CARBURETOR ADJUSTMENTS

Power and idle screw adjustments are set at the factory for best performance. If it should become necessary to adjust the carburetor, proceed as follows:

HIGH SPEED ADJUSTMENTS

1. Initial adjustment, turn high speed adjusting screw "A" clockwise until finger tight.

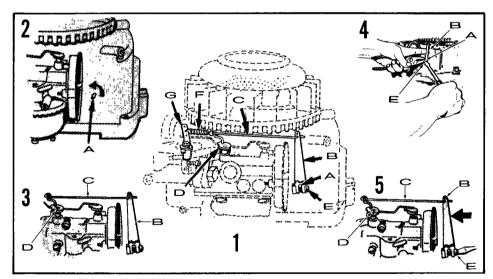

- 2. Carefully turn high-speed adjusting screw "A" in a counter-clockwise direction 1 turn.
- 3. After engine has warmed up, make final adjustments by turning adjusting screw an eighth of a turn at a time, allowing an interval between adjustments for the engine to react.
- 4. If engine speed is not high enough, adjust high speed by turning screw "D" under carburetor control cover. After increasing speed, make final high speed carburetor adjustments with high speed adjusting screw "A". Allow setting to be slightly rich to compensate for load.

IDLE ADJUSTMENTS

Set throttle control lever in idle position.

- 1. Turn idle adjusting screw "B" clockwise until finger tight.
- 2. Turn counter-clockwise 1 turn to open. After engine is started, make final adjustments by turning screw an eighth of a turn at a time, allowing time between turns for engine to react.
- 3. Idle speed can be adjusted by turning screw "C". After making speed adjustment, make final idle adjustment by turning screw "B".

MECHANICAL GOVERNOR ADJUSTMENTS

Governors are pre-set at the factory. If the governor lever "B" has been removed from the governor shaft "A", proceed as follows:

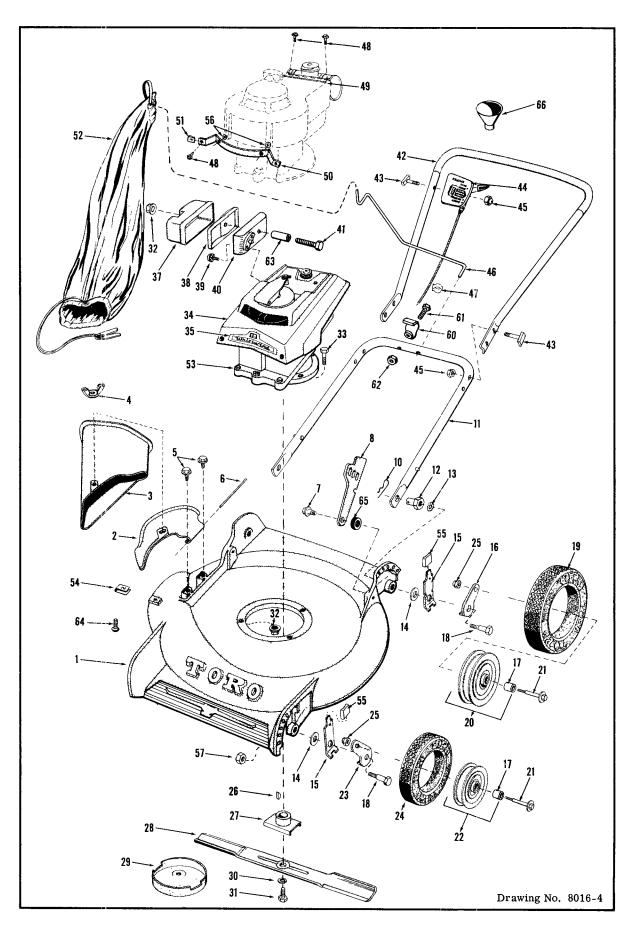

- 1. Remove engine shroud (Ref. No. 34, page 4), blower housing (Ref. No. 98, page 8), speed control cover (Ref. No. 94, page 8) and air cleaner element.
- 2. Carefully turn the governor shaft "A" counter-clockwise until it stops.
- 3. Attach link "C" to governor lever "B" and carburetor throttle lever "D" and install governor lever on governor shaft "A".
- 4. With a pair of pliers, hold governor shaft "A" in position and push governor lever "B" to the right until

carburetor throttle lever 'D" stops the motion. Turn screw "E" until governor lever is snug on governor shaft.

- 5. With finger, carefully push governor lever "B" counter-clockwise until carburetor throttle lever "D" in figure 1 stops in wide open position. Tighten governor lever screw "E".
- 6. Attach spring "F" to loop in link "C" and the middle hole in R. P. M. adjusting lever "G" as shown in drawing 1.

Engine speed adjustments are made by turning screw "D" in photo above.
