

Tethered Snapper Pin

Product: Reelmaster®

March 29, 2019

Affected Units:

Models:

Serial Numbers:

Reelmaster

RM 5010 Series

All

RM 7000

RM 3100

RM 35XX Series

Situation:

Toro has created a tethered pin to hold the cutting unit to the lift arm. The tether will retain either side of the pin in the event a pin breaks during operation which will keep the pin from damaging the reel or bedknife.

Instructions:

Pin and Lanyard assembly is part # 136-8045 and can be installed on most Reelmaster product to ensure pins are not lost and will not go through the reel if they break during operation. See Figure 1 for part image. Note - The small metal bracket attaches under the grease zerk on the lift arm.
