BATTERY CHARGING

If the battery has been exhausted by extensive use without charging, at least 48 hours is needed to restore full charge.

Use your TORO charger to replace energy removed from the battery POW-R-PACK. For continued peak performance and long life, the battery should be charged for 24 hours after each cutting. However, for convenience, the battery can be left on continuous charge when the mower is not in use.

To charge, proceed as follows:

1. Disconnect the connector from the receptacle on the battery POW-R-PACK.
2. The battery POW-R-PACK may be left on the mower

when charging, or it may be removed for charging at a more convenient location. Remove the key and flex the mounting tabs slightly and the container will pivot down and off from the mower.

3. Insert the charger connector into the receptacle on the battery POW-R-PACK.
4. Insert the charger into a 115 VAC, single phase, 60 cycle outlet.
5. The battery is now on charge and will remain so until the charger is removed.

NOTE: Use only the Toro battery charger supplied with your mower. Any other brand of charger may permanently damage the battery POW-R-PACK.

OFF SEASON STORAGE OF BATTERY POW-R-PACK

If the battery POW-R-PACK has not been used for an extended period of time (winter storage, brand new in the carton, etc.), you should charge it for 48 hours or more to restore full charge.

During the off season storage your battery POW-R-PACK may be left on the mower or removed and stored in a separate location. It is recommended that the battery POW-R-PACK be stored in a cool, dry area during off season storage.

DO NOT leave the battery POW-R-PACK on charge throughout a winter storage period; this will shorten the useful life of the battery POW-R-PACK. During this

time of idleness, the battery will lose some or all of its charge and may not be able to start the mower the following spring. Therefore, you will want to charge it for a minimum of 48 hours at the start of the season to restore full charge.

DISCARDING OLD BATTERIES:

If you need to purchase a new battery POW-R-PACK, go to your local TORO Service Dealer. He will have the proper battery to fit your mower.

DO NOT DISPOSE OF THE OLD BATTERY IN FIRE AS IT MAY EXPLODE.

ATTENTION: INOPERATIVE STARTER

Should starter gears not engage and prevent engine from rotating, disconnect spark plug wire and remove shroud insert. Turn the cup on the engine COUNTERCLOCKWISE until the gears break free. Replace shroud insert and reconnect spark plug wire. Your mower is now ready to operate.

MOUNTING THE STARTER MOTOR

Although mounting the starter motor to the engine is not particularly difficult, we would like to recommend the following instructions:

1. Starter motor should be as near vertical as possible.
2. With Bendix gear disengaged, there should be at least 1/8" CLEARANCE between the upper face of the Bendix gear and the lower face of the flywheel gear (see Figure 1).
3. Rotate the flywheel until the engine is "on compression". With fingers, roll the Bendix gear up the starter shaft and engage flywheel gear. Gear teeth "backlash" at this point should be .010". (See Figure 2)

This procedure will assure proper alignment, correct gear tooth engagement, and eliminate "binding" problems which might otherwise occur.

CARBURETOR ADJUSTMENTS

Do not make unnecessary adjustments. Factory settings are correct for most applications. If adjustments are needed, proceed as follows:

CAUTION: DO NOT FORCE-TIGHTEN NEEDLE. PERMANENT DAMAGE MAY RESULT.

1. Close power adjusting needle "A" by turning to right (clockwise). Close finger tight only.
2. Open one turn (counterclockwise).
3. Close idle adjusting needle "B", turning to right (clockwise). Close finger tight only.
4. Open five/eighths (5/8) turn (counterclockwise).
5. Start engine. With throttle open (carburetor control at RUN or FAST position), adjust power adjusting needle one/eighth (1/8) turn at a time, forward or backward until engine runs smoothly. If engine tends to stall under load, enrich mixture slightly (counterclockwise).
6. Hold throttle lever closed or move carburetor control to IDLE or SLOW position and adjust idle adjusting needle until engine runs smoothly, proceeding as in step five (5) above. To obtain idle speed, adjust screw "C".
7. Allow several seconds between each adjustment when performing either step 5 or 6 to allow engine to react to new setting.
8. Maximum engine speeds are preset at factory and should not be changed except by a qualified Toro Service Station repairman who has the necessary equipment.
9. **IMPORTANT:** Air cleaner should always be checked or cleaned first prior to carburetor adjustments. In many cases a dirty air cleaner results in unnecessary carburetor adjustments. (See below for cleaning air cleaner.)

CLEANING ENGINE AIR CLEANER

To clean, proceed as follows:

1. To remove air cleaner cover, grasp tab and lift off.
2. Remove polyurethane element.
3. Wash in detergent and water solution by squeezing similar to a sponge. Squeeze out cleaning solution and shake dry.
4. Re-oil element by applying a generous quantity (5 teaspoons) of engine oil to sides and open end. Squeeze to distribute oil and to remove excess oil.
5. Re-install the element and air cleaner cover.
6. Dusty conditions may require more frequent cleaning.

STORAGE INSTRUCTIONS

In event engine is to be stored for any length of time (30 days or more) or at the end of mowing season, prepare as follows:

1. Drain by tipping or by syphon hose; then run engine until remainder is used and tank and carburetor are empty.

CAUTION: Drain into container outdoors away from fire or flame.

2. Drain carburetor. Float bowl carburetors are drained by pressing upward on bowl drain.
3. Inside protection of engine for storage is performed by removing spark plug and pouring one ounce of S.A.E. 30 oil through spark plug hole into cylinder. Crank engine without starting several times to spread oil over cylinder walls. Replace spark plug.

SPECIFICATIONS

ENGINE: LAV35-40534H

ENGINE SHROUD: Rigid polyethylene

FUEL TANK CAPACITY: One quart

CUTTER BLADE: 21" long. Heat treated. "S" shape, attached to shaft with welded retainer and special 7/16-20 capscrew and lockwasher.

TIP SPEED: 18,700 at 3400 engine rpm; 17,600 at 3200 engine rpm.

TRACTION CLUTCH: Hand operated lever and control wire system mounted on escutcheon plate on upper handle which operates spiral jaw clutch in gear case on drive shaft.

FRONT WHEEL TRACTION DRIVE: Special 3L V-belt, with an approximately 10 degree misalignment, running between 2 pulleys. The steel engine shaft pulley, integral with the blade and hub, has a 2.0 eff. p.d., the powdered iron worm shaft pulley, held with a tolerance ring, has a 2.5 eff. p.d. The engine to gear box reduction is 1.27:1.

GEAR CASE: Die cast aluminum case. Hardened and polished four thread steel worm supported by ball bearing. (6.25:1 red.) Lube requirement 2 oz. SAE 90 with extreme pressure characteristics.

WHEEL REDUCTION: 14T hardened steel pinions on drive shaft supported by double sealed ball bearings to 42T laminated hardened steel external spur gears riveted to wheel (3:1 reduction).

REDUCTION, ENGINE TO WHEELS: 23.8:1

WHEELS: 18 gauge steel disc with oil impregnated metal bushings.

TIRES: Semi-pneumatic 8 x 1.75 Toro tread

GROUND SPEED: 3.20 mph at 3200 engine rpm
3.40 mph at 3400 engine rpm

HEIGHT-OF-CUT: 1" to 3" in ½" increments by moving wheels individually with leaf spring-type hand levers. ½" at front only.

THROTTLE CONTROL: Control wire and casing. Operating lever mounted to escutcheon plate on upper handle. Stop, run and choke positions. Detented 2 speed control for 2800 and 3300 RPM.

WIDTH OF CUT: 21 inches

HOUSING: Die cast aluminum alloy, spiral grass chamber, right hand discharge. Symmetrical wheel location, hinged chute deflector.

FOLDING HANDLE: ¾" O.D. x 16 gage welded steel tubing in two separable halves. Chrome plated. No tool, positive 3-position handle height adjustment plus choice of upright or folded storage position.

DIMENSIONS: Width: 24½"
Length: 32½"
Height: 14½"

WEIGHT: 71 lbs. total, 24 lbs. front wheels, 43 lbs. rear wheels. 16 lbs. to lift front wheel at medium handle height.

STANDARD EQUIPMENT: Grass bag assembly; bagging attachment, bag hanger, anti-scalp cup, washout plug, dipstick oil gauge, removable battery box, key switch, battery charger, emergency starter rope, prismatic gas gauge, rear safety shield, below deck muffler.

MECHANICAL GOVERNOR ADJUSTMENTS

1. Loosen governor lever screw.
2. Hold throttle lever in wide open position.
3. Rotate governor lever clamp as far as possible in direction shown by arrow.
4. Tighten governor lever screw.

IMPORTANT ORDERING INSTRUCTIONS

Repair parts are available from your TORO dealer. To insure getting correct parts without delay, furnish the following information:

1. Serial number of your mower as shown on name plate.
2. Part number, description and quantity of each part required.

3. State whether parts should be shipped by mail or express. All repair parts are shipped F.O.B. factory.
4. Name and address where parts are to be shipped.
5. Do not order by reference number; use part number only.
