Subject: Throttle Bracket Flexes and Breaks

To provide a more solid feel to the throttle and strengthen the support at the Control Bracket, Throttle Support Strap (106-8449) is now available as a product improvement. The part is available at no charge through your local Toro distributor for you to install at your convenience. Contact your local Toro distributor if you are interested in obtaining this improvement. The figure below shows the Support Strap in position. The only adjustment required is to compress the spring sufficiently to retain the throttle lever in a set position.
