Hydroject® 3000

<u>Model/Serial Range:</u>	<u>Model Number:</u>	<u>Serial Numbers:</u>
	09800	00000-99999

Subject: Availability of Prefilter and Prefilter/Regulator Kit.

If you have water supply pressure that exceeds 80 psi and/or a water source laden with contaminants, an in-line Pressure Regulator and Prefilter are recommended to protect your investment. The regulator controls the supply pressure to acceptable limits and the prefilter prevents the onboard machine filter from rapidly becoming plugged with debris. Excessive water pressure combined with a debris filled water filter can collapse the filter element allowing debris to contaminate the high pressure water system of the Hydroject.

Prefilter/Regulator Kit (92-9541) and Prefilter Kit (92-9544) are available through your local Toro distributor.
