

Deck Lift Assist Kit

For Mid-Mount 200 Series Z-Masters

Model No. 78473

Parts Catalog

Ordering Replacement Parts

To order replacement parts, please supply: the part number, the quantity, and the description of each part desired.

Understanding Reference Numbers

Each identified part in an illustration has a reference number. The reference number for a part also appears in the parts list, along with other information about the part.

This catalog uses two special reference number formats, one to indicate parts in a service assembly and another to indicate the quantity of a given part in an illustration.

Service Assembly Reference Numbers

Parts in service assemblies have reference numbers in the form **a:b**. The **a** represents the reference number of the entire service assembly and the **b** represents a sequential number unique to each part within the service assembly.

For example, a wheel assembly might be identified by reference number **6**, the tire by **6:1**, the valve by **6:2**, and the wheel by **6:3**. When you order the assembly identified by reference number **6**, you receive all parts identified by reference numbers **6:1**, **6:2**, and **6:3**. However, you may also order any part individually.

Reference numbers of this type appear in illustrations and in part lists.

Reference Numbers Indicating Quantity

In an illustration, if a reference number indicates more than one part, the reference number has the form **nX y**. The **n** represents the quantity of the part, the **X** is the multiplication symbol, and the **y** represents the reference number.

For example, in an illustration, the reference number **2X 37** means that two of the parts identified by reference number **37** are indicated.

This diagram shows an exploded view of a mechanical assembly. The components are labeled with numbers 1 through 4:

- 1**: A complex bracket or housing component with multiple mounting points.
- 2**: A small circular component, possibly a washer or a small pulley, shown in two positions relative to the main assembly.
- 3**: A long, thin cylindrical rod or pin with threaded ends.
- 4**: A small circular component, similar to 2, shown at the top left of the assembly.

The assembly is shown in a perspective view, with dashed lines indicating the alignment and assembly path of the components. The main body of the assembly is a long, curved tube or pipe with a flange at one end and a bracket at the other.
