Subject: Interchangeability of Four Wheel Drive Tires.

Installing aftermarket tires to the front and/or rear of the Workman 4wd will affect the tire diameter ratio from the front to the rear tire. The correct tire diameter ratio is important to ensure correct operation of the 4WD clutch. Changing the ratio can also cause the front drive wheels to be continuously locked in 4wd that may result in turf scuffing problems and accelerated drive line wear/damage.

To avoid this issue, use the original replacement tires approved for the machine. These tires are available through your local Toro distributor.

Original Tire Part Numbers:

- ❖ Front Tire (87-3300)
- ❖ Rear Tire (87-6740)
