Subject: Availability of Pivot Shaft that is more resistant to bending.

A Pivot Pin made from stronger material is now available for more resistance to bending in demanding applications. If you experience repeat bending of the original Pivot Shaft, the condition may be improved by installing Pivot Shaft (94-5069). This is the same Pivot Pin used to support the heavier cutting units on the REELMASTER 2600. For identification, the stronger Pivot Shaft has a black surface coating. Parts are available through your local Toro distributor.
