dry w/o flatbed 1390 lbs.

Rated Capacity: *2,610 lbs.

*includes 200 lb. operator and 200 lb. passenger and loaded attachment.

Maximum. Gross Vehicle Weight: 4,000 lbs.

Tow Capacity Tongue weight 200 lbs.
Maximum trailer weight 1,500 lbs.

Overall Width: 57”

Overall Length: 124.5”w/o bed

Height: 53.5”

Ground Clearance: 9.5” w/ no load

Wheel Base: 70”

Wheel Tread: (center line to center line) 46” Front
46” Rear

LOOSE PARTS CHART

Note: Use this chart as a checklist to assure all parts necessary for assembly have been received. Without these parts, total set-up cannot be completed. Some parts may have already been assembled at factory.

DESCRIPTION	QTY.	USE
Wheel Nut Wheel – Front Wheel Nut Wheel – Rear	10 2 10 2	Mount wheels.
Steering wheel Foam Seal Washer Nut Cap	1 1 1 1 1	Install steering wheel.
Fenders – Front Phillips Screw 10–24 Washer Locknut 10–24	2 14 14 14	Install front fenders
Seat Frame Seat Frame Bracket Carriage Bolts 3/8–16 x 3/4" lg. Flange Locknut 3/8–16 Capscrew 1/2–13 x 1" lg. Locknut 1/2–13 Capscrew 3/8–16 x 1" lg. Lockwasher 3/8–16	1 2 4 4 2 2 2 2	Install seat frame
Seat Back Cushion Seat Back Bracket Capscrew 1/4–20 x 3/4" lg. Washer 1/4" Carriage Bolts 5/16–18 x 5/8" lg. Flange Locknuts 5/16–18 Manual Tube R–Clamp	2 4 8 8 8 8 1 2	Install seat back cushion and manual tube
Operator's Manual (Vehicle) Parts Catalog	2 1	Read before operating machine.
Registration Card	1	Fill out and return to Toro

SET-UP INSTRUCTIONS

INSTALL WHEELS (Fig. 1)

1. Remove and discard fasteners securing wheels.
2. Mount wheels and torque nuts to 45-55 ft-lb.

Figure 1
1. Wheel
2. Wheel Nut

INSTALL STEERING WHEEL (Fig. 2)

1. Remove jam nut from steering shaft. Slide foam seal, steering wheel and washer onto steering shaft.
2. Secure steering wheel to shaft with jam nut and tighten it to 10–15 ft-lb.
3. Install cap to steering wheel.

Figure 2
1. Steering Wheel 4. Washer
2. Jam Nut 5. Foam Seal
3. Cap

INSTALL FRONT FENDERS (Fig. 3)

1. Mount a fender to each side of skirt with (7) 10–24 Phillips screws, flat washers and locknuts.

Figure 3
1. Fender

INSTALL SEAT FRAME (Fig. 4)

1. Mount a seat frame bracket to each end of seat frame with (2) 3/8–16 x 3/4" carriage bolts and flange locknuts.
2. Position seat frame on vehicle, aligning mounting holes in frame with holes in vehicle.
3. Secure front legs of seat frame to sides of vehicle floor with (2) 1/2–13 x 1" lg. capscrews and locknuts.
4. Secure bottom of each seat frame bracket to vehicle frame with a 3/8–16 x 1" capscrew and lockwasher.

Figure 4
1. Seat frame
2. Seat frame bracket

SET-UP INSTRUCTIONS

INSTALL SEAT BACK CUSHIONS AND MANUAL TUBE (Fig. 5 – 6)

1. Mount (2) seat back brackets to each seat back cushion with (4) 1/4–20 x 3/4" lg. capscrews and 1/4" flat washers. Position brackets on seat back cushions as shown in figure 5.

Figure 5

- 1. Cushion seat back
- 2. Seat back bracket

2. Mount cushion with seat back brackets to right side of seat back with (4) 5/16–18 x 5/8" lg. carriage bolts and flange locknuts.

3. Slide manual tube into (2) R-clamps.

Figure 6

- 1. Cushion seat back
- 2. Seat back bracket
- 3. Seat back
- 4. Manual tube
- 5. R-clamp

4. Mount cushion with seat back brackets and manual tube R-clamps to left seat back with (4) 5/16–18 x 5/8" lg. carriage bolts and flange locknuts.

ACTIVATE AND CHARGE BATTERY (Fig. 7 & 8)

(Fig. 7 & 8)

If Battery is not filled with electrolyte or activated, it must be removed from vehicle, filled with electrolyte and charged. Bulk electrolyte with 1.260 specific gravity can be purchased from a local battery supply outlet.

CAUTION

Electrolyte gases are explosive and can cause serious injury to eyes, lungs and skin. Wear safety goggles and rubber gloves when working with electrolyte or battery. Charge the battery in a well ventilated place so gases produced while charging can dissipate. Since the gases are explosive, keep open flames and electrical spark away from the battery; do not smoke. Nausea may result if the gases are inhaled. Unplug charger from electrical outlet before connecting to or disconnecting charger leads from battery posts.

1. Loosen knobs securing battery cover to battery base and slide cover off.

2. Remove capscrew, washers and locknut securing battery hold down to battery base. Remove hold down and slide battery out of battery base.

Figure 7

- 1. Battery cover
- 2. Knob
- 3. Battery base

SET-UP INSTRUCTIONS

3. Remove filler caps from battery and slowly fill each cell until electrolyte is just above the plates.
 4. Replace filler caps and connect a 3 to 4 amp battery charger to the battery posts. Charge the battery at a rate of 3 to 4 amperes for 4 to 8 hours.
 5. When battery is charged, disconnect charger from electrical outlet and battery posts.
 6. Remove filler caps. Slowly add electrolyte to each cell until level is up to fill ring. Install filler caps.
- IMPORTANT: Do not overfill battery. Electrolyte will overflow onto other parts of the vehicle and severe corrosion and deterioration will result.**
7. Slide battery into battery base so battery terminals are toward the rear of the vehicle.

Figure 8

1. Positive (+) cable
2. Hold down

8. Install the positive cable (red) to the positive (+) terminal and the negative cable (black) to the negative (—) terminal of the battery and secure with capscrews and nuts. Slide the rubber boot over the positive terminal to prevent possible short-out from occurring.

WARNING

Connecting cables to the wrong post could result in personal injury and/or damage to the electrical system. Make sure battery or cables do not interfere or rub on any moving or hot parts.

9. Install battery hold down and secure to base with capscrew, washers and locknut.
10. Reinstall battery cover to battery base and tighten knobs.

BEFORE OPERATING

CAUTION

Before servicing or making adjustments to the machine, stop engine, set parking brake and remove key from the switch. Any load material must be removed from bed or other attachment before working under raised bed.

CHECK CRANKCASE OIL (Fig. 9)

The engine is shipped with approximately 2 quarts (w/ filter) of oil in the crankcase; however, level of oil must be checked before and after the engine is first started.

1. Position machine on a level surface.
2. Remove dipstick and wipe it with a clean rag. Insert dipstick into tube and make sure it is seated fully. Remove dipstick and check level of oil. If oil level is low, remove filler cap and add enough oil to raise level to FULL mark on dipstick.

Figure 9

1. Dipstick
2. Filler cap

3. The engine uses any high-quality detergent oil having the American Petroleum Institute -API- "service classification" SG, SH or SJ. Oil viscosity — weight — is selected according to anticipated ambient temperature.

Temperature/ viscosity recommendations are:

- A. Above 0° F (–20° C) — Use 10W–30 or 10W–40
- B. Below 32° F (0° C) — Use SAE 5W–20 or 5W–30.

4. Pour oil into fill opening until the oil level is up to the "FULL" mark on the dipstick. Add the oil slowly and check the level often during this process. **DO NOT OVERFILL.**

IMPORTANT: Check level of oil every 8 operating hours or daily. Change oil and filter initially after the first 5 hours of operation, thereafter, change oil and filter every 50 hours. However, change oil more frequently when engine is operated in extremely dusty or dirty conditions.

5. Install the dipstick firmly in place.

FILL FUEL TANK (Fig. 10)

Fuel tank capacity is approximately 7 gallons.

THE TORO COMPANY STRONGLY RECOMMENDS THE USE OF FRESH, CLEAN, **UNLEADED** REGULAR GRADE GASOLINE IN TORO GASOLINE POWERED PRODUCTS. UNLEADED GASOLINE BURNS CLEANER, EXTENDS ENGINE LIFE, AND PROMOTES GOOD STARTING BY REDUCING THE BUILD-UP OF COMBUSTION CHAMBER DEPOSITS. MINIMUM OCTANE RATING OF 87.

NOTE: NEVER USE METHANOL, GASOLINE CONTAINING METHANOL, GASOLINE CONTAINING MORE THAN 10% ETHANOL, GASOLINE ADDITIVES, OR WHITE GAS BECAUSE ENGINE FUEL SYSTEM DAMAGE COULD RESULT.

1. Clean area around fuel tank cap.

Figure 10

1. Fuel tank cap

2. Remove fuel tank cap.
3. Fill tank to about one inch below top of tank, (bottom of filler neck). **DO NOT OVERFILL.** Then install cap.
4. Wipe up any fuel that may have spilled to prevent a fire hazard.

BEFORE OPERATING

DANGER

Because gasoline is flammable, caution must be used when storing or handling it. Do not fill fuel tank while engine is running, hot or when machine is in an enclosed area. Vapors may build up and be ignited by a spark or flame source many feet away. **DO NOT SMOKE** while filling the fuel tank to prevent the possibility of an explosion. Always fill fuel tank outside and wipe up any spilled gasoline before starting engine. Use a funnel or spout to prevent spilling gasoline, and fill tank no higher than one inch below top of tank, (bottom of filler neck). **DO NOT OVER FILL.** Store gasoline in a clean safety approved container and keep the cap on the container. Keep gasoline in a cool, well-ventilated place; never in an enclosed area such as a hot storage shed. To assure volatility, do not buy more than a 30 day supply of gasoline. Gasoline is a fuel for internal combustion engines; therefore do not use it for any other purpose. Since many children like the smell of gas, keep it out of their reach because the fumes are explosive and dangerous to inhale.

Figure 11
1. Dipstick

CHECK TRANSAXLE / HYDRAULIC FLUID (Fig. 11)

The transaxle reservoir is filled with Dexron III ATF. Check level before engine is first started and every 8 hours or daily, thereafter. Capacity of system is 7.5 qt.

1. Position the vehicle on a level surface.
2. Clean area around dipstick.
3. Unscrew dipstick from top of transaxle and wipe it with a clean rag.
4. Screw dipstick into transaxle and make sure it is seated fully. Unscrew dipstick and check fluid level. Fluid should be up to top of flat portion of dipstick. If level is low, add enough fluid to achieve the proper level.

CHECK BRAKE FLUID (Fig. 12)

The brake fluid reservoir is shipped from the factory filled with "DOT 3" brake fluid. Check level before engine is first started and every 8 hours or daily, thereafter.

1. Park machine on a level surface.
2. Fluid level should be up to FULL line on reservoir.
3. If fluid level is low, clean area around cap, remove reservoir cap and fill to proper level. **DO NOT OVERFILL.**

Figure 12
1. Brake fluid reservoir
2. Full line

CHECK TORQUE OF WHEEL NUTS

WARNING

Failure to maintain proper torque could result in failure or loss of wheel and may result in personal injury. Torque front and rear wheel nuts to 45-65 ft -lb after 1-4 hours of operation and again after 10 hours of operation and every 200 hours thereafter.

CONTROLS

Accelerator Pedal (Fig. 13) – The accelerator pedal gives the operator the ability to vary engine and ground speed of the vehicle, when the transmission is in gear. Depressing the pedal increases engine RPM and ground speed. Releasing pedal will decrease engine RPM and ground speed of the machine.

Figure 13

1. Accelerator pedal
2. Clutch pedal
3. Brake pedal

Clutch Pedal (Fig. 13) – The clutch pedal must be fully depressed to disengage clutch when starting engine or shifting transmission gears. Release pedal smoothly when transmission is in gear to prevent unnecessary wear on transmission and other related parts.

IMPORTANT: Do not ride clutch pedal during operation. Clutch pedal must be fully out or clutch will slip causing friction and wear. Never hold the vehicle stopped on a hill using the clutch pedal. Damage to the clutch may occur.

Brake Pedal (Fig. 13)) – The brake pedal is used to apply service brakes to stop or slow vehicle.

CAUTION

Worn or misadjusted brakes may result in personal injury. If brake pedal travels to within 1" of the vehicle floor board, the brakes must be adjusted or repaired.

Gear Shift Lever (Fig. 14) – Fully depress clutch pedal and move shift lever into desired gear selection. A diagram of the shift pattern is indicated below.

Shift Pattern

IMPORTANT: Do not shift the transaxle to the reverse or forward gear unless the vehicle is standing still. Damage to transaxle may occur.

CAUTION

Down shifting from too high a speed can cause the rear wheels to skid resulting in loss of vehicle control as well as clutch and/or transmission damage. Shift smoothly to avoid grinding gears.

Differential Lock (Fig. 14) – Allows rear axle to be locked for increased traction. Differential lock may be engaged with vehicle in motion. Move lever forward and to the right to engage lock.

Note: Vehicle motion plus a slight turn is required to engage or disengage differential lock.

WARNING

Turning with the differential lock on can result in loss of vehicle control. Do not operate with differential lock on when making sharp turns or at high speeds. Refer to using the differential lock, page 24.

Figure 14

1. Gear shift lever
2. Parking brake
3. Choke
4. Passenger hand hold

Choke (Fig. 14) — To start a cold engine, close carburetor choke by pulling choke control upward to ON position. After engine starts, regulate choke to keep engine running smoothly. As soon as possible, open the choke by pushing it downward to the OFF position. A warm engine requires little or no choking.

CONTROLS

Parking Brake (Fig. 14) – Whenever the engine is shut off, the parking brake must be engaged to prevent accidental movement of the vehicle. To engage the parking brake, pull back on lever. To disengage, push lever forward. Make sure parking brake is released before moving vehicle. If vehicle is parked on a steep grade, make sure parking brake is applied. Also, shift the transmission into 1st gear on a uphill grade or reverse on a down hill grade. Place chocks at the down hill side of wheels.

Hydraulic Lift (Fig. 14) – Raises and lowers bed. Move rearward to raise, forward to lower.

IMPORTANT: When lowering bed, hold lever in forward position for 1 or 2 seconds after bed contacts frame to secure it in lowered position. Do not hold the hydraulic lift in either the raise or lower position, for more than 5 seconds, once the cylinders have reached the end of their travel. The hydraulic pump may over heat, resulting in pump damage.

Passenger Hand Hold (Fig. 14) – Left side of passenger seat.

Figure 15

- | | |
|------------------------|-------------------------------|
| 1. Tilt steering lever | 3. Horn button |
| 2. Ignition switch | 4. Oil pressure warning light |

Horn Button (Fig. 15) – Pressing button activates horn.

Ignition Switch (Fig. 15) – The ignition switch, used to start and stop the engine, has three positions: OFF, RUN and START. Rotate key clockwise — START position — to engage starter motor. Release key when engine starts. The key will move automatically to the ON position. To shut engine off, rotate key counterclockwise to OFF position.

Oil Pressure Warning Light (Fig. 15) – Light glows if engine oil pressure drops below a safe level. If light flickers or remains ON, stop vehicle, turn off engine and check oil level. If oil level was low, but adding oil does not cause light to go out when engine is restarted, turn engine off immediately and contact your local TORO distributor for assistance.

To check operation of warning lights:

1. Apply parking brake.
2. Turn ignition key to “ON”, but do not start engine. The oil pressure light should glow. If light does not function, either a bulb is burned out or there is a malfunction in the system which must be repaired.

NOTE: If engine was just turned off, it may take 1 to 2 minutes for light to come on.

Hour Meter (Fig. 16) – Indicates the total hours of machine operation. The hour meter starts to function whenever the key switch is rotated to “ON” position.

Light Switch (Fig.16) – Toggle switch to activate headlights. Push to turn lights “ON”.

Fuel Gauge (Fig.16) – Shows amount of fuel in tank. Operates only when ignition switch is in “ON” position.

Figure 16

- | | |
|-----------------|----------------------------|
| 1. Light switch | 4. 3rd High lockout switch |
| 2. Hour meter | 5. Steering wheel |
| 3. Fuel gauge | |

Steering Wheel (Fig. 16) – Turns vehicle. If engine stalls or power assist fails due to a malfunction, vehicle steering will require greater effort.

Tachometer (optional—not shown) – Indicates engine RPM. Gear selection graphics indicates speed.

Remote Hydraulic Lever (optional—not shown) – Controls hydraulic flow to optional quick rear couplers.

OPERATING INSTRUCTIONS

PRE—STARTING CHECKS

Safe operation begins before taking the vehicle out for a day's work. You should check these items each time:

1. Check tire pressure.

Note: These tires are different than car tires, they require less pressure to minimize turf compaction and damage.

2. Check all fluid levels and add the appropriate amount of Toro specified fluids, if any are found to be low.
3. Check brake pedal operation.
4. Check to see that the lights and horn are working.
5. Turn steering wheel to the left and right to check steering response.
6. Check for oil leaks, loose parts and any other noticeable malfunctions. Make sure engine is off and all moving parts have stopped before checking for oil leaks, loose parts and other malfunctions.

If any of the above items are not correct, notify your mechanic or check with your supervisor before taking the vehicle out for the day. Your supervisor may want you to check other items on a daily basis, so ask what your responsibilities are.

STARTING ENGINE

1. Sit on operator's seat and engage parking brake.
2. Disengage PTO's (if so equipped) and return hand throttle lever to OFF position (if so equipped).
3. Move shift lever to NEUTRAL position and depress clutch pedal.
4. Keep foot off accelerator pedal.

A. If engine is cold— depress and hold the accelerator pedal about half way down and pull choke knob up to ON position while cranking engine.

B. If engine is hot— depress and hold the accelerator pedal about half way down while cranking engine.

C. If engine is flooded — fully depress accelerator pedal and hold it to the floor until the engine starts. Never pump the accelerator pedal.

5. Insert key into ignition switch and rotate it clockwise to start the engine. Release key when engine starts. Regulate the choke to keep engine running smoothly.

IMPORTANT: To prevent overheating of the starter motor, do not engage starter longer than 10 seconds. After 10 seconds of continuous cranking, wait 60 seconds before engaging starter motor again.

DRIVING VEHICLE

1. Release parking brake.
2. Fully depress clutch pedal.
3. Move gear shift lever to 1st gear.
4. Release clutch pedal smoothly while depressing accelerator pedal.
5. When vehicle gains enough speed, remove foot from accelerator pedal, fully depress clutch pedal, move gear shift lever to next gear and release clutch pedal while depressing accelerator pedal. Repeat procedure until desired speed is attained. Stop vehicle before shifting to reverse and forward.

Note: Avoid long periods of engine idling.

Note: Leaving ignition switch in "ON" position for long periods of time without running engine will discharge battery.

IMPORTANT: Do not hold front wheels turned against the right or left stops for longer than 5 seconds. The hydraulic pump may over heat, resulting in pump or steering gear damage.

6. Do not attempt to push or tow vehicle to get it started. Damage to drive train could result.

STOPPING VEHICLE

1. To stop machine, remove foot from accelerator pedal, depress clutch pedal, then depress brake pedal.

STOPPING ENGINE

1. To stop engine, rotate ignition key to OFF and engage parking brake. Remove key from switch to prevent accidental starting.

NEW VEHICLE BREAK—IN

Your Workman 3100® is ready for work. To provide proper performance and long vehicle life, follow these guidelines for the first 100 operating hours.

- Check the fluid and engine oil levels regularly and be alert for indications of overheating in any component of the vehicle.
- After starting a cold engine, let it warm up for about 15 seconds before shifting into gear.
- Avoid racing the engine.
- Avoid hard braking situations for the first several hours of new vehicle brake—in operation. New brake linings may not be at optimum performance until several hours of use has caused the brakes to become burnished (broke—in). However, a specific brake burnish procedure may be followed to allow optimum performance right away.

OPERATING INSTRUCTIONS

- To burnish brakes: Operate the vehicle at full speed for 3 minutes, apply the brakes for 30 seconds while engaging the accelerator pedal. Repeat these steps 20 to 30 times. To verify the brakes are completely burnished remove a rear tire and inspect the brake drum for residue. The residue color should be light grey to almost white color.
- Vary vehicle speeds during operation. Avoid excessive idling. Avoid fast starts and quick stops.
- A break-in oil for engine is not required. Original engine oil is the same type specified for regular oil changes.
- Refer to Maintenance section of Operator's Manual for any special low hour checks.

CHECK INTERLOCK SYSTEM

The purpose of the interlock system is to prevent the engine from cranking or starting unless the clutch pedal is depressed.

CAUTION

The interlock switches are for the operator's protection, so do not bypass them. Check operation of the switches daily to assure interlock system is operating. If a switch is malfunctioning replace it before operating. Regardless whether switches are operating properly or not, replace them every two years to assure maximum safety. Do not rely entirely on safety switches – use common sense!

To verify clutch interlock switch operation:

1. Sit on operator's seat and engage parking brake. Move shift lever to NEUTRAL position.
2. Without depressing clutch pedal, rotate key clockwise to start position.
3. If engine cranks or starts, there is a malfunction in the interlock system that must be repaired before operating vehicle.

Refer to Attachment Operator's Manual for procedure on checking attachment interlock system.

OPERATING CHARACTERISTICS

The vehicle is designed with safety in mind. It has four wheels for added stability. It uses familiar automotive style controls, including the steering wheel, brake pedal, clutch pedal, accelerator pedal, and gear shifter. It is important to remember, however, that this vehicle is not a passenger car. It is a work vehicle and not designed for use on roadways.

The vehicle has special tires, low gear ratios, a locking differential, and other features that give it extra traction. These features add to the versatility of the vehicle but,

they can also get you into dangerous situations. You must keep in mind that the vehicle is not a recreation vehicle. It is not an all terrain vehicle. And, it is definitely not meant for "stunt driving" or "horsing around". It is a work vehicle, not a play vehicle. Children should not be allowed to operate the vehicle. Anyone who operates the vehicle should have a motor vehicle license.

If you are not experienced at driving the vehicle, practice driving it in a safe area away from other people. Be sure you are familiar with all the vehicle's controls, particularly those used for braking, steering and transmission shifting. Learn how your vehicle handles on different surfaces. Your operating skills will improve with experience, but as in operating any vehicle, take it easy as you begin. Be sure you know how to stop quickly in an emergency. If you need help, ask your supervisor for assistance.

Many factors contribute to accidents. You have control over several of the most important. Your actions, such as driving too fast for conditions, braking too fast, turning too sharp, and combinations of these, are frequent cause of accidents.

One of the major causes of accidents is fatigue. Be sure to take occasional breaks. It is very important that you stay alert at all times.

Never operate the vehicle, or any equipment, if you are under the influence of alcohol or other drugs. Even prescription drugs and cold medicines can cause drowsiness. Read the label on the medicine or check with your doctor or pharmacist if you are unsure about a certain medication.

One of the most important rules to follow is to go slower in unfamiliar areas. It is surprising how much damage and injury common things can cause. Tree branches, fences, wires, other vehicles, tree stumps, ditches, sand traps, streams, and other things found in most parks and golf courses can be hazardous to the operator and passenger.

Avoid driving when it is dark, especially in unfamiliar areas. If you must drive when it is dark, be sure to drive cautiously, use the head lights, and even consider adding additional lights.

PASSENGERS

Whenever you have a passenger riding in the vehicle make sure he or she is holding on securely. Drive slower and turn less sharply because your passenger does not know what you are going to do next and may not be prepared for turning, stopping, accelerating, and bumps.

You and your passenger should remain seated at all times, keeping arms and legs inside the vehicle. The operator should keep both hands on steering wheel, whenever possible and passenger should use hand holds provided.

OPERATING INSTRUCTIONS

There should never be passengers in the dump box or on any attachments. The vehicle is meant to have one driver and only one passenger—no more.

SPEED

Speed is one of the most important variables leading to accidents. Driving too fast for the conditions can cause you to lose control and have an accident. Speed can also make a minor accident worse. Driving head-on into a tree at slow speed can cause injury and damage, but, driving into a tree at high speed can destroy the vehicle and kill you and your passenger.

Never drive too fast for the conditions. If there is any doubt about how fast to drive, slow down.

When using heavy attachments (more than 1000 pounds), such as sprayers, top dressers, or spreaders, etc., operating speeds should be restricted by moving 3rd high lockout switch to slow——position.

TURNING

Turning is another important variable leading to accidents. Turning too sharply for the conditions can cause the vehicle to lose traction and skid, or even tip over.

Wet, sandy and slippery surfaces make turning more difficult and risky. The faster you are going, the worse this situation becomes so, slow down before turning.

During a sharp turn at higher speeds, the inside rear wheel may lift off of the ground. This is not a flaw in the design, it happens with most four wheel vehicles including passenger cars. If this happens, you are turning too sharply for the speed at which you are traveling. Slow down!

BRAKING

It is good practice to slow down before you get near an obstacle. This gives you extra time to stop or turn away. Hitting an obstacle can damage the vehicle and its contents. More important, it can injure you and your passenger.

Gross vehicle weight has a major impact on your ability to stop and/or turn. Heavier loads and heavier attachments make a vehicle harder to stop or turn. The heavier the load, the longer it takes to stop.

The braking characteristics also change with no bed or attachment on the vehicle. Fast stops may cause the rear wheels to lock up before the front wheels lock up, which may affect the control of the vehicle. It is a good idea to decrease vehicle speed with no bed or attachment.

Turf and pavement are much slipperier when they are wet. It can take 2 to 4 times as long to stop on wet surfaces as on dry surfaces.

If you drive through standing water deep enough to get the brakes wet, they will not work well until they are dry.

After driving through water, you should test the brakes to make sure they work properly. If they do not, drive slowly in first gear while putting light pressure on the brake pedal. This will dry the brakes out.

Do not downshift for braking on icy or slippery surfaces (wet grass) or while going down a hill because engine braking may cause skidding and loss of control. Shift to a lower gear before starting down a hill.

TIPOVERS

This vehicle is equipped for use on flat surfaces only, not for hilly terrain. If vehicle is to be driven in hilly areas or loose terrain, install ROPS kit. ROPS provides roll-over protection.

The best way for operators to prevent serious injury or death to themselves or others, is to familiarize themselves with the proper operation of the utility vehicle, to stay alert and to avoid actions or conditions which could result in an accident. In the event of a tip over, injury or death could result.

OVERHEAD OBJECTS

This vehicle is not equipped for use where overhead objects may fall onto the operator. If vehicle is to be used in warehouse or storage situations where overhead objects exist, install a FOPS kit for falling object protection.

The best way to prevent accidents involving utility vehicles is through continuous supervision and training of operators and paying constant attention to the area in which vehicle is being operated.

OPERATING INSTRUCTIONS

HILLS

**WARNING**

Tipping or rolling the vehicle on a hill will cause serious personal injury.

- **If engine stalls or you lose headway on a hill, never attempt to turn vehicle around.**
- **Always back straight down a hill in reverse gear.**
- **Never back down in neutral or with the clutch depressed, using only the brakes.**
- **Never drive across a steep hill, always drive straight up or down.**
- **Avoid turning on a hill**
- **Don't "drop the clutch" or slam on the brakes. Sudden speed change can initiate tipover.**

Use extra care when on hills. Never go on hills that are extremely steep. Stopping while going down a hill will take longer than on level ground. Turning while going up or down a hill is more dangerous than turning on the level. Turns while going down hill, especially with the brakes on, and, turning up hill while traversing a hill are particularly dangerous. Even at a slow speed and without a load, tip overs are more likely if you turn on a hill.

Slow down and shift into a lower gear before starting up or down a hill. If you have to turn while on a hill, do it as slowly and cautiously as possible. Never make sharp or fast turns on a hill.

If you stall or begin to lose headway while climbing a steep hill, quickly apply the brakes, shift to neutral, restart the engine and shift to reverse. At idle speed, engine and transaxle drag will aid the brakes in controlling the vehicle on the hill and help you back down the hill more safely.

Reduce the weight of the load if it is a steep hill or if the load has high center of gravity. Remember, loads can shift. Secure them.

LOADING

The weight and position of the cargo and passenger can change the vehicle center of gravity and vehicle handling. To avoid loss of control resulting in personal injury, follow these guidelines.

Do not carry loads which exceed the load limits described on the vehicle weight label.

The vehicle has several combinations of boxes, platforms, and attachments available. These can be used in various combinations that allow for maximum capacity and versatility.

Loads vary in how they are distributed. Sand spreads out evenly and quite low. Other items, such as bricks, fertilizer or landscape timbers, stack higher in the box.

The height and weight of the load has a significant influence on tip overs. The higher a load is stacked, the more likely the vehicle is to tip over. You may find that 2000 pounds stacks too high for safe operation. Reducing the total weight is one way to reduce the risk of a tip over. Distributing the load as low as possible is another way to reduce the risk of a tip over.

If the load is positioned toward one of the sides, it will make the vehicle much more likely to tip over on that side. This is especially true when turning if the load is on the outside of the turn.

Never position heavy loads behind the rear axle. If the load is positioned so far to the rear that it is behind the rear axle, it will reduce the weight on the front wheels and this will reduce steering traction. With the load all the way to the back, the front wheels can even come off of the ground when going over bumps or up a hill. This will result in a loss of steering and may lead to the vehicle tipping over.

As a general rule, position the weight of the load evenly from front to rear and evenly from side to side.

If a load is not secured, or you are transporting a liquid in a large container such as a sprayer, it can shift. This shifting happens most often while turning, going up or down hills, suddenly changing speeds or while driving over rough surfaces. Shifting loads can lead to tip overs. Always secure loads so that they do not shift. Never dump the load while the vehicle is sideways on the hill.

Heavy loads increase stopping distance and reduce your ability to turn quickly without tipping over.

The rear cargo space is intended for load carrying purposes only, not for passengers.

TRANSPORTING VEHICLE

For moving the vehicle long distances, a trailer should be used. Make sure the vehicle is secured to the trailer. Refer to Figures 17 and 18 for location of tie down points.

TOWING VEHICLE

In case of emergency, the vehicle can be towed for a short distance. However, Toro does not recommend this as a standard procedure.

OPERATING INSTRUCTIONS

WARNING

Towing at excessive speeds could cause vehicle to lose steering control. Never tow vehicle faster than 5 MPH.

Towing the vehicle is a two person job. Affix a tow line to holes in front frame member. Move shifter to Neutral and release parking brake. If machine must be moved a considerable distance, transport it on a truck or trailer.

Note: The power steering will not function, making it difficult (increase effort) to steer.

Figure 17

1. Eye holes in frame

Figure 18

1. Axle tube
2. Hitch plate

TRAILER TOWING

The Workman 3100® is capable of pulling trailers and attachments of greater weight than the vehicle itself.

Several types of tow hitches are available for the Workman, depending on your application. Contact your Authorized TORO Distributor for details.

When equipped with a tow hitch bolted onto rear axle tube, your Workman can tow trailers or attachments with a Gross Trailer Weight (GTW) up to 1500 lbs. Always load a trailer with 60% of the cargo weight in the front of the trailer. This places approximately 10% (200 lbs. max.) of the Gross Trailer Weight (GTW) on the tow hitch of the vehicle.

When towing either standard tongue or 5th wheel trailers having a Gross Trailer Weight (GTW) in excess of 1500 lbs., use either a chassis mounted draw bar hitch (rated for 3500 lb. GTW) or 5th wheel kit with brakes. Trailer brakes are required whenever a trailer over 1500 lbs. GTW is towed behind a Workman vehicle.

When hauling cargo or towing a trailer (attachment), do not overload your vehicle or trailer. Overloading can cause poor performance or damage to the brakes, axle, engine, transaxle, steering, suspension, body structure or tires.

Important: To reduce potential for drive line damage, use low range.

When towing 5th wheel attachments, like a fairway aerator, always install the "wheely bar" (included with the 5th wheel kit) to prevent the front wheels from lifting off the ground if the towed attachments movement is suddenly impaired.

MAINTENANCE CHART AND CHECKLIST

Daily Maintenance: (duplicate this page for routine use)

STRAINER				CLEAN 800 HOURS		87-3990

FOR HEAVY DUTY OPERATION, MAINTENANCE SHOULD BE PERFORMED TWICE AS FREQUENTLY.

LUBRICATION

CAUTION

Before servicing or making adjustments to the machine, stop engine, set parking brake and remove key from the switch. Any load material must be removed from bed or other attachment before working under raised bed. Always place safety support on extended lift cylinder, to hold up bed, before working under raised bed.

GREASING BEARINGS AND BUSHINGS

(Fig. 19–22)

The vehicle has (33) grease fittings that must be lubricated regularly with No. 2 General Purpose Lithium Base Grease. If machine is operated under normal conditions, lubricate all bearings and bushings after every 100 hours of operation. More frequent lubrication is required if used for heavy duty vehicle operations.

The grease fitting locations and quantities are: Tie rod ends (4) (Fig. 19), Front ball joints (4) (Fig. 19), Rear drive shafts (18) (Fig. 21), Steering shaft (1) (Fig. 22), Front pivot bushings (2) (Fig. 20) and Pedal pivots (4) (Fig. 23).

IMPORTANT: When greasing drive shaft universal shaft bearing crosses, pump grease until it comes out of all 4 cups at each cross.

1. Wipe grease fitting clean so foreign matter cannot be forced into the bearing or bushing.
2. Pump grease into the bearing or bushing.
3. Wipe off excess grease.

Figure 19

LUBRICATION

Figure 20

Figure 22

Figure 21

Figure 23

IMPORTANT

Heavy Duty Operation

If vehicle is subjected to conditions listed below, maintenance should be performed twice as frequently.

- Desert operation
- Cold climate operation (below 32°F)
- Trailer or 5th wheel towing
- Frequent operation on dusty roads
- Frequent operation under maximum vehicle gross weight
- Construction work
- After extended operation in mud, sand, water or similar dirty conditions, have your brakes inspected and cleaned and drive axle joints greased as soon as possible. This will prevent any abrasive material from causing excessive wear.
- Under frequent heavy duty operating conditions, lubricate all grease fittings and inspect air cleaner daily to prevent excessive wear.

MAINTENANCE

CAUTION

Only qualified and authorized personnel shall be permitted to maintain, repair, adjust or inspect the vehicle.

Avoid fire hazards and have fire protection equipment present in the work area. Do not use an open flame to check level or leakage of fuel, battery electrolyte or coolant. Do not use open pans of fuel or flammable cleaning fluids for cleaning parts.

Many of the subjects covered in this maintenance section require raising and lowering the bed. The following precautions must be taken or serious injury or death could result.

WARNING

Before servicing or making adjustments to the machine, stop engine, set parking brake and remove key from ignition switch. Any load material must be removed from bed or other attachment before working under raised bed. Never work under a raised bed without positioning a safety support.

After maintenance is completed, remove safety support.

JACKING VEHICLE (Fig. 24 & 25)

1. Do not start engine while vehicle is on jack, because engine vibration or wheel movement could cause vehicle to slip off jack.
2. Do not work under vehicle without jack stands supporting it. The vehicle could slip off jack, injuring any one beneath it.
3. The jacking point at the front of the vehicle is under the front center frame support and at the rear it is under the axle tube.

Figure 24

1. Front jacking point

Figure 25

1. Rear jacking points

4. When jacking up front of vehicle, always place a 2x4 block (or similar material) between jack and vehicle frame.

SERVICING AIR CLEANER (Fig. 26 & 27)

The foam pre-cleaner must be cleaned and re-oiled after every 25 hours engine operation if engine is operated in clean air conditions. However, air cleaner must be cleaned every few hours if operating conditions are extremely dusty or sandy.

- 1 Remove wing nut and cover.

Figure 26

1. Air cleaner cover

- 2 Remove foam pre-cleaner by sliding it off the paper element.

A. Wash foam pre-cleaner in detergent and warm water.

B. Wrap foam pre-cleaner in cloth and squeeze dry. Do not wring pre-cleaner. Allow to air dry.

C. Saturate foam pre-cleaner in engine oil. Squeeze to remove excess oil.

MAINTENANCE

Figure 27

1. Pre-cleaner
2. Paper element

- 3 Reinstall on paper cartridge.

Inspect paper element every 25 hours of operation and replace if dirty or damaged. Change paper element every 200 hours. Do not wash paper element or do not clean with compressed air as damage will occur.

Note: With air cleaner disassembled, check air cleaner components for damage. Replace if necessary. Make sure rubber breather tube in base plate is securely in place or severe engine damage may occur.

- 4 Reinstall element with pre-cleaner, element cover sealing tube, air cleaner element cover, wing nut, second sealing tube, air cleaner cover and wing nut.

- 5 Tighten wing nut 1/2 to 1 turn after nut contacts cover. Do not overtighten.

CHANGING ENGINE OIL AND FILTER

(Fig. 28)

Change oil and filter initially after the first 5 hours of operation, thereafter, change oil and filter every 50 hours.

1. Raise bed (if so equipped) and place a safety support under it to hold up bed.
2. Remove drain plug and let oil flow into drain pan. When oil stops, install drain plug.

Figure 28

1. Engine oil drain plug
2. Engine oil filter

3. Remove oil filter. Apply a light coat of clean oil to the new filter seal before screwing it on. Screw filter on until gasket contacts mounting plate, then tighten filter and additional 1/2 turn. DO NOT OVER-TIGHTEN.

4. Add oil to crankcase, refer to Check Engine Oil.

FUEL SYSTEM (Fig. 29)

Fuel Lines and Connections

Check lines and connections every 400 hours or yearly, whichever comes first. Inspect for deterioration, damage, or loose connections.

Fuel Filter

Replace filter canister after every 600 hours of operation.

1. Raise bed (if so equipped) and place a safety support under it to hold up bed.
2. Place a clean container under fuel filter.
3. Loosen R-clamp securing filter to frame.
4. Remove clamps securing fuel filter to fuel lines.

Figure 29

1. Fuel Filter

5. Install new fuel filter to fuel lines with clamps previously removed. Filter to be mounted so arrow points toward carburetor.

MAINTENANCE

REMOVING DEBRIS FROM ENGINE

To ensure proper cooling, make sure the grass screen, cooling fins and other external surfaces of the engine are kept clean at all times.

Every 100 hours of operation (more often under extremely dusty, dirty conditions) remove the blower housing and other cooling shrouds and clean the cooling fins and external surfaces as necessary. Make sure cooling shrouds are reinstalled.

NOTE: Operating the engine with a blocked grass screen, dirty or plugged cooling fins or cooling shrouds removed, will cause engine damage due to overheating.

ADJUSTING BELT (Fig. 30)

Check condition and tension of pump drive belt after first day of operation and every 200 operating hours thereafter. Raise bed (if so equipped) and position safety support on extended lift cylinder to hold up bed.

1. Check tension by depressing belt at mid span of crankshaft and pump pulleys with 22 lbs. of force. A new belt should deflect .48–.58 in. A used belt should deflect .55–.65 in. If deflection is incorrect, proceed to next step. If correct, continue operation.

2. To adjust belt tension:

A. Loosen nuts securing hydraulic pump to engine frame.

B. Rotate pump until desired belt tension is attained. Tighten nuts.

Figure 30
1. Pump belt

ADJUSTING CARBURETOR (Fig. 31)

IMPORTANT: Make sure engine has warmed up, choke is operating correctly, fuel tank is full, fuel tank cap vent is not blocked, fuel filter is clean and air cleaner element is clean and all components are fastened securely before adjusting the carburetor.

1. Raise bed (if so equipped) and place a safety support under it to hold up bed.
2. Low Idle Mixture Adjusting Needle — Close adjusting needle by gently rotating it clockwise.

IMPORTANT: Do not close the screw too tightly because the screw will likely be damaged.

Figure 31

1. Low idle mixture adjusting needle
2. Low idle speed adjusting screw

3. Rotate—open the adjusting needle— 1–5/8 turns counterclockwise.

WARNING

Engine must be running so final adjustment of the carburetor can be performed. To guard against possible personal injury, keep hands, feet, face and other parts of the body away from muffler, engine and other moving or rotating parts.

4. Start engine and let it run for 5–10 minutes. Engine must be warm before making final adjustments. Check to make sure throttle and choke plates open fully.
5. With engine idling, turn low idle speed adjusting screw in or out to obtain a low idle speed of 1200 ± 100 rpm. Check speed with a tachometer.
6. Turn the low idle mixture adjusting needle in (slowly) until engine speed decreases and then back it out approximately 3/4 to 1 turn to obtain the best low speed performance.
7. Recheck idle speed using a tachometer and readjust if necessary.

MAINTENANCE

ADJUSTING CHOKE

1. Raise bed (if so equipped) and place a safety support under it to hold up bed.
2. Loosen cable clamp screw securing cable to engine.
3. Push choke knob down to OFF position.
4. Push choke cable firmly toward operators side of vehicle and tighten cable clamp screw.

REPLACING SPARK PLUGS (Fig. 32)

Replace spark plugs after every 800 operating hours to assure proper engine performance and reduce exhaust emission level.

Correct spark plug to use is a Champion RC 12YC or equivalent.

Recommended air gap is .040".

Note: The spark plug usually lasts a long time; however, the plug should be removed and checked whenever the engine malfunctions.

1. Clean area around spark plugs so foreign matter cannot fall into cylinder when spark plug is removed.
2. Pull spark plug wires off spark plugs and remove plugs from cylinder head.
3. Check condition of side electrode, center electrode, and center electrode insulator to assure there is no damage.

Figure 32

IMPORTANT: A cracked, fouled, dirty or otherwise malfunctioning spark plug must be replaced. Do not sand blast, scrape, or clean electrodes by using a wire brush because grit may eventually release from the plug and fall into the cylinder. The result is usually a damaged engine.

4. Set air gap between center and side of electrodes at .040". Install correctly gapped spark plug and tighten plug to 18–22 ft–lb. If torque wrench is not used, tighten plug firmly.
5. Install spark plug wires.

ADJUSTING ACCELERATOR (Fig. 33)

Check adjustment every 200 hours.

1. Position vehicle on level surface, stop engine and engage the parking brake.
2. With return spring installed, hold engine governor arm toward operator's side of vehicle and adjust low idle stop to obtain a .01" – .05" gap between O.D. of hole in throttle lever and inside of governor spring hook.

Figure 33

- | | |
|------------------------|--------------------|
| 1. Return spring | 5. Governor spring |
| 2. Engine governor arm | 6. High idle stop |
| 3. Low idle stop | 7. Ball joint |
| 4. Throttle lever | |

WARNING

Engine must be running so final adjustment of the accelerator can be performed. To guard against possible personal injury, engage parking brake and keep hands, feet, face and other parts of body away from any moving parts.

3. Start engine and allow it to warm up to normal operating temperature. Verify low idle setting of 1200 ± 100 rpm.
4. Adjust high idle stop to obtain 3600 ± 50 rpm when throttle lever contacts stop.
5. Stop engine.
6. Adjust ball joint on accelerator cable and/or cable jam nuts while throttle lever is against high idle stop to allow .100" – .250" of clearance between accelerator pedal arm and top of diamond tread floor plate, when a 25 lb. force is applied to center of pedal. Tighten locknut.

Note: Engine must not be running and return spring must be attached.

MAINTENANCE

CHANGING TRANSAXLE / HYDRAULIC FLUID (Fig. 34)

Change Transaxle hydraulic fluid, filter and clean strainer every 600 hours.

1. Position the vehicle on a level surface, stop engine, engage the parking brake and remove key from ignition switch.
2. Remove drain plug from side of reservoir and let hydraulic fluid flow into drain pan. Reinstall and tighten plug when hydraulic fluid stops draining.

Figure 34
1. Hydraulic Reservoir
2. Drain plug

3. Fill reservoir with approximately 7.5 qt. of Dexron III ATF. Refer to Checking Hydraulic Fluid.
4. Start engine and operate to fill hydraulic system. Recheck oil level and replenish, if required.

IMPORTANT: Use only hydraulic fluids specified. Other fluids could cause system damage.

REPLACING HYDRAULIC FILTER (Fig. 35)

Use the Toro replacement filter (Part No. 54-0110).

IMPORTANT: Use of any other filter may void the warranty on some components.

1. Position vehicle on a level surface, stop engine, engage the parking brake and remove key from ignition switch.
2. Clean area around filter mounting area. Place drain pan under filter and remove filter.
3. Lubricate new filter gasket.

Figure 35
1. Hydraulic Filter
2. Gasket

4. Assure filter mounting area is clean. Screw filter on until gasket contacts mounting plate. Then tighten filter one-half turn.
5. Start engine and let run for about two minutes to purge air from the system. Stop the engine and check the hydraulic oil level and for leaks.

CLEANING HYDRAULIC STRAINER (Fig. 36)

1. Position the vehicle on a level surface, stop engine, engage the parking brake and remove key from ignition switch.
2. Remove drain plug (Fig. 34) from side of reservoir and let hydraulic fluid flow into drain pan.
3. Note orientation of hydraulic hose and 90° fitting connected to strainer on side of reservoir. Remove hydraulic hose and 90° fitting.
4. Remove strainer and clean by back flushing with a clean degreaser. Allow to air dry before reinstalling.

Figure 36
1. Hydraulic strainer

5. Reinstall strainer.

MAINTENANCE

6. Reinstall hydraulic hose and 90° fitting to strainer in same orientation.
7. Reinstall and tighten drain plug.
8. Fill reservoir with approximately 7.5 qt. of Dexron II ATF. Refer to Checking Hydraulic Fluid.

ADJUSTING BRAKE PEDAL (Fig. 37–38)

Check adjustment every 200 hours.

1. Loosen jam nut on link rod ball joint.
2. Rotate rod until gap between brake pedal and up stop is .020–.080".
3. Tighten jam nut after adjustment has been attained.

Figure 37
1. Link rod ball joint

Figure 38
1. Brake pedal
2. Clutch pedal
3. Clutch pedal upstop

ADJUSTING CLUTCH PEDAL (Fig. 39–40)

Check adjustment every 200 hours.

1. Loosen jam nuts securing clutch cable to bracket on bell housing.
2. Disconnect return spring from clutch lever.

3. Adjust jam nuts until bottom rear edge of clutch pedal is 3.75" \pm .12" from top of floor plate diamond pattern, when an 4 lb. force is applied to pedal.

Note: Force is applied so release bearing lightly contacts pressure plate fingers.

4. Reconnect return spring to clutch lever.

5. Verify that rear edge of clutch pedal is 5.5" \pm .12" from top of floor plate diamond pattern. If dimension is not attained, adjust clutch pedal up stop.

Note: The clutch free play should never be less than .75".

Figure 39

1. Clutch cable
2. Jam nuts
3. Return spring

6. Tighten jam nuts after adjustment has been attained.

7. Recheck clutch safety switch adjustment (Fig. 40). Engine must not crank unless clutch pedal is 1.25" \pm .12" from floor. If an adjustment is required, loosen switch jam nuts and adjust up or down.

Figure 40
1. Clutch switch

MAINTENANCE

ADJUSTING PARKING BRAKE (Fig. 41)

Check adjustment every 200 hours.

1. Loosen set screw securing knob to parking brake lever.
2. Rotate knob until a force of 55–65 lbs. is required to actuate lever.
3. Tighten set screw after adjustment has been attained.

Figure 41

1. Parking brake lever
2. Knob
3. Set screw

ADJUSTING SHIFT CABLES

Check adjustment every 200 hours.

1. Move shift lever to Neutral position.
2. Remove clevis pins securing shift cables to transaxle shift arms.
3. Loosen clevis jam nuts and adjust each clevis so cable free play is equal forward and backward relative to hole in transaxle shift arm (With transaxle lever free play taken up in same direction).
4. Reinstall clevis pins and tighten jam nuts after adjustments have been attained.

INSPECT BRAKES

Visually inspect brakes for worn brake shoes after every 400 hours of operation.

INSPECT TIRES

Check tire condition at least every 100 hours of operation. Operating accidents, such as hitting curbs, can damage a tire or rim and also disrupt wheel alignment, so inspect tire condition after an accident.

FRONT WHEEL TOE-IN (Fig. 42–43)

After every 400 operating hours or annually, check front wheel toe-in.

1. Measure center-to-center distance (at axle height) at front and rear of steering tires. Front measurement must be equal to the rear measurement $\pm 1/8$ in..

Figure 42

2. To adjust, loosen jam nuts at both ends of tie rod.
3. Rotate tie rod to move front of tire inward or outward.

Figure 43

1. Tie rod

4. Tighten tie rod jam nuts when adjustment is correct.

FUSES (Fig. 44)

There are 3 fuses in the machine's electrical system. They are located under right side of dash panel.

Figure 44

DASH	7.5A
IGNITION	7.5A

MAINTENANCE

JUMP STARTING PROCEDURE

WARNING

Jump starting can be dangerous. To avoid personal injury or damage to electrical components in vehicle, observe the following warnings:

- **Never jump start with a voltage sources greater than 15 volts D.C. This will damage the electrical system.**
- **Never attempt to jump start a discharged battery that is frozen. It could rupture or explode during jump starting.**
- **Observe all battery warnings while jump starting your vehicle.**
- **Be sure your vehicle is not touching the jump start vehicle.**
- **Connecting cables to the wrong post could result in personal injury and/or damage to the electrical system.**

1. Loosen knobs securing battery cover to battery base and slide cover off.
2. Connect a jumper cable between the positive posts of the two batteries. The positive post may be identified by a "+" sign on top of battery cover.

Figure 45
1. Positive (+) cable

3. Connect one end of the other jumper cable to the negative terminal of the battery in the other vehicle. The negative terminal has "NEG" on the battery cover. Do not connect the other end of the the jumper cable to the negative post of the discharged battery. Connect it to the engine. Do not connect the jumper cable to the fuel system.
4. Start the engine in the vehicle providing the jump start. Let it run a few minutes, then start your engine.

5. Remove the negative jumper cable first from your engine, then the battery in the other vehicle.
6. Reinstall battery cover to battery base and tighten knobs.

BATTERY STORAGE

If the machine will be stored for more than 30 days, remove the battery and charge it fully. Either store it on the shelf or on the machine. Leave the cables disconnected if stored on the machine. Store the battery in a cool atmosphere to avoid quick deterioration of the charge in the battery. To prevent battery from freezing, make sure it is fully charged. The specific gravity of a fully charged battery is 1.250.

BATTERY CARE

1. Battery electrolyte level must be properly maintained and the top of the battery kept clean. If the machine is stored in a location where temperatures are extremely high, the battery will run down more rapidly than if the machine is stored in a location where temperatures are cool.

CAUTION

Wear safety goggles and rubber gloves when working with electrolyte. Charge the battery in a well ventilated place so gasses produced while charging can dissipate. Since the gases are explosive, keep open flames and electrical spark away from the battery; do not smoke. Nausea may result if the gases are inhaled. Unplug charger from electrical outlet before connecting to or disconnecting charger leads from battery posts.

2. Keep top of battery clean by washing periodically with a brush dipped in ammonia or bicarbonate of soda solution. Flush the top surface with water after cleaning. Do not remove the fill cap while cleaning.
3. Battery cables must be tight on terminals to provide good electrical contact.
4. If corrosion occurs at terminals, remove battery cover, disconnect cables, negative (–) cable first and scrape clamps and terminals separately. Reconnect cables, positive (+) cable first and coat terminals with petroleum jelly.
5. Check the electrolyte level every 50 operating hours or, if machine is in storage, every 30 days.
6. Maintain cell level with distilled or demineralized water. Do not fill cells above the bottom of the fill ring inside each cell.

HYDRAULIC SCHEMATIC

(Base Vehicle)

ELECTRICAL SCHEMATIC

T-3298

IDENTIFICATION AND ORDERING

MODEL AND SERIAL NUMBERS

The WORKMAN® 3100 has two identification numbers: a model number and a serial number. These numbers are stamped into a plate located on the right frame member under dash. In any correspondence concerning the unit, supply the model and serial numbers to ensure correct information and replacement parts are obtained.

Note: Do not order by reference number if a parts catalog is being used; use the part number.

To order replacement parts from an authorized TORO Distributor, supply the following information:

1. Model and serial numbers.
2. Part number, description, and quantity of parts desired.

NOTES

The Toro Industrial Products One Year Limited Warranty

The Toro Company warrants your Toro Industrial Product ("Product") to be free from defects in materials or workmanship for the period of time listed below. Where a warrantable condition exists, Toro will repair the Product at no cost to you including diagnosis, labor, parts, and transportation. This warranty begins on the date the Product is delivered to the original retail purchaser.

Warranty Duration: One year or 1500 operational hours*, whichever occurs first.

***Product equipped with hour meter**

Owner Responsibilities:

As the Product owner, you are responsible for required maintenance and adjustments stated in your Owner's Manual. Failure to perform required maintenance and adjustments can be grounds for disallowing a warranty claim.

Instructions for Obtaining Warranty Service:

You are responsible for notifying the Industrial Products Distributor or Authorized Industrial Products Dealer from whom you purchased the Product as soon as you believe a warrantable condition exists.

If you need help locating a Industrial Products Distributor or Authorized Dealer, or if you have questions regarding your warranty rights or responsibilities, you may contact us at:

Toro Commercial Products Service Department
8111 Lyndale Avenue South
Minneapolis, MN, 55420-1196
Telephone: (612) 888-8801
Facsimile: (612) 887-8258
E-Mail: Commercial.Service@Toro.Com

Maintenance Parts:

Parts scheduled for replacement as required maintenance ("Maintenance Parts"), are warranted for the period of time up to the scheduled replacement time for that part.

Items/Conditions Not Covered:

Not all product failures or malfunctions that occur during the warranty period are defects in materials or workmanship. The items / conditions listed below are not covered by this warranty:

- Product failures which result from the use of non-Toro replacement parts, or from installation and use of add-on, modified, or unapproved accessories are not covered.
- Product failures which result from failure to perform required maintenance and/or adjustments are not covered.
- Product failures which result from operating the Product in an abusive, negligent or reckless manner are not covered.

- This warranty does not apply to parts subject to consumption through use unless found to be defective. Examples of parts which are consumed, or used up, during normal Product operation include, but are not limited to tines, spark plugs, castor wheels, tires, filters, belts, etc.
- This warranty does not apply to failures caused by outside influence. Items considered to be outside influence include, but are not limited to, weather, storage practices, contamination, use of unapproved coolants, lubricants, additives, or chemicals, etc.
- This warranty does not apply to normal "wear and tear" items. Normal "Wear and Tear" includes, but is not limited to, damage to seats due to wear or abrasion, worn painted surfaces, scratched decals or windows, etc.

Other Legal Disclaimers:

The above remedy of product defects through repair by an authorized distributor or dealer is the purchaser's sole remedy for any defect. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Except for the Emissions warranty referenced below, if applicable, there is no other express warranty. All implied warranties of merchantability and fitness for use are limited to the duration of the express warranty.

Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

The Toro Company is not liable for indirect, incidental or consequential damages in connection with the use of the Product, including any cost or expense of providing substitute Product or service during periods of malfunction or non-use.

Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion may not apply to you.

Note to California residents: The Emissions Control System on your Product may be covered by a separate warranty meeting requirements established by the U.S. Environmental Protection Agency (EPA), or the California Air Resources Board (CARB). The hour limitations set forth above do not apply to the Emissions Control System Warranty. Refer to the California Emission Control Warranty Statement printed in your Owner's Manual or contained in the engine manufacturer's documentation for details.
