

Count on it.

Operator's Manual

66cm Heavy-Duty Rear Bagger Lawn Mower

Model No. 22200TE—Serial No. 270000001 and Up

Introduction

Read this information carefully to learn how to operate and maintain your product properly and to avoid injury and product damage. You are responsible for operating the product properly and safely.

You may contact Toro directly at www.Toro.com for product and accessory information, help finding a dealer, or to register your product.

Whenever you need service, genuine Toro parts, or additional information, contact an Authorized Service Dealer or Toro Customer Service and have the model and serial numbers of your product ready. Figure 1 identifies the location of the model and serial numbers on the product. Write the numbers in the space provided.

Safety

Improperly using or maintaining this mower can result in injury. To reduce the potential for injury, comply with these safety instructions.

Toro designed and tested this mower for reasonably safe service; however, failure to comply with the following instructions may result in personal injury.

To ensure maximum safety, best performance, and to gain knowledge of the product, it is essential that you and any other operator of the mower read and understand the contents of this manual before the engine is ever started. Pay particular attention to the safety alert symbol (Figure 2) which means Caution, Warning, or Danger—“personal safety instruction.” Read and understand the instruction because it has to do with safety. Failure to comply with the instruction may result in personal injury.

General mower Safety

The following instructions have been adapted from the ISO standard 5395.

This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

Training

- Read the instructions carefully. Be familiar with the controls and the proper use of the equipment.
- Never allow children or people unfamiliar with these instructions to use the mower. Local regulations can restrict the age of the operator.
- Keep in mind that the operator or user is responsible for accidents or hazards occurring to other people or their property.
- Understand explanations for all pictograms used on the mower or in the instructions.

Gasoline

WARNING-Gasoline is highly flammable. Take the following precautions.

- Store fuel in containers specifically designed for this purpose.
- Refuel outdoors only and do not smoke while refueling.
- Add fuel before starting the engine. Never remove the cap of the fuel tank or add gasoline while the engine is running or when the engine is hot.

- If gasoline is spilled, do not attempt to start the engine but move the mower away from the area of spillage and avoid creating any source of ignition until gasoline vapors have dissipated.
- Replace all fuel tank and container caps securely.

Preparation

- While mowing, always wear substantial footwear and long trousers. Do not operate the equipment when barefoot or wearing open sandals.
- Thoroughly inspect the area where the equipment is to be used and remove all stones, sticks, wires, bones and other foreign objects.
- Before using, always visually inspect to see that guards, and safety devices, such as deflectors and/or grass catchers, are in place and working correctly.
- Before using, always visually inspect to see that the blades, blade bolts and cutter assembly are not worn or damaged. Replace worn or damaged blades and bolts in sets to preserve balance.

Starting

- Disengage all blade and drive clutches and shift into neutral before starting the engine.
- Do not tilt mower when starting the engine or switching on the motor, unless the mower has to be tilted for starting. In this case, do not tilt it more than absolutely necessary and lift only the part, which is away from the operator.
- Start the engine or switch on the motor carefully according to instructions and with feet well away from the blade(s) and not in front of the discharge chute.

Operation

- Never mow while people, especially children, or pets are nearby.
- Mow only in daylight or in good artificial light.
- Avoid operating the mower in wet grass, where feasible.
- Stay alert for holes in the terrain and other hidden hazards.
- Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
- Never pick up or carry a mower while the engine is running.
- Use extreme caution when reversing or pulling a pedestrian controlled mower towards you.
- Walk, never run.
- Slopes:

- Do not mow excessively steep slopes.
- Exercise extreme caution when on slopes.
- Mow across the face of slopes, never up and down and exercise extreme caution when changing direction on slopes.
- Always be sure of your footing on slopes.
- Use low throttle settings when engaging the traction-clutch, especially in high gears. Reduce speed on slopes and in sharp turns to prevent overturning or loss of control.
- Stop the blade if the mower has to be tilted for transportation when crossing surfaces other than grass and when transporting the mower to and from the area to be mowed.
- Do not operate the engine in a confined space where dangerous carbon monoxide fumes can collect.
- Stop the engine
 - whenever you leave the mower.
 - before refueling.
 - before removing the grass catcher.
 - before making height adjustment unless adjustment can be made from the operator's position.
- Stop the engine and disconnect the spark-plug wire.
 - before clearing blockages or unclogging chute.
 - before checking, cleaning or working on the mower.
 - after striking a foreign object, inspect the mower for damage and make repairs before restarting and operating the mower.
 - if mower starts to vibrate abnormally (check immediately).
- Reduce the throttle setting during engine shut down, and close the fuel valve at the conclusion of mowing.
- Watch out for traffic when crossing or near roadways.

Maintenance and Storage

- Keep all nuts, bolts and screws tight to be sure the equipment is in safe working condition.
- Do not use pressure cleaning equipment on machine.
- Never store the equipment with gasoline in the tank and inside a building where fumes can reach an open flame or spark.
- Allow the engine to cool before storing in any enclosure.
- To reduce the fire hazard, keep the engine, silencer, battery compartment and gasoline storage are free of grass, leaves, or excessive grease.

- Check grass catcher components and the discharge guard frequently and replace with manufacturer's recommended parts, when necessary.
- Replace worn or damaged parts for safety.
- Replace faulty silencers.
- If the fuel tank has to be drained, do this out-doors.
- Do not change the engine governor settings or overspeed the engine. Operating an engine at excessive speed can increase the hazard of personal injury.
- Be careful during adjustment of the mower to prevent entrapment of the fingers between moving blades and fixed parts of the mower.
- **To ensure the best performance and safety, purchase only genuine Toro replacement parts and accessories. Do not use *will fit* parts and accessories; they may cause a safety hazard.**

Sound Pressure

This unit has an equivalent continuous A-weighted sound pressure level at the operator ear of 88 dBA, based on measurements of identical machines per EN 11094 and EN 836.

Sound Power

This unit has an equivalent continuous A-weighted sound power level of 98 dBA, based on measurements of identical machines per EN 11094.

Vibration, Hand/arm

This unit does not exceed a hand/arm vibration level of 3.8 m/s², based on measurements of identical machines per EN 1033.

Safety and Instructional Decals

Safety decals and instructions are easily visible to the operator and are located near any area of potential danger. Replace any decal that is damaged or lost.

Manufacturer's Mark

1. Indicates the blade is identified as a part from the original machine manufacturer.

98-4387

1. Warning—wear hearing protection.

103-6328

1. Choke
2. Fast
3. Continuous variable setting
4. Slow
5. Engine—stop

110-4977

1. Thrown object hazard—do not operate the mower with out a bag in place.

110-4978

1. Warning—read the *Operator's Manual*.
2. Thrown object hazard—keep bystanders a safe distance from the machine.
3. Cutting, dismemberment hazard of hand or foot—stop the engine and remove the spark plug wire before performing any maintenance on the machine.
4. Cutting, dismemberment hazard of hand or foot—stay away from moving parts.
5. Warning—stop the engine before leaving the machine.

Setup

Loose Parts

Use the chart below to verify that all parts have been shipped.

Procedure	Description	Qty.	Use
1	Handle	1	Install the handle.
2	No parts required	–	Fill the crankcase with oil.

Note: Determine the left and right sides of the machine from the normal operating position.

1

Installing the Handle

Parts needed for this procedure:

1	Handle
---	--------

Procedure

1. Remove the handle fasteners from the left and right sides of the mower housing.
2. Remove the fasteners from the handle brackets on the left and right bottom ends of the handle.
3. Rotate the handle back into its operating position and install the fasteners as shown (Figure 3).

Figure 3

1. Carriage bolt and flanged
2. Hex head bolt, washer, and nut

4. Use the cable ties provided to secure the control cables to the handle.

2

Filling the Crankcase with Oil

No Parts Required

Procedure

The engine crankcase is shipped without oil. You must fill it with approximately 30 oz. (0.88 l) of oil before starting the engine. Refer to Checking the Engine Oil Level in Operation , page 9, for oil specifications and instructions.

Figure 6

- | | |
|----------|---------|
| 1. Choke | 3. Slow |
| 2. Fast | 4. Stop |

Operation

Note: Determine the left and right sides of the machine from the normal operating position.

Each time before you mow, make sure that the self-propel drive and the blade control bar and blade control lever operate properly. When you release the blade control bar, the blade and self-propel drive should stop. If they do not, contact an Authorized Service Dealer.

This machine produces sound levels in excess of 85dBA at the operator's ear and can cause hearing loss through extended periods of exposure.

Wear hearing protection when operating this machine.

Figure 7

1. Warning—wear hearing protection.

Checking the Engine Oil Level

Service Interval: Before each use or daily

Initially, fill the crankcase with 30 oz. (0.88 L) of oil. Use only high-quality SAE 30 or SAE 10W30 weight detergent oil that has the American Petroleum Institute (API) service classification SF, SG, SH, or SJ.

Oil Capacity	
With oil filter	30 ounces (0.88 L)
Without oil filter	24 ounces (0.70 L)

Before each use, ensure that the oil level is between the Add and Full marks on the dipstick (Figure 8).

Figure 8

1. Dipstick
2. Full
3. Add

Note: When the crankcase is empty, pour about 3/4 of the crankcase capacity of oil in the crankcase, then follow the procedure in this section.

1. Move the mower to a level surface.
 2. Clean around the dipstick (Figure 8).
 3. Remove the dipstick by rotating the cap counterclockwise and pulling it out.
 4. Wipe the dipstick clean with a clean cloth.
 5. Insert the dipstick into the filler neck, **but do not screw it in**.
 6. Remove the dipstick and read the oil level on the dipstick (Figure 8).
 7. If the oil level reading is below the Add mark on the dipstick, slowly pour only enough oil into the filler hole to raise the oil level to the Full mark on the dipstick.
- Important:** Do not overfill the crankcase with oil and run the engine; engine damage will result. Drain the excess oil until the oil level on the dipstick reads Full.
8. Insert the dipstick into the filler neck and rotate the cap clockwise until it is tight.

Filling the Fuel Tank with Gasoline

For best results, use clean, fresh, lead-free gasoline with an octane rating of 87 or higher. To ensure freshness, purchase only the quantity of gasoline that you expect to use in 30 days. Using unleaded gasoline results in fewer combustion deposits and longer engine life. You may use leaded gasoline if unleaded gasoline is not available.

Important: Do not add oil to the gasoline.

Important: Do not use methanol, gasoline containing methanol, gasohol containing more than 10% ethanol, premium gasoline, or white gas. Using these fuels can damage the engine's fuel system.

Important: Do not use gasoline that has been stored since the last mowing season or longer.

In certain conditions, gasoline is extremely flammable and highly explosive. A fire or explosion from gasoline can burn you and others and can damage property.

- Fill the fuel tank outdoors, in an open area, and when the engine is cold. Wipe up any gasoline that spills.
- Do not fill the fuel tank completely full. Add gasoline to the fuel tank until the level is 1/4 to 1/2 inch (6 to 13 mm) below the bottom of the filler neck. This empty space in the tank allows the gasoline to expand.
- Never smoke when handling gasoline, and stay away from an open flame or where a spark may ignite the gasoline fumes.
- Store gasoline in an approved fuel container and keep it out of the reach of children.
- Never buy more than a 30-day supply of gasoline.

When fueling, under certain circumstances, a static charge can develop, igniting the gasoline. A fire or explosion from gasoline can burn you and others and damage property.

- Always place gasoline containers on the ground and away from your vehicle before filling.
- Do not fill gasoline containers inside a vehicle or on a truck or trailer bed because interior carpets or plastic truck bed liners may insulate the container and slow the loss of any static charge.
- When practical, remove gasoline-powered equipment from the truck or trailer and refuel the equipment with its wheels on the ground.
- If this is not possible, then refuel such equipment on a truck or trailer from a portable container, not from a gasoline dispenser nozzle.
- If you must use a gasoline dispenser nozzle, keep the nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete.

Use a fuel stabilizer/conditioner regularly during operation and storage. A stabilizer/conditioner cleans the engine during operation and prevents gum-like varnish deposits from forming in the engine during periods of storage.

Important: Do not use fuel additives other than a fuel stabilizer/conditioner. Do not use fuel stabilizers with an alcohol base such as ethanol, methanol, or isopropanol.

1. Clean around the fuel tank cap (Figure 9).

Figure 9

1. Fuel tank cap

2. Remove the cap from the tank.
3. Fill the fuel tank with unleaded gasoline to within 1/4 to 1/2 inch (6 to 13 mm) from the top of the tank. **Do not fill into the filler neck.**

Important: Do not fill the tank more than 1/4 inch (6 mm) from the top of the tank because the gasoline must have room to expand.

4. Install the fuel tank cap and wipe up any spilled gasoline.

Starting the Engine

1. Connect the wire to the spark plug (Figure 10).

Figure 10

2. Open the fuel valve (Figure 11)

Figure 11

1. Fuel valve

3. Move the throttle control lever to the Choke position (Figure 6).

Note: You do not need to use the choke when the engine is warm.

4. Move the ground speed control lever to the Neutral (N) position.
5. Pull the starter handle lightly until you feel resistance, then pull it sharply.
6. When the engine starts, move the throttle and set the ground speed control as desired.

Note: If the engine fails to start after 3 pulls, repeat steps 3 through 6.

Stopping the Engine

1. Move the throttle control to the Stop position.
2. Disconnect the wire from the spark plug if you do not use the mower or leave it unattended.

Operating the Blade

Engaging the Blade

Service Interval: Before each use or daily

Note: When you start your engine, the blade does not turn. You must engage the blade to mow.

1. Pull the blade control bar to the handle and hold it (Figure 12).

Figure 12

1. Blade control bar
-
2. Move the blade control lever fully forward until the blade is engaged (Figure 13).

Figure 13

Disengaging the Blade

Release the blade control bar.

Important: When you release the blade control bar, the blade should stop within 3 seconds. If it does not stop properly, stop using your mower immediately and contact an Authorized Service Dealer.

Operating the Traction Drive

Engaging the Traction Drive

1. Release the traction control bar (Figure 14).

Figure 14

1. Traction control bar
 2. Throttle
-
2. Move the ground speed control lever to the desired gear position.
 3. Squeeze the traction control bar against the handle (Figure 15).

Figure 15

Disengaging the Traction Drive

Release the traction control bar.

Checking the Blade Brake Clutch

Check the blade control bar and the blade control lever before each use to ensure that the blade brake clutch system is operating properly.

You can use the grass bag to perform an additional test to check the blade brake clutch mechanism:

1. Install the empty grass bag on the discharge tunnel.
2. Start the engine.
3. Engage the blade.
4. Release the blade control bar. If the bag does not immediately deflate, it indicates that the blade is still rotating. The blade brake clutch mechanism may be deteriorating, and, if ignored, could result in an unsafe operating condition. Have the mower inspected and serviced by an Authorized Service Dealer.

If the blade brake clutch system is inoperative, the blade will continue to rotate when you release the blade control bar. Contact with blade could occur, causing serious injury.

- Check the blade brake clutch operation before each use.
- Never use a mower equipped with a blade brake clutch that has an inoperative safety system.
- Take your mower to an Authorized Service Dealer for repair if the safety system fails to operate properly.

Adjusting the Cutting Height

The front wheels are adjusted individually with a wheel height adjustment lever (Figure 16). The rear wheels are adjusted together with a wheel height adjustment lever located above the left rear wheel (Figure 17).

Cutting heights are 1 inch (25 mm), 1-1/2 inches (38 mm), 2 inches (51 mm), 2-1/2 inches (64 mm), 3 inches (76 mm), and 3-1/2 inches (89 mm), and 4 inches (102 mm).

Note: Adjust all the wheels to the same cutting height setting.

Adjusting the cutting height levers could bring your hands into contact with a moving blade and result in serious injury.

- Stop the engine and wait for all movement to stop before adjusting the cutting height.
- Do not put your fingers under the housing when adjusting the cutting height.

Adjusting the Front Cutting Height

1. Pull each of the front wheel height adjustment levers toward the wheel (Figure 16) and move it to the desired setting.

Figure 16

1. Wheel height adjustment lever (at the highest setting)
2. Wheel height adjustment lever (at the lowest setting)

2. Release the wheel height adjustment lever and seat it securely in the notch.

Adjusting the Rear Cutting Height

1. Pull the rear wheel height adjustment lever out and move it to the desired setting (Figure 17).

Figure 17

1. Wheel height adjustment lever (at the highest setting)
2. Wheel height adjustment lever (at the lowest setting)

2. Release the lever and seat it securely in the desired notch.

Using the Grass Bag

Installing the Grass Bag

1. Wait for all moving parts to stop.
2. Raise and hold up the rear door (Figure 18).

Figure 18

1. Rear door
2. Bag support tabs

3. Set the bag frame on the bag support tabs (Figure 18).
4. Lower the rear door onto the bag.

Removing the Grass Bag

To remove the bag, reverse the steps above.

The mower can throw grass clippings and other objects through an open discharge tunnel. Objects thrown with enough force could cause serious personal injury or death to the operator or bystander.

Do not operate the mower without a grass bag installed.

Mowing with the Grass Bag

A worn grass bag could allow small stones and other similar debris to be thrown in the operator's or bystander's direction and result in serious personal injury or death to the operator or bystanders.

Check the grass bag frequently. If it is damaged, install a new Toro replacement bag.

Operating Tips

General Tips

- Maintain a sharp blade throughout the cutting season. Periodically file down nicks on the blade.
- Replace the blade when necessary with an original Toro replacement blade.
- Mow only dry grass or leaves. Wet grass and leaves tend to clump on the yard and can cause the mower to plug or the engine to stall.

Wet grass or leaves can cause serious injury if you slip and contact the blade.

Mow only in dry conditions.

- Clean under the mower housing after each mowing. See Cleaning under the Mower Housing.
- Keep the engine in good running condition.
- Set the engine speed to the fastest position for the best cutting results.

Operating a mower with its engine running at a speed greater than the factory setting can cause the mower to throw a part of the blade or engine into the operator's or bystander's area and result in serious personal injury or death.

- **Do not change the engine speed setting.**
- **If you suspect the engine speed is faster than normal, contact an Authorized Service Dealer.**

- Clean the air filter frequently. Mulching stirs up more clippings and dust which clogs the air filter and reduces engine performance.

Cutting Grass

- Grass grows at different rates at different times of the year. In the summer heat, it is best to cut grass at the 2-1/2 inch (64 mm), 3 inch (76 mm), or 3-1/2 inch (89 mm) cutting height settings. Cut only about a third of the grass blade at a time. Do not cut below the 2-1/2 inch (64 mm) setting unless the grass is sparse or it is late fall when grass growth begins to slow down.
- When cutting grass over 6 inches (15 cm) tall, first mow at the highest cutting height setting and walk slower; then mow again at a lower setting for the best lawn appearance. If the grass is too long and the leaves clump on top of the lawn, the mower may plug and cause the engine to stall.
- Alternate the mowing direction. This helps disperse the clippings over the lawn for even fertilization.

If the finished lawn appearance is unsatisfactory, try one or more of the following:

- Sharpen the blade.
- Walk at a slower pace while mowing.
- Raise the cutting height on your mower.
- Cut the grass more frequently.
- Overlap cutting swaths instead of cutting a full swath with each pass.
- Set the cutting height on the front wheels one notch lower than the rear wheels. For example, set the front wheels at 2-1/2 inches (64 mm) and the rear wheels at 3 inches (76 mm).

Cutting Leaves

- After cutting the lawn, ensure that half of the lawn shows through the cut leaf cover. You may need to make more than one pass over the leaves.

- For light leaf coverage, set all the wheels at the same cutting height setting.
- If there are more than 5 inches (12.7 cm) of leaves on the lawn, set the front cutting height 1 or 2 notches higher than the rear cutting height. This makes it easier to feed the leaves under the mower housing.
- Slow down your mowing speed if the mower does not cut the leaves finely enough.
- If you mow over oak leaves, you can add lime to the grass in the spring to reduce the acidity of the oak leaves.

Maintenance

Note: Determine the left and right sides of the machine from the normal operating position.

Recommended Maintenance Schedule(s)

Maintenance Service Interval	Maintenance Procedure
After the first 5 hours	• Change the engine oil.
Before each use or daily	• Check the engine oil level. • Ensure that the blade stops within 3 seconds after releasing the blade control bar. • Check the blade brake cable adjustment and adjust the cable if necessary. • Check the mower blade for wear or damage. • Check the blade and the engine mounting fasteners and tighten them if they are loose. • Clean under the mower housing. • Clean the discharge tunnel.
Every 50 hours	• Lubricate the pivot arms. • Lubricate the gear case. • Change the engine oil without the oil filter (more often in dusty conditions). • Check for leaks in the fuel system and/or a deteriorating fuel hose; replace parts if necessary. • Sharpen or replace the blade; maintain it more frequently if the edge dulls quickly in rough or in sandy conditions. • Clean under the belt cover.
Every 75 hours	• Adjust the self-propel drive system.
Every 100 hours	• Clean the paper air filter (more frequently in dusty conditions). • Change the oil filter. • Check the spark plug and replace it if necessary. • Adjust the blade brake cable.
Every 300 hours	• Replace the paper air filter (more frequently in dusty conditions). • Empty the fuel tank before repairs as directed or before storage.
Yearly	• Clean the fuel filter.

Important: Refer to your *Engine Operator's Manual* for additional maintenance procedures.

If you leave the wire on the spark plug, someone could accidentally start the engine and seriously injure you or other bystanders.

Disconnect the wire from the spark plug before you do any maintenance. Set the wire aside so that it does not accidentally contact the spark plug.

Lubrication

Lubricating the Pivot Arms

Service Interval: Every 50 hours

After every 50 operating hours or when the season ends, lubricate the pivot arms.

1. Move the rear wheel cutting height levers to the center setting.
2. Disconnect the wire from the spark plug (Figure 10).
3. Drain the gasoline from the fuel tank; refer to Emptying the Fuel Tank and Cleaning the Fuel Filter.
4. Tip the mower onto its **right** side.
5. Wipe the grease fittings with a clean rag (Figure 19).

Note: The grease fittings are located near the rear wheels.

Figure 19

6. Install a grease gun onto the fitting and gently apply 2 or 3 pumps of #2 multi-purpose lithium base grease.

Important: Excessive grease pressure may damage the seals.

7. Return the mower to its operating position.
8. Close the fuel valve and fill the fuel tank with gasoline.
9. Connect the wire to the spark plug.

Lubricating the Gear Case

Service Interval: Every 50 hours

After every 50 operating hours, grease the gear case.

1. Remove the grass bag.
2. Remove the gear case access cover.
3. Install a grease gun onto the fitting through the gear case access opening (Figure 20).

Figure 20

1. Gear case access opening
2. Gear case access cover

4. Gently apply one to 2 pumps of #2 multi-purpose lithium-base grease.
5. Install the grass bag.

Engine Maintenance

Servicing the Air Filter

Service Interval: Every 100 hours

Every 300 hours

Clean the foam pre-cleaner every 25 operating hours. Clean the paper air filter every 100 operating hours. Replace the paper air filter once every season or every 300 operating hours; replace it more frequently in dusty conditions.

Important: Do not operate the engine without the air filter assembly; extreme engine damage will occur.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug (Figure 10).
3. Remove the screw that secures the air cleaner cover (Figure 21).

Figure 21

- | | |
|------------------------|----------|
| 1. Air cleaner housing | 4. Cover |
| 2. Foam pre-cleaner | 5. Screw |
| 3. Paper air filter | |

4. Remove the cover and clean it thoroughly (Figure 21).
5. Remove the paper air filter and discard it (Figure 21).

Important: Do not try to clean a paper filter.

6. Remove the foam pre-cleaner and wash it with a mild detergent and water, then blot it dry.
7. Saturate the pre-cleaner with oil, then squeeze it (do not twist) to remove the excess oil.
8. Install the foam pre-cleaner.
9. Install the new paper air filter.

10. Install the cover and secure it with the screw.

11. Connect the wire to the spark plug.

Changing the Engine Oil

Service Interval: After the first 5 hours

Every 50 hours

Change the oil after the first 5 operating hours and then after every 50 operating hours or every season (more frequently in dusty or dirty conditions).

1. Run the engine to warm the engine oil.

Note: Warm oil flows better and carries more contaminants.

Oil may be hot after engine has been run, and contact with hot oil can cause severe personal injury.

Avoid contacting the hot engine oil when you drain it.

2. Stop the engine and wait for all moving parts to stop.
3. Disconnect the wire from the spark plug (Figure 10).
4. Place a suitable drain pan under the **right** side of the mower under the oil drain.
5. Drain the gasoline from the fuel tank; refer to Emptying the Fuel Tank and Cleaning the Fuel Filter.
6. Tip the mower onto its **right** side.
7. Open the oil drain valve (Figure 22) and drain the oil.
8. Return the mower to its operating position.
9. Insert the dipstick into the filler neck and rotate the cap clockwise until it is tight.
10. Fill the crankcase to the Full line on the dipstick with fresh oil. Refer to the Filling the Crankcase with Oil.
11. Wipe up any spilled oil.
12. Close the fuel valve and fill the fuel tank with gasoline.
13. Connect the wire to the spark plug.
14. Recycle the used oil according to local codes.

Changing the Oil Filter

Service Interval: Every 100 hours

Replace the oil filter (Figure 22) after every 100 operating hours or yearly, whichever comes first.

Figure 22

1. Oil filter
2. Fuel line
3. Oil drain valve

1. Run the engine to warm the oil.

Oil may be hot after the engine has been run, and contact with hot oil can cause severe personal injury.

Avoid contacting the hot engine oil when you drain it.

2. Stop the engine and wait for all moving parts to stop.
3. Disconnect the wire from the spark plug.
4. Drain the engine oil; refer to Changing the Engine Oil.
5. Place a rag under the oil filter to catch any oil that may leak out as you remove the filter.
6. Remove the oil filter.
7. Use your finger to coat the gasket on the new filter with oil (Figure 23).

Figure 23

1. Gasket

8. Install the new filter and hand tighten it 2/3 turn only.

9. Fill the crankcase to the Full line on the dipstick with fresh oil Refer to Filling the Crankcase with Oil.
10. Connect the wire to the spark plug.
11. Run the engine for about 3 minutes.
12. Stop the engine, wait for all moving parts to stop, and check for oil leakage around the filter.
13. Add oil to compensate for the oil in the oil filter. Refer to Checking the Engine Oil Level.
14. Recycle the used oil filter according to local codes.

Servicing the Spark Plug

Service Interval: Every 100 hours

Check the spark plug after every 100 operating hours. Use an **NGK BPR5ES** spark plug or equivalent.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug (Figure 10).
3. Clean around the spark plug.
4. Remove the spark plug from the cylinder head.

Important: Replace a cracked, fouled, or dirty spark plug. Do not clean the electrodes because grit entering the cylinder can damage the engine.

5. Set the gap on the plug to 0.030 in. (0.76 mm) (Figure 24).

Figure 24

1. Center electrode insulator
2. Side electrode
3. Air gap (not to scale)

6. Install the spark plug and the gasket seal.
7. Torque the plug to 17 ft-lb (23 N·m).
8. Connect the wire to the spark plug.

Fuel System Maintenance

Emptying the Fuel Tank and Cleaning the Fuel Filter

Service Interval: Yearly

Every 50 hours

Every 300 hours

The fuel filter (screen) element is located inside the fuel tank. Clean the fuel filter element every 100 operating hours or yearly.

1. Stop the engine and wait for it to cool down.

Note: Drain gasoline from a cold engine only.

2. Disconnect the wire from the spark plug.
3. Close the fuel valve (Figure 11).
4. Disconnect the fuel line by loosening the tube clamp at the carburetor.
5. Open the fuel valve.
6. Drain the gasoline completely from the tank and fuel line into an approved fuel container.
7. Remove the fuel tank from the mower.
8. Close the fuel valve.
9. Pour a small amount of fuel in the fuel tank, move the fuel around in the tank, and pour it out into an approved fuel container.
10. Install the fuel tank and fuel line.
11. Connect the wire to the spark plug.

Drive System Maintenance

Adjusting the Self-propel Drive

Service Interval: Every 75 hours

If the mower does not self-propel or has a tendency to creep forward when the traction control bar is more than 1-1/2 inches (38 mm) from the handle, adjust the self-propel drive.

1. If the mower does not self-propel, rotate the transmission cable nuts clockwise 1/2 turn to tighten the belt (Figure 25).

Figure 25

1. Transmission cable nuts

2. If the mower creeps forward, rotate the transmission cable nuts 1/2 turn counterclockwise to loosen the belt (Figure 25).
3. If the mower does not drive up slopes, you may need to increase the belt tension by rotating the transmission cable nuts clockwise.

Controls System Maintenance

Adjusting the Blade Brake Cable

Service Interval: Before each use or daily

Every 100 hours

Whenever you install a new blade brake cable assembly or replace the belt, adjust the blade brake cable.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug (Figure 10).
3. Remove the belt cover.
4. Loosen the blade brake cable nuts until the brake cable conduit slides (Figure 26).

Figure 26

1. Blade brake cable nuts
2. Brake cable conduit

5. Pull the cable to remove the slack, but do not put tension on the spring.
6. Tighten the blade brake cable nut to lock the adjustment in place.
7. Check the adjustment by activating the blade brake clutch.

Note: The extended spring should measure between 1-3/4 and 2 inches. (44 and 51 mm)

8. Install the belt cover.
9. Connect the wire to the spark plug.

Blade Maintenance

Maintaining the Cutting Blade

Always mow with a sharp blade. A sharp blade cuts cleanly and without tearing or shredding the grass blades.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug (Figure 10).
3. Drain the gasoline from the fuel tank; refer to Emptying the Fuel Tank and Cleaning the Fuel Filter.
4. Tip the mower onto its **right** side (Figure 27).

Figure 27

1. Blade bolt
2. Washer
3. Anti-scalp cup
4. Blade

Inspecting the Blade

Service Interval: Before each use or daily

Before each use or daily

Every 50 hours

Carefully examine the blade for sharpness and wear, especially where the flat and the curved parts meet (Figure 28A). Because sand and abrasive material can wear away the metal that connects the flat and curved parts of the blade, check the blade before using the mower. If you notice a slot or wear (Figure 28B and Figure 28C), replace the blade; refer to Removing the Blade.

Figure 28

- | | |
|---------------------------|----------------|
| 1. Sail | 3. Wear |
| 2. Flat part of the blade | 4. Slot formed |

Note: For the best performance, install a new blade before the cutting season begins. During the year, file down any small nicks to maintain the cutting edge.

A worn or damaged blade can break, and a piece of the blade could be thrown into the operator's or bystander's area, resulting in serious personal injury or death.

- Inspect the blade periodically for wear or damage.
- Replace a worn or damaged blade.

Removing the Blade

Grasp the end of the blade using a rag or a thickly padded glove. Remove the blade bolt, washer, anti-scalp cup, and blade (Figure 27).

Sharpening the Blade

File the top side of the blade to maintain its original cutting angle (Figure 29A) and inner cutting edge radius (Figure 29B). The blade will remain balanced if you remove the same amount of material from both cutting edges.

Figure 29

- | | |
|--------------------------------|---------------------------------------|
| 1. Sharpen at this angle only. | 2. Maintain the original radius here. |
|--------------------------------|---------------------------------------|

Balancing the Blade

1. Check the balance of the blade by placing the center hole of the blade over a nail or screwdriver shank clamped horizontally in a vise (Figure 30).

Figure 30

Note: You can also check the balance using a commercially manufactured blade balancer.

2. If either end of the blade rotates downward, file that end (not the cutting edge or the end near the cutting edge). The blade is properly balanced when neither end drops.

Installing the Blade

1. Install a sharp, balanced Toro blade, the washer, anti-scalp cup, and blade nuts. The sail of the blade must point toward the top of the mower housing for proper installation. Torque the blade bolt to 75 to 85 ft-lb (102 to 115 N·m).
2. Return the mower to its operating position.
3. Close the fuel valve and fill the fuel tank with gasoline.
4. Connect the wire to the spark plug.

Cleaning

Cleaning under the Belt Cover

Service Interval: Every 50 hours

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug (Figure 10).
3. Remove the screw that secures the belt cover to the mower housing (Figure 31).

Figure 31

1. Screw

4. Push down on the belt cover on each side of the engine and lift the cover off the mower.
5. Brush out the debris around the belt area.
6. Install the belt cover.
7. Connect the wire to the spark plug.

Cleaning under the Mower Housing

To ensure the best performance, keep the underside of the mower housing clean.

Washing Method

Service Interval: Before each use or daily

1. Position the mower on a flat concrete or asphalt surface near a garden hose.
2. Start the engine.
3. Hold the running garden hose at handle level and direct the water to flow on the ground just in front of the right rear wheel (Figure 32).

Figure 32

1. Right rear wheel

Note: The blade will draw in water and wash out clippings. Let the water run until you no longer see clippings being washed out from under the housing.

4. Disengage the blade, stop the engine and wait for all moving parts to stop.
5. Turn off the water.
6. Start the mower and let it run for a few minutes to dry out the moisture on the mower and its components.

Scraping Method

If washing does not remove all debris from under the mower, scrape it clean.

1. Disconnect the wire from the spark plug (Figure 10).
2. Drain the fuel from the fuel tank. Refer to Emptying the Fuel Tank and Cleaning the Fuel Filter.

Tipping the mower may cause the fuel to leak from the carburetor or the fuel tank. Gasoline is extremely flammable, highly explosive, and, under certain conditions, can cause personal injury or property damage.

Avoid fuel spills by running the engine dry or by removing the gasoline with a hand pump; never siphon.

3. Tip the mower onto its **right** side.
4. Remove the dirt and grass clippings with a hardwood scraper. Avoid burrs and sharp edges.
5. Return the mower to its operating position.
6. Fill the fuel tank with gasoline.
7. Connect the wire to the spark plug.

Cleaning the Discharge Tunnel

Service Interval: Before each use or daily

Clean the discharge tunnel after each use.

Ensure that the discharge tunnel door closes securely when you remove the bag. If the debris prevents the discharge door from closing securely, clean the inside of the discharge tunnel and the door thoroughly.

Storage

To prepare the mower for off-season storage, perform the recommended maintenance procedures. Refer to Maintenance.

Store the mower in a cool, clean, dry place. Cover the mower to keep it clean and protected.

Preparing the Fuel System

Gasoline can vaporize if you store it over long periods of time and explode if it comes into contact with an open flame.

- **Do not store gasoline over long periods of time.**
- **Do not store the mower with gasoline in the fuel tank or the carburetor in an enclosure with an open flame. (For example, a furnace or a water heater pilot light.)**
- **Allow the engine to cool before storing it in any enclosure.**

Empty the fuel tank when mowing the last time before storing the mower.

1. Run the mower until the engine stops from running out of fuel.
2. Prime the engine and start it again.
3. Allow the engine to run until it stops. When you can no longer start the engine, it is sufficiently dry.

Preparing the Engine

1. While the engine is still warm, change the oil from the crankcase. Refer to Changing the Engine Oil.
2. Remove the spark plug.
3. Using an oil can, add about one tablespoon of oil to the crankcase through the spark plug hole.
4. Slowly rotate the engine several times, using the starter rope, to distribute the oil.
5. Install the spark plug but do not connect the wire to the spark plug.

General Information

1. Clean the mower housing. Refer to Cleaning under the Mower Housing.
2. Clean any dirt and chaff from the cylinder, cylinder head fins, and blower housing.

3. Remove grass clippings, dirt, and grime from the external parts of the engine, the shrouding, and the top of the mower housing.
4. Clean under the cover Refer to Cleaning under the Cover.
5. Check the condition of the blade. Refer to Maintaining the Cutting Blade.
6. Service the air filter; refer to Servicing the Air Filter.
7. Lubricate the pivot arms; refer to Lubricating the Pivot Arms.
8. Tighten all nuts, bolts, and screws.
9. Touch up all rusted or chipped paint surfaces with paint available from an Authorized Service Dealer.

Removing the Mower from Storage

1. Check and tighten all fasteners.
2. Remove the spark plug and spin the engine rapidly using the starter to blow excess oil from the cylinder.
3. Clean the spark plug or replace it if it is cracked, broken, or if the electrodes are worn.
4. Install the spark plug and torque it to 17 ft-lb (23 N•m).
5. Perform any needed maintenance procedures; refer to Maintenance.
6. Fill the fuel in the fuel tank with fresh gasoline.
7. Check the engine oil level.
8. Connect the wire to the spark plug.

Troubleshooting

Problem	Possible Cause	Corrective Action
The engine does not start	1. The fuel tank is empty or the fuel system contains stale fuel. 2. The throttle lever is not in the Choke position. 3. The wire is not connected to the spark plug. 4. The spark plug is pitted, fouled, or the gap is incorrect.	1. Drain and/or fill the fuel tank with fresh gasoline. If the problem persists, contact an Authorized Service Dealer. 2. Move the throttle lever to the Choke position. 3. Connect the wire to the spark plug. 4. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked.
The engine starts hard or loses power	1. The fuel tank contains stale fuel. 2. The fuel cap vent hole is plugged. 3. The air filter element is dirty and is restricting the air flow. 4. The underside of the mower housing contains clippings and debris. 5. The spark plug is pitted, fouled, or the gap is incorrect. 6. The engine oil level is low or the oil is dirty.	1. Drain and fill the fuel tank with fresh gasoline. 2. Clean the fuel cap vent hole or replace the fuel cap. 3. Clean the air filter pre-cleaner and/or replace the paper air filter. 4. Clean under the mower housing. 5. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked. 6. Check the engine oil. Change the oil if it is dirty or add oil if it is low
The engine runs rough	1. The wire is not connected to the spark plug. 2. The spark plug is pitted, fouled, or the gap is incorrect. 3. The throttle lever is not in the Fast position. 4. The air filter element is dirty and is restricting the air flow.	1. Connect the wire to the spark plug. 2. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked. 3. Move the throttle lever to the Fast position. 4. Clean the air filter pre-cleaner and/or replace the paper air filter.
The mower or engine vibrates excessively	1. The blade is bent or is out of balance. 2. The blade mounting nuts are loose. 3. The underside of the mower housing contains clippings and debris. 4. The engine mounting bolts are loose.	1. Balance the blade. If the blade is bent, replace it. 2. Tighten the blade mounting nuts. 3. Clean under the mower housing. 4. Tighten the engine mounting bolts.
There is an uneven cutting pattern	1. All 4 wheels are not at the same height. 2. The blade is dull. 3. You are mowing in the same pattern repeatedly. 4. The underside of the mower housing contains clippings and debris.	1. Place all 4 wheels at the same height. 2. Sharpen and balance the blade. 3. Change the mowing pattern. 4. Clean under the mower housing.
The mower does not self-propel	1. The self-propel drive cable is out of adjustment or is damaged. 2. There is debris under the belt cover.	1. Adjust the self-propel drive cable. Replace the cable if necessary. 2. Clean the debris from under the belt cover.

The Toro Warranty

Conditions and Products Covered

The Toro® Company and its affiliate, Toro Warranty Company, pursuant to an agreement between them, jointly promises to the original purchaser* to repair any Toro Product used for normal residential purposes* if defective in materials or workmanship. The following time periods apply from the date of original purchase:

Products

Walk Power Mowers
Rear Engine Riders
Lawn & Garden Tractors
Electric Hand Held Products
Snowthrowers
Consumer Zero Turn

Warranty Period

2-year limited warranty
2-year limited warranty
2-year limited warranty
2-year limited warranty
2-year limited warranty

* "Original purchaser" means use the person who originally purchased Toro products.

* "Normal residential purposes" means use of the product on the same lot as your home. Use at more than one location is considered commercial use, and the commercial use warranty would apply.

Limited Warranty for Commercial Use

Toro Consumer Products and attachments used for commercial, institutional, or rental use are warranted against defects in materials or workmanship for the following time periods from the date of original purchase:

Products

Walk Power Mowers
Rear Engine Riders
Lawn & Garden Tractors
Electric Hand Held Products
Snowthrowers
Consumer Zero Turn

Warranty Period

90 day warranty
90 day warranty
90 day warranty
90 day warranty
90 day warranty
45 day warranty

Instructions for Obtaining Warranty Service

If you think that your Toro Product contains a defect in materials or workmanship, follow this procedure:

1. Contact your seller to arrange service of the product. If for any reason it is impossible for you to contact your seller, you may contact any Toro Authorized Distributor to arrange service.
2. Bring the product and your proof of purchase (sales receipt) to your seller or the Service Dealer.

If for any reason you are dissatisfied with the Service Dealer's analysis or with the assistance provided, contact the Toro importer or contact us at:

Customer Care Department, Consumer Division
Toro Warranty Company
8111 Lyndale Avenue South
Bloomington, MN 55420-1196
Manager: Technical Product Support: 001-952-887-8248

See attached Distributor List

Owner Responsibilities

You must maintain your Toro Product by following the maintenance procedures described in the operator's manual. Such routine maintenance, whether performed by a dealer or by you, is at your expense.

Items and Conditions Not Covered

This express warranty does not cover:

- Cost of regular maintenance service or parts, such as filters, fuel, lubricants, tune-up parts, blade sharpening, brake and clutch adjustments.
- Any product or part which has been altered or misused or required replacement or repair due to normal wear, accidents, or lack of proper maintenance.
- Repairs necessary due to improper fuel, contaminants in the fuel system, or failure to properly prepare the fuel system prior to any period of non-use over three months.
- Engine and transmission. These are covered by the appropriate manufacturer's guarantees with separate terms and conditions.

All repairs covered by this warranty must be performed by an Authorized Toro Service Dealer using Toro approved replacement parts.

General Conditions

The purchaser is covered by the national laws of each country. The rights to which the purchaser is entitled with the support of these laws are not restricted by this warranty.
