### Groundsmaster® 3000 Traction Unit & Auxiliary Hydraulic Kit

<u>MODEL NUMBER:</u>	<u>SERIAL NUMBERS:</u>
30300	60000 - 79999
30301 and 30301TC	50000 - 79999
30302 and 30302TC	50000 - 79999
30726 (Aux. Hyd. Kit)	50000 - 79999

**Subject: Service intervals for Hydraulic Oil and Hydraulic Oil filter(s)**

The original manuals for the units identified above have incomplete hydraulic system maintenance information. The changes to the service intervals for the care and maintenance of the hydraulic system are listed below. The most significant items are the service intervals with Auxiliary Hydraulic Kit (30726) installed. Please make note of these important changes.

Change 1 (general maintenance information):

Standard hydraulic oil and filter change for the traction unit is now 800 hours with an initial change at 200 hours. The original published time frames involved an earlier change interval, therefore no equipment risk is present regardless of the interval used.

Change 2 (traction unit equipped with Hydraulic Kit 30726):

Change Hydraulic Oil and both Hydraulic Filters (traction unit system and Hydraulic Kit system) initially at 200 hours and thereafter at 400 hour intervals. The load and heat that this equipment generates requires earlier change intervals to ensure maximum component durability.
