Form No. 3375-458 Rev A

Super Recycler® Lawn Mower

Model No. 20383—Serial No. 313000001 and Up

Operator's Manual

Introduction

Read this information carefully to learn how to operate and maintain your product properly and to avoid injury and product damage. You are responsible for operating the product properly and safely.

You may contact Toro directly at www.Toro.com for product and accessory information, help finding a dealer, or to register your product.

Whenever you need service, genuine Toro parts, or additional information, contact an Authorized Service Dealer or Toro Customer Service and have the model and serial numbers of your product ready. Figure 1 identifies the location of the model and serial numbers on the product.

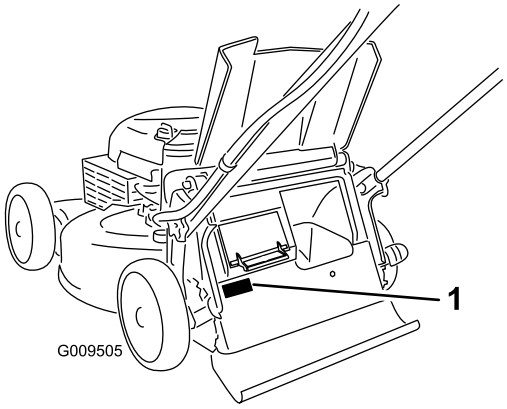

Figure 1

1. Model and serial number plate

Write the product model and serial numbers in the space below:

Model No. _____

Serial No. _____

This manual identifies potential hazards and has safety messages identified by the safety alert symbol (Figure 2), which signals a hazard that may cause serious injury or death if you do not follow the recommended precautions.

Figure 2

1. Safety alert symbol

This manual uses 2 words to highlight information. **Important** calls attention to special mechanical information and **Note** emphasizes general information worthy of special attention.

⚠ WARNING

CALIFORNIA
Proposition 65 Warning

This product contains a chemical or chemicals known to the State of California to cause cancer, birth defects, or reproductive harm.

The engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

Important: This engine is not equipped with a spark arrester muffler. It is a violation of California Public Resource Code Section 4442 to use or operate the engine on any forest-covered, brush-covered, or grass-covered land. Other states or federal areas may have similar laws.

This spark ignition system complies with Canadian ICES-002.

For models with stated engine horsepower, the gross horsepower of the engine was laboratory rated by the engine manufacturer in accordance with SAE J1940. As configured to meet safety, emission, and operating requirements, the actual engine horsepower on this class of lawn mower will be significantly lower.

Safety

This lawn mower meets or exceeds the CPSC blade safety requirements for walk-behind rotary lawn mowers and the B71.1 specifications of the American National Standards Institute in effect at the time of production.

Read and understand the contents of this manual before you start the engine.

The safety alert symbol (Figure 2) is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death. Improperly using or maintaining this mower could result in injury or death. To reduce this potential, comply with the following safety instructions.

The following instructions have been adapted from the ANSI/OPEI standard B71.1-2003.

This cutting machine can amputate hands and feet and throw objects. Failure to observe the following safety instructions could result in serious injury or death.

General Operation

- Read, understand, and follow all instructions on the machine and in the manual(s) before starting.
- Do not put hands or feet near or under the machine. Keep clear of the discharge opening at all times.
- Only allow responsible adults, who are familiar with the instructions, to operate this machine.
- Clear the area of objects such as rocks, wire, toys, etc., which could be thrown by the blade. Stay behind the handle when the engine is running.
- Be sure the area is clear of bystanders before operating. Stop machine if anyone enters the area.
- Do not operate machine barefooted or while wearing sandals. Always wear substantial footwear.
- Do not pull machine backward unless absolutely necessary. Always look down and behind before and while moving backward.
- Never direct discharged material toward anyone. Avoid discharging material against a wall or obstruction. Material may ricochet back toward the operator. Stop the blade when crossing gravel surfaces.
- Do not operate machine without the entire grass catcher, discharge guard, rear guard, or other safety protective devices in place and working.
- Never leave a running machine unattended.
- Stop the engine and wait until the blade comes to a complete stop before cleaning the machine, removing grass catcher, or unclogging the discharge guard.
- Operate machine only in daylight or good artificial light.
- Do not operate machine while under the influence of alcohol or drugs.
- Never operate mower in wet grass. Always be sure of your footing; walk; never run.
- Disengage the drive system, if so equipped, before starting the engine.
- If the machine should start to vibrate abnormally, stop the engine and check for the cause immediately. Vibration is generally a warning of trouble.
- Always wear eye protection when operating machine.
- See manufacturer's instructions for proper operation and installation of accessories. Only use accessories approved by the manufacturer.

Slope Operation

Slopes are a major factor related to slip and fall accidents, which can result in severe injury. Operation on all slopes require extra caution. If you feel uneasy on a slope, do not mow it.

- Mow across the face of slopes; never up and down. Exercise extreme caution when changing direction on slopes.

- Watch for holes, ruts, bumps, rocks, or other hidden objects. Uneven terrain could cause a slip and fall accident. Tall grass can hide obstacles.
- Do not mow on wet grass or excessively steep slopes. Poor footing could cause a slip and fall accident.
- Do not mow near drop-offs, ditches, or embankments. You could lose your footing or balance.

Children

Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. **Never** assume that children will remain where you last saw them.

- Keep children out of the mowing area and under the watchful care of a responsible adult other than the operator.
- Be alert and turn mower off if a child enters the area.
- Never allow children to operate the machine.
- Use extra care when approaching blind corners, shrubs, trees, or other objects that may block your view of a child.

Service

Safe Handling of Gasoline

To avoid personal injury or property damage, use extreme care in handling gasoline. Gasoline is extremely flammable and the vapors are explosive.

- Extinguish all cigarettes, cigars, pipes, and other sources of ignition.
- Use only an approved gasoline container.
- Never remove gas cap or add fuel with the engine running. Allow engine to cool before refueling.
- Never refuel the machine indoors.
- Never store the machine or fuel container where there is an open flame, spark, or pilot light such as on a water heater or on other appliances.
- Never fill containers inside a vehicle or on a truck or trailer bed with a plastic liner. Always place containers on the ground away from your vehicle before filling.
- Remove gas-powered equipment from the truck or trailer and refuel it on the ground. If this is not possible, then refuel such equipment with a portable container, rather than from a gasoline dispenser nozzle.
- Keep the nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete. Do not use a nozzle lock-open device.
- If fuel is spilled on clothing, change clothing immediately.
- Never overfill fuel tank. Replace gas cap and tighten securely.

⚠ WARNING

Exhaust contains carbon monoxide, an odorless, deadly poison that can kill you.

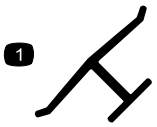

Do not run the engine indoors or in an enclosed area.

General Service

- Never operate machine in a closed area.
- Keep all nuts and bolts tight to be sure the equipment is in safe working condition.
- Never tamper with safety devices. Check their proper operation regularly.
- Keep machine free of grass, leaves, or other debris build-up. Clean up oil or fuel spillage and remove any fuel-soaked debris. Allow machine to cool before storing.
- If you strike a foreign object, stop and inspect the machine. Repair, if necessary, before starting.
- Never make any adjustments or repairs with the engine running. Disconnect the spark plug wire and ground against engine to prevent unintended starting.
- Check grass catcher components and the discharge guard frequently and replace with manufacturer's recommended parts, when necessary.
- Mower blades are sharp. Wrap the blade or wear gloves, and use extra caution when servicing them.
- Do not change the engine governor setting or overspeed the engine.
- Maintain or replace safety and instruction labels, as necessary.

Safety and Instructional Decals

Important: **Safety and instruction decals are located near areas of potential danger. Replace damaged decals.**

Manufacturer's Mark

1. Indicates the blade is identified as a part from the original machine manufacturer.

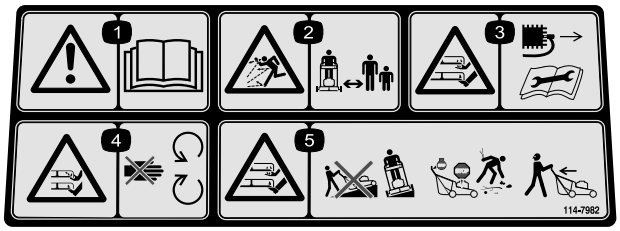

94-8072

112-8867

1. Lock
2. Unlock

114-7982

1. Warning—read the *Operator's Manual*.
2. Thrown object hazard—keep bystanders a safe distance from the machine.
3. Cutting/dismemberment hazard of hand or foot, mower blade—disconnect the spark plug wire and read the instructions before servicing or performing maintenance.
4. Cutting/dismemberment hazard of hand or foot, mower blade—stay away from moving parts.
5. Cutting/dismemberment hazard of hand or foot, mower blade—do not operate up and down slopes; operate side to side on slopes; stop the engine before leaving the operating position; and look behind you when backing up.

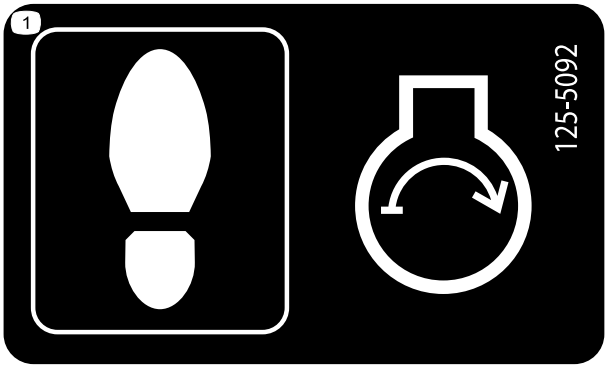

115-8411

1. Unlocked
2. Locked

117–2718

125–5092

1. Step on the deck to start the engine.

Setup

Important: **Remove and discard the protective plastic sheet that covers the engine.**

1

Installing the Blade-control Bar

No Parts Required

Procedure

Install the blade-control bar into the upper handle (Figure 3).

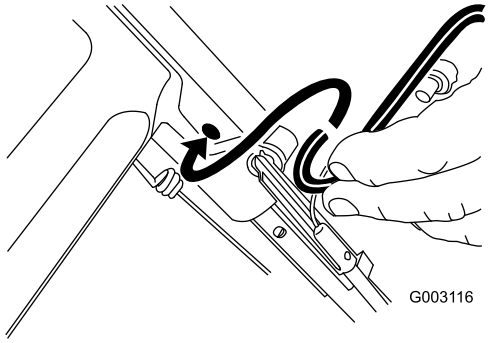

Figure 3

2

Assembling and Unfolding the Handle

No Parts Required

Procedure

⚠ WARNING

Assembling and unfolding the handle improperly can damage the cables, causing an unsafe operating condition.

- **Do not damage the cables when assembling and unfolding the handle.**
- **Ensure that the cables are routed to the outside of the handle.**
- **If a cable is damaged, contact an Authorized Service Dealer.**

1. Raise the rear of the machine housing to its highest cutting height setting by moving the 2 rear cutting height levers all the way forward. Refer to Adjusting the Cutting Height (page 9).
2. Attach the handle ends to the machine housing with 2 washers and 2 handle bolts (Figure 4), **but do not tighten the handle bolts.**

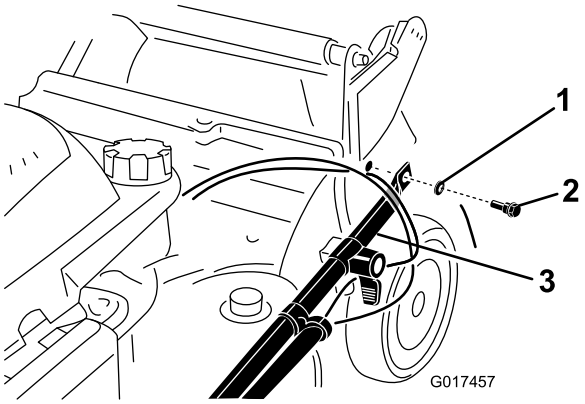

Figure 4

1. Washer
2. Handle bolt
3. Handle end

Important: **Route the cables to the *outside* of the handle (Figure 4).**

3. Rotate the handle rearward (Figure 5).

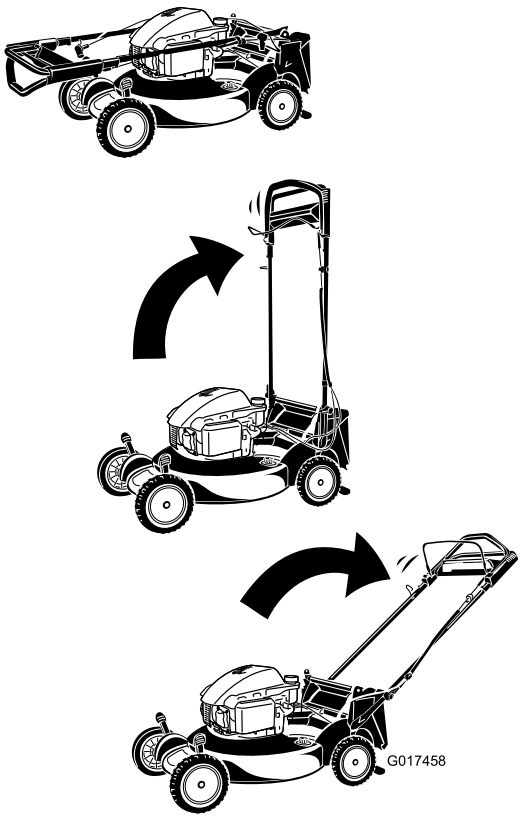

Figure 5

4. Lock the handle at your desired height. Refer to Adjusting the Handle Height (page 10).
5. Torque the handle bolts to 120 to 160 in-lb (14 to 17 N-m).
6. Adjust the cutting height. Refer to Adjusting the Cutting Height (page 9).

3

Installing the Recoil-starter Rope in the Rope Guide

No Parts Required

Procedure

Important: To start the engine safely and easily whenever you use the machine, install the recoil-starter rope in the rope guide.

Pull the recoil-starter rope through the rope guide on the handle (Figure 6).

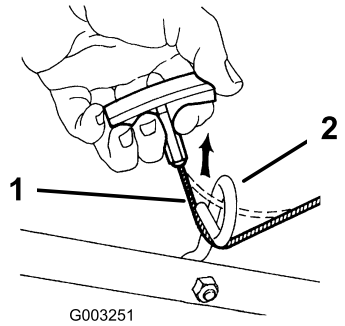

Figure 6

1. Recoil-starter rope
2. Rope guide

4

Filling the Engine with Oil

No Parts Required

Procedure

Important: Your machine does not come with oil in the engine. Before starting the engine, fill the engine with oil.

1. Move the machine to a level surface.
2. Remove the dipstick (Figure 7) and pour about 3/4 of the crankcase capacity of oil into the oil-fill tube.

   Note: Max. fill: 20 oz. (0.59 l), type: SAE 30 or SAE 10W-30 detergent oil with an API service classification of SF, SG, SH, SJ, SL, or higher.

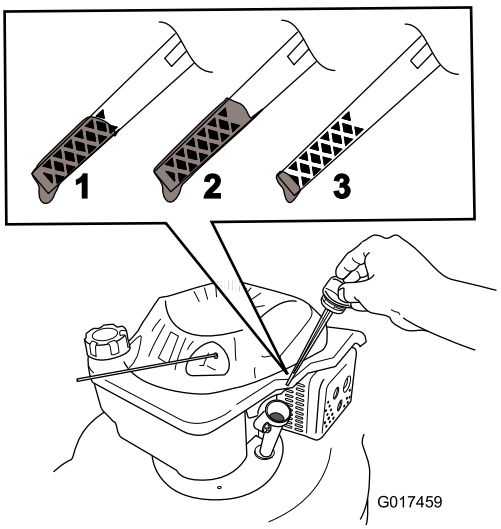

Figure 7

1. The oil level is at its maximum.
2. The oil level is too high—remove oil from the crankcase.
3. The oil level is too low—add oil to the crankcase.

3. Wipe off the dipstick end with a clean cloth.
4. Insert the dipstick into the oil-fill tube, but **do not** screw it in.
5. Remove the dipstick and read the oil level on the dipstick (Figure 7).
   - If the oil level is too low, add a small amount of oil slowly to the oil-fill tube, and then repeat steps 3 through 5 until the oil level on the dipstick is correct.
   - If the oil level is too high, drain the excess oil until the oil level on the dipstick is correct. To drain the excess oil, refer to Changing the Engine Oil (page 18).

     Important: If the oil level in the crankcase is too low or too high and you run the engine, you may damage the engine.
6. Install the dipstick securely.

Important: *Change the engine oil after the first 5 operating hours*; change it yearly thereafter. Refer to Changing the Engine Oil (page 18).

Product Overview

Operation

Filling the Fuel Tank

⚠ DANGER

Gasoline is extremely flammable and explosive. A fire or explosion from gasoline can burn you and others.

- **To prevent a static charge from igniting the gasoline, place the container and/or machine directly on the ground before filling, not in a vehicle or on an object.**
- **Fill the tank outdoors when the engine is cold. Wipe up spills.**
- **Do not handle gasoline when smoking or around an open flame or sparks.**
- **Store gasoline in an approved fuel container, out of the reach of children.**

Fill the fuel tank with fresh unleaded regular gasoline from a major name-brand service station (Figure 10).

Use unleaded regular gasoline suitable for automotive use (87 pump octane minimum). Leaded regular gasoline may be used if unleaded regular is not available.

Note: Never use methanol, gasoline containing methanol, or gasoline containing more than 10% ethanol because the fuel system could be damaged. Do not mix oil with gasoline.

Important: To reduce starting problems, add fuel stabilizer to the fuel all season, mixing it with gasoline less than 30 days old.

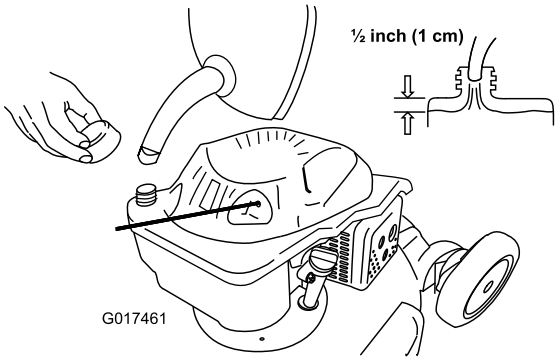

Figure 10

Checking the Engine Oil Level

Service Interval: Before each use or daily

Max. fill: 20 oz. (0.59 l), type: SAE 30 or SAE 10W-30 detergent oil with an API service classification of SF, SG, SH, SJ, SL, or higher.

1. Move the machine to a level surface.
2. Remove the dipstick (Figure 11).

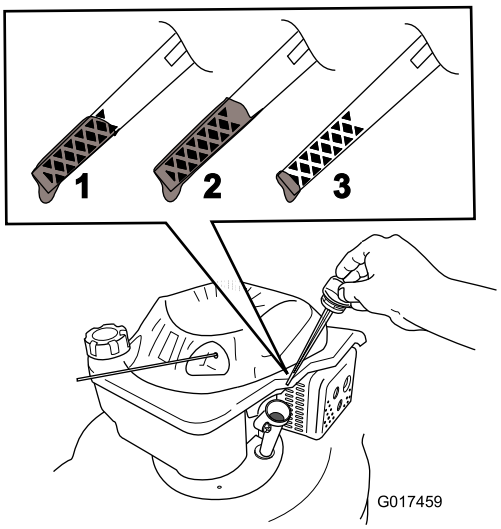

Figure 11

1. The oil level is at its maximum.
2. The oil level is too high—remove oil from the crankcase.
3. The oil level is too low—add oil to the crankcase.

3. Wipe off the dipstick end with a clean cloth.
4. Insert the dipstick into the oil-fill tube, but **do not** screw it in.
5. Remove the dipstick and read the oil level; refer to Figure 11.
   - If the oil level is too low, add a small amount of oil slowly to the oil-fill tube, and then repeat steps 3 through 5 until the oil level on the dipstick is correct.
   - If the oil level is too high, drain the excess oil until the oil level on the dipstick is correct. To drain the excess oil, refer to Changing the Engine Oil (page 18).

   Important: If the oil level in the crankcase is too low or too high and you run the engine, you may damage the engine.
6. Install the dipstick securely.

Adjusting the Cutting Height

⚠ WARNING

Adjusting the cutting height may bring you into contact with the moving blade, causing serious injury.

- **Stop the engine and wait for all moving parts to stop.**
- **Do not put your fingers under the housing when adjusting the cutting height.**

⚠ CAUTION

If the engine has been running, the muffler will be hot and can severely burn you. Keep away from the hot muffler.

Adjust the cutting height as desired. Set all four wheels to the same height.

Note: To raise the machine, move all 4 cutting height levers forward; to lower the machine, move them all rearward (Figure 12).

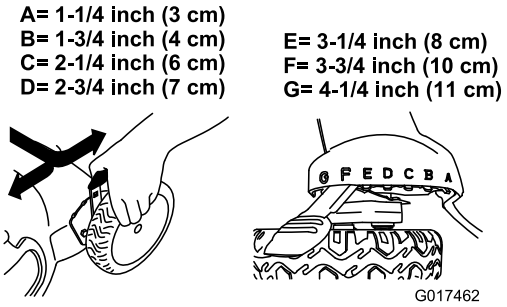

Figure 12

Adjusting the Handle Height

You may raise or lower the handle to a position comfortable for you.

Rotate the handle lock, move the handle to 1 of 3 positions, and lock the handle into position (Figure 13).

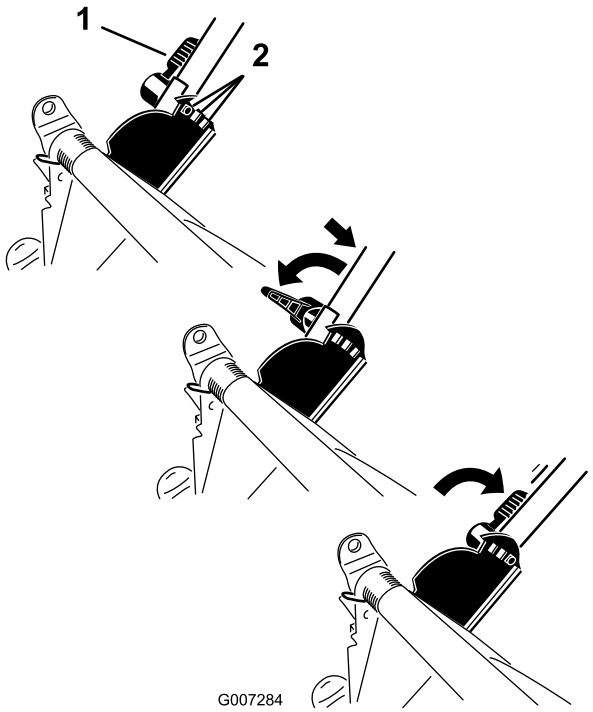

Figure 13

1. Handle lock
2. Handle positions

Starting the Engine

1. Pull the blade-control bar to the handle (Figure 14).

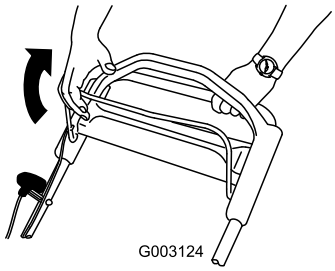

Figure 14

2. Pull the recoil start handle (Figure 15).

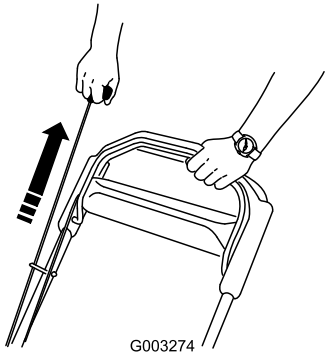

Figure 15

Note: If the machine does not start, contact an Authorized Service Dealer.

Using the Self-propel Drive

To operate the self-propel drive, simply walk with your hands on the upper handle and your elbows at your sides, and the machine will automatically keep pace with you (Figure 16).

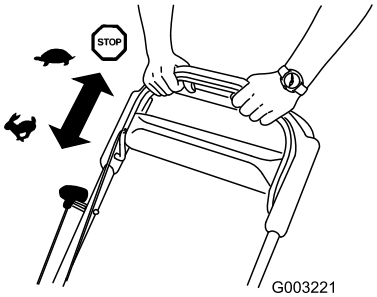

Figure 16

Stopping the Engine

Service Interval: Before each use or daily

If the ignition switch on your machine (Figure 17) is a toggle switch (with both an "I" and a "Stop"), push the switch to the Stop position. Otherwise, hold down the switch in the Stop position until the engine stops.

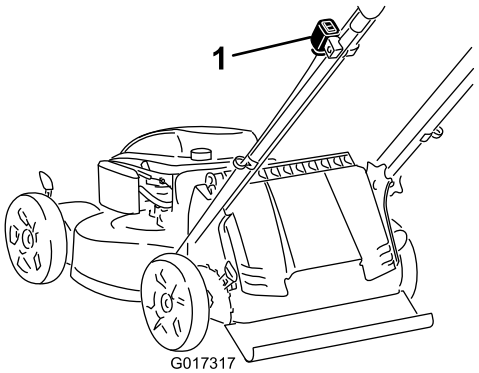

Figure 17

1. Ignition-toggle switch

Engaging the Blade

When you start your engine, the blade does not turn. You must engage the blade to mow.

1. Pull the control-bar lock back (Figure 18).

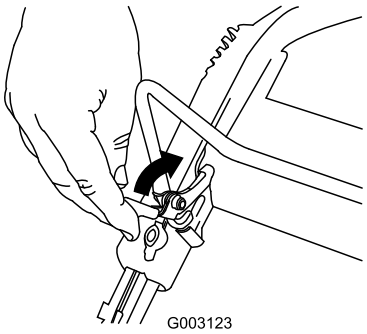

Figure 18

2. Pull the blade-control bar to the handle (Figure 19).

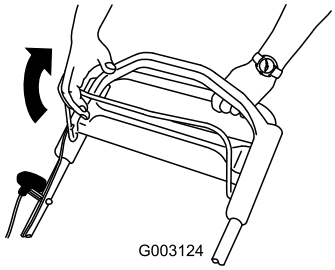

Figure 19

3. Hold the blade-control bar against the handle (Figure 20).

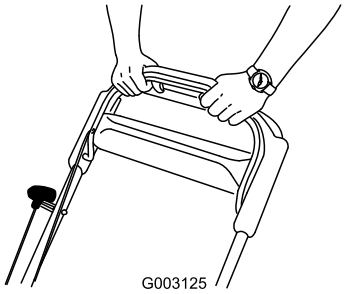

Figure 20

Disengaging the Blade

Release the blade-control bar (Figure 21).

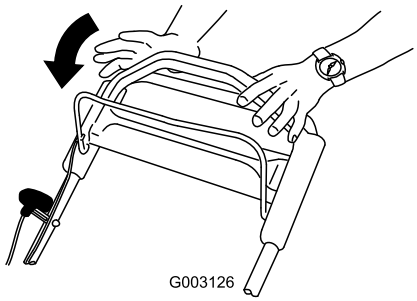

Figure 21

Important: When you release the blade-control bar, the blade should stop within 3 seconds. If it does not stop properly, stop using your machine immediately and contact an Authorized Service Dealer.

Checking the Blade-brake Clutch Operation

Check the control bar before each use to ensure that the blade-brake clutch system is operating properly.

Using the Grass Bag

Service Interval: Before each use or daily

You can use the grass bag to perform an additional test to check the blade-brake clutch.

1. Install the empty grass bag on the machine.
2. Start the engine.
3. Engage the blade.

   Note: The bag should begin to inflate, indicating that the blade is engaged and rotating.
4. Release the blade control bar.

   Note: If the bag does not immediately deflate, the blade is still rotating. The blade-brake clutch may be deteriorating and, if ignored, could result in an unsafe operating condition. Have the machine inspected and serviced by an Authorized Service Dealer.
5. Stop the engine and wait for all moving parts to stop.

Not Using the Grass Bag

1. Move the machine onto a paved surface in a non-windy area.
2. Set all 4 wheels to the 3-1/4 inch (83 mm) cut setting.
3. Take a half sheet of newspaper and crumple it into a ball small enough to go under the machine housing (about 3 inches or 76 mm in diameter).
4. Place the newspaper ball about 5 inches (13 cm) in front of the machine.

5. Start the engine.
6. Engage the blade.
7. Release the blade control bar.
8. Immediately push the machine over the newspaper ball.
9. Stop the engine and wait for all moving parts to stop.
10. Go to the front of the machine and check the newspaper ball.

    Note: If the newspaper ball did not go under the machine, repeat steps 4 through 10.
11. If the newspaper is unravelled or shredded, the blade did not stop properly, which could result in an unsafe operating condition. Contact an Authorized Service Dealer.

Recycling the Clippings

Your machine comes from the factory ready to recycle the grass and leaf clippings back into the lawn.

If the grass bag is on the machine, remove it; refer to Removing the Grass Bag (page 13) before recycling the clippings. If the side-discharge chute is on the machine, remove it and lock the side-discharge door; refer to Removing the Side-discharge Chute (page 15) before recycling the clippings.

Important: Ensure that the rear-discharge plug is locked in place. To lock the plug: Raise the discharge deflector (Figure 22), firmly push the plug in until it snaps into place behind the tabs, and rotate the lever on the plug to the left (Figure 23).

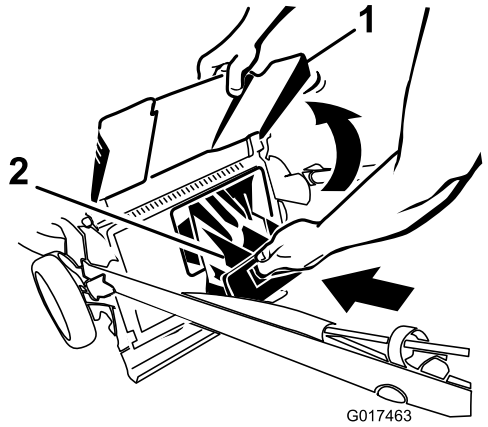

Figure 22

1. Discharge deflector
2. Rear-discharge plug

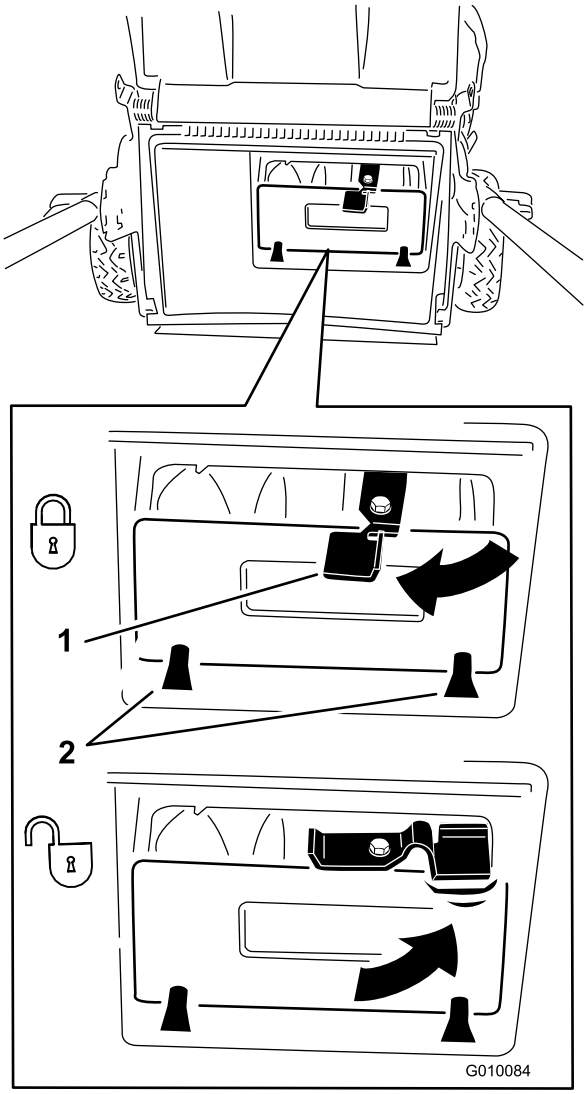

Figure 23

1. Lever
2. Tabs

Note: To unlock the plug, rotate the lever on the plug to the right (Figure 23).

Bagging the Clippings

Use the grass bag when you want to collect grass and leaf clippings from the lawn.

Note: Ensure the bag is seated in the correct position.

⚠ WARNING

A worn grass bag could allow debris to be thrown and result in serious personal injury or death to the operator or bystanders.

Check the grass bag frequently. If it is damaged, install a new Toro replacement bag.

If the side-discharge chute is on the machine, remove it and lock the side-discharge door; refer to Removing the Side-discharge Chute (page 15) before bagging the clippings.

⚠ WARNING

The blade is sharp; contacting the blade can result in serious personal injury.

Stop the engine and wait for all moving parts to stop before leaving the operating position.

Installing the Grass Bag

1. Route the starter rope around the lower-rope guide (Figure 24).

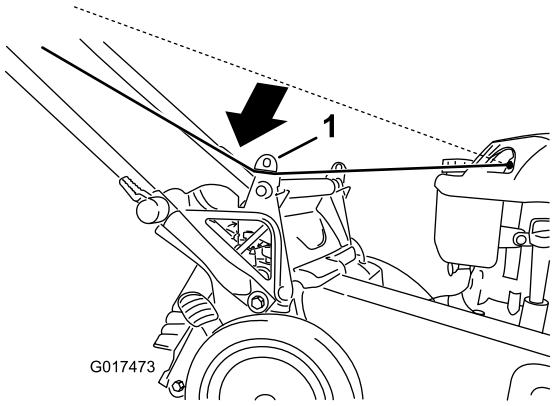

Figure 24

1. Lower-rope guide

Note: The lower-rope guide releases the starter rope when you pull the recoil start handle.

2. Raise and hold up the discharge deflector (Figure 25).

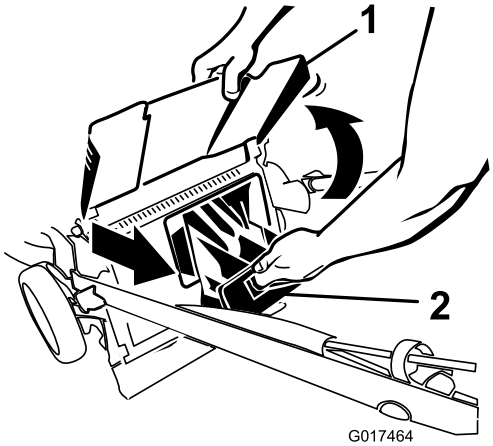

Figure 25

1. Discharge deflector
2. Rear-discharge plug

3. Pull out the rear-discharge plug (Figure 25).
4. Hang the upper front edge of the bag on the notches (Figure 26).

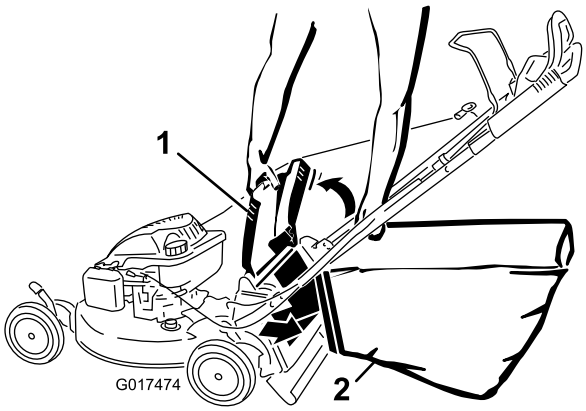

Figure 26

1. Discharge deflector
2. Grass bag

Note: Ensure that the grass bag is securely installed onto the machine.

5. Lower the discharge deflector.

Removing the Grass Bag

1. Route the starter rope around the lower-rope guide (Figure 27).

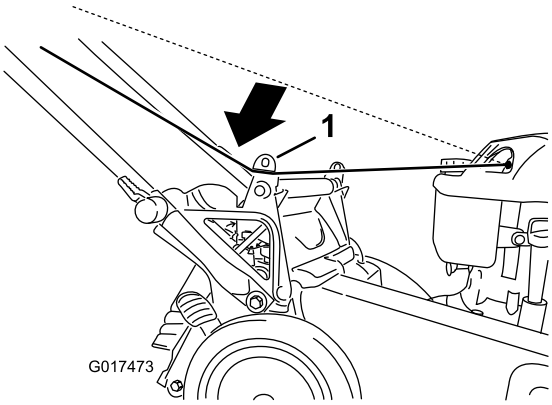

Figure 27

1. Lower rope guide

Note: The lower-rope guide releases the starter rope when you pull the recoil-start handle.

2. Raise and hold up the discharge deflector.
3. Lift the grass bag up by the handle off the notches.
4. Install the rear-discharge plug (Figure 28).

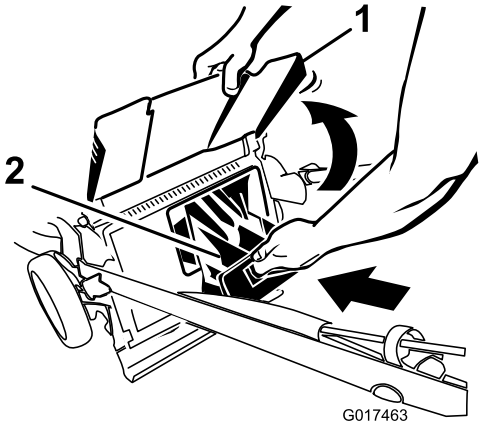

Figure 28

1. Discharge deflector
2. Rear-discharge plug

Important: **Ensure that the rear-discharge plug is locked in place. To lock the plug, firmly push the plug in until it snaps into place behind the tabs, and rotate the lever on the plug to the left (Figure 29).**

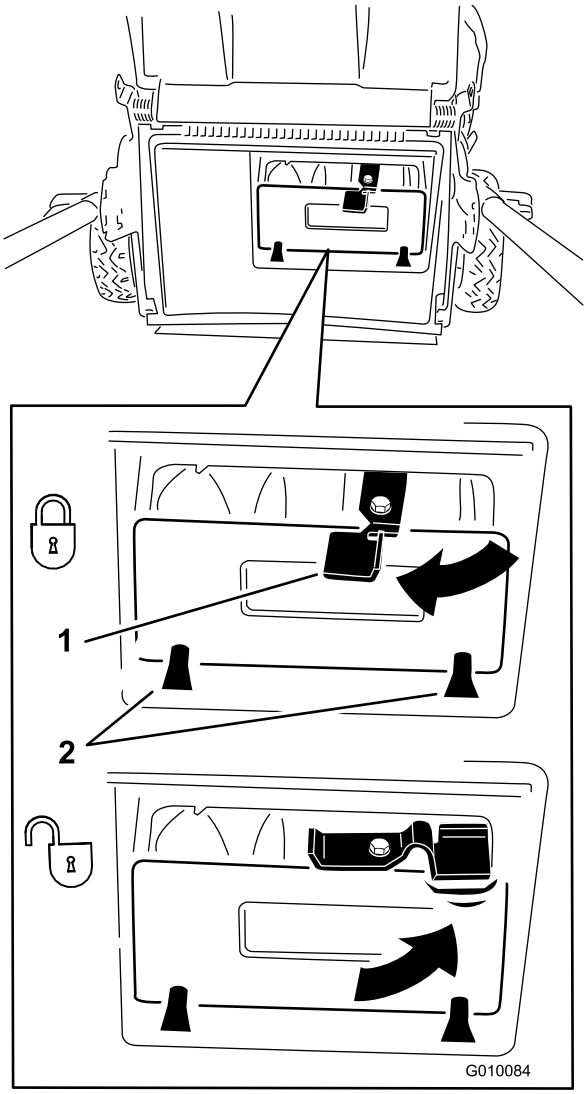

Figure 29

1. Lever
2. Tabs

Note: To unlock the plug, rotate the lever on the plug to the right (Figure 29).

5. Lower the discharge deflector.

Side-discharging the Clippings

Use the side-discharge for cutting very tall grass.

If the bag is on the machine, remove it and insert the rear-discharge plug; refer to Removing the Grass Bag (page 13) before side-discharging the clippings.

Important: Ensure that the rear-discharge plug is locked in place. To lock the plug: Raise the discharge deflector (Figure 30), firmly push the plug in until it snaps into place behind the tabs, and rotate the lever on the plug to the left (Figure 29).

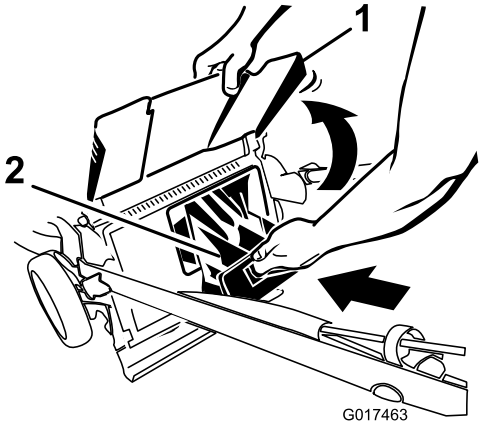

Figure 30

1. Discharge deflector
2. Rear-discharge plug

Note: To unlock the plug, rotate the lever on the plug to the right (Figure 29).

⚠ WARNING

The blade is sharp; contacting the blade can result in serious personal injury.

Stop the engine and wait for all moving parts to stop before leaving the operating position.

Installing the Side-discharge Chute

1. Unlock the side-discharge door (Figure 31).

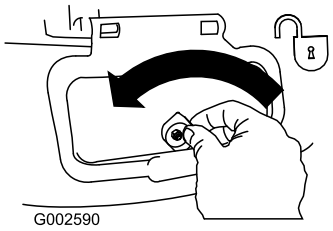

Figure 31

2. Lift open the side-discharge door (Figure 32).

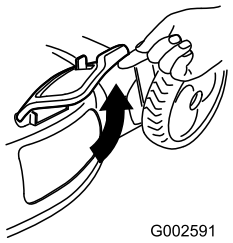

Figure 32

3. Install the side-discharge chute and close the door onto the chute (Figure 33).

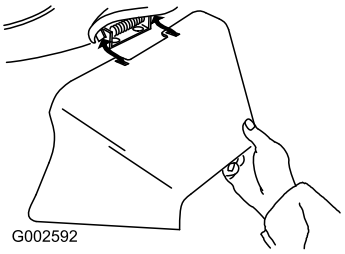

Figure 33

Removing the Side-discharge Chute

To remove the side-discharge chute, reverse the steps above.

Important: Lock the side-discharge door after you close it (Figure 34).

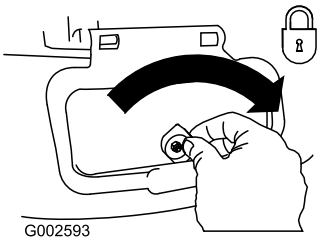

Figure 34

Operating Tips

General Mowing Tips

- Clear the area of sticks, stones, wire, branches, and other debris that the blade could hit.
- Avoid striking solid objects with the blade. Never deliberately mow over any object.
- If the machine strikes an object or starts to vibrate, immediately stop the engine, disconnect the wire from the spark plug, and examine the machine for damage.
- For best performance, install a new blade before the cutting season begins.
- Replace the blade when necessary with a Toro replacement blade.

Cutting Grass

- Cut only about a third of the grass blade at a time. Do not cut below the 2-inch (51 mm) setting unless the grass is sparse or it is late fall when grass growth begins to slow down. Refer to Adjusting the Cutting Height (page 9).
- When cutting grass over 6 inches (15 cm) tall, mow at the highest cutting height setting and walk slower; then mow again at a lower setting for the best lawn appearance. If the grass is too long, the machine may plug and cause the engine to stall.
- Mow only dry grass or leaves. Wet grass and leaves tend to clump on the yard and can cause the machine to plug or the engine to stall.

⚠ WARNING

Wet grass or leaves can cause serious injury if you slip and contact the blade. Mow only in dry conditions.

- Alternate the mowing direction. This helps disperse the clippings over the lawn for even fertilization.
- If the finished lawn appearance is unsatisfactory, try one or more of the following:
  - Replace the blade or have it sharpened.
  - Walk at a slower pace while mowing.
  - Raise the cutting height on your machine.
  - Cut the grass more frequently.
  - Overlap cutting swaths instead of cutting a full swath with each pass.
  - Set the cutting height on the front wheels one notch lower than the rear wheels. For example, set the front wheels at 2-1/4 inches (60 mm) and the rear wheels at 2-3/4 inches (70 mm).

Cutting Leaves

- After cutting the lawn, ensure that half of the lawn shows through the cut leaf cover. You may need to make more than one pass over the leaves.
- If there are more than 5 inches (13 cm) of leaves on the lawn, set the front cutting height 1 or 2 notches higher than the rear cutting height.
- Slow down your mowing speed if the machine does not cut the leaves finely enough.

Maintenance

Note: Determine the left and right sides of the machine from the normal operating position.

Recommended Maintenance Schedule(s)

Maintenance Service Interval	Maintenance Procedure
After the first 5 hours	• Change the engine oil.
Before each use or daily	• Check the engine oil level. • Ensure that the blade stops within 3 seconds after releasing the blade control bar. • Check the blade-brake clutch operation. • Clean grass clippings and dirt from under the machine.
Every 25 hours	• Lubricate the rear wheel gears. • Clean the blade-brake-clutch shield.
Before storage	• Empty the fuel tank before repairs as directed and before annual storage.
Yearly	• Replace the air filter; replace it more frequently in dusty operating conditions. • Change the engine oil. • Replace the blade or have it sharpened (more frequently if the edge dulls quickly).

Preparing for Maintenance

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the spark plug wire from the spark plug (Figure 35) before performing any maintenance procedure.

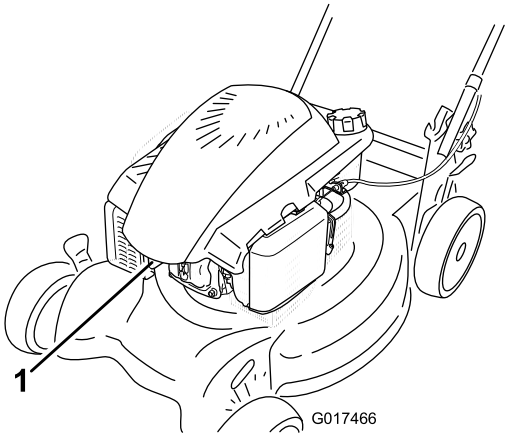

Figure 35

1. Spark-plug wire

3. After performing the maintenance procedure(s), connect the spark plug wire to the spark plug.

Important: Before tipping the machine to change the oil or replace the blade, allow the fuel tank to run dry through normal usage. If you must tip the machine prior to running out of fuel, use a hand fuel pump to remove the fuel. Always tip the machine onto its side with the dipstick down.

⚠ WARNING

Tipping the machine may cause the fuel to leak. Gasoline is flammable, explosive and can cause personal injury.

Run the engine dry or remove the gasoline with a hand pump; never siphon.

Replacing the Air Cleaner

Service Interval: Yearly

1. Press down on the latch tabs on top of the air cleaner cover (Figure 36).

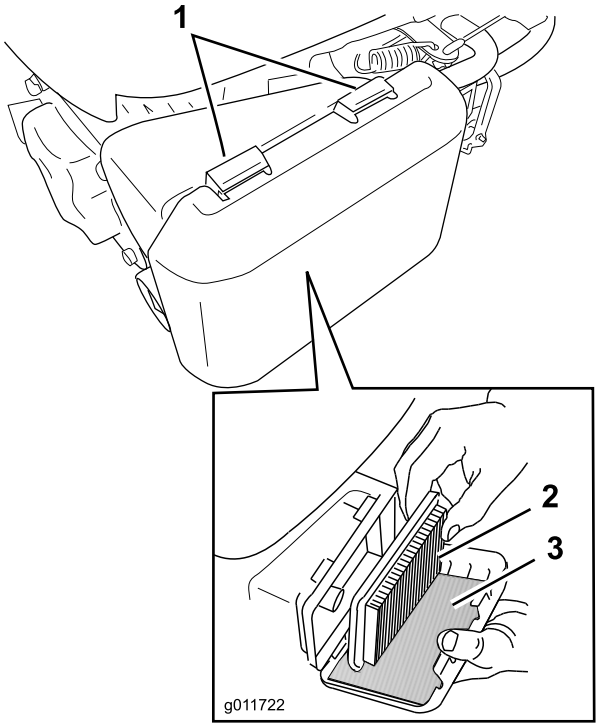

Figure 36

1. Latch tabs
2. Paper air filter
3. Foam pre-filter

2. Open the cover.
3. Remove the paper air filter and the foam pre-filter (Figure 36).
4. Inspect the foam pre-filter, and replace it if it is damaged or excessively dirty.
5. Inspect the paper air filter.
   A. If the paper air filter is damaged or is wet with oil or fuel, replace it.
   B. If the paper air filter is dirty, tap it on a hard surface several times or blow compressed air less than 30 psi (207 kPa) through the side of the filter that faces the engine.

   Note: Do not brush the dirt off the filter; brushing forces dirt into the fibers.
6. Remove dirt from the air cleaner body and cover using a moist rag (to trap the dirt and keep it from falling into the engine). **Do not wipe dirt into the air duct.**
7. Insert the foam pre-filter and the paper air filter into the air cleaner.
8. Install the cover.

Changing the Engine Oil

Service Interval: After the first 5 hours

Yearly

Run the engine a few minutes before changing the oil to warm it. Warm oil flows better and carries more contaminants.

1. Perform the pre-maintenance procedures; refer to Preparing for Maintenance (page 17).
2. Remove the dipstick.
3. Tip the machine onto its side, with the dipstick down, to drain the used oil out through the oil-fill tube (Figure 37).

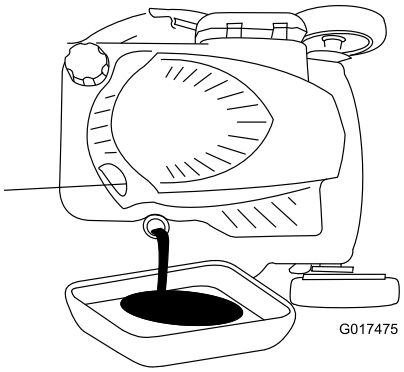

Figure 37

4. After draining the used oil, return the machine to the normal operating position.
5. Remove the dipstick and pour about 3/4 of the crankcase capacity of oil into the oil-fill tube.

   Note: Max. fill: 20 oz. (0.59 l), type: SAE 30 or SAE 10W-30 detergent oil with an API service classification of SF, SG, SH, SJ, SL, or higher.
6. Wipe off the dipstick end with a clean cloth.
7. Insert the dipstick into the oil-fill tube, but **do not** screw it in.
8. Remove the dipstick and read the oil level on the dipstick (Figure 38).

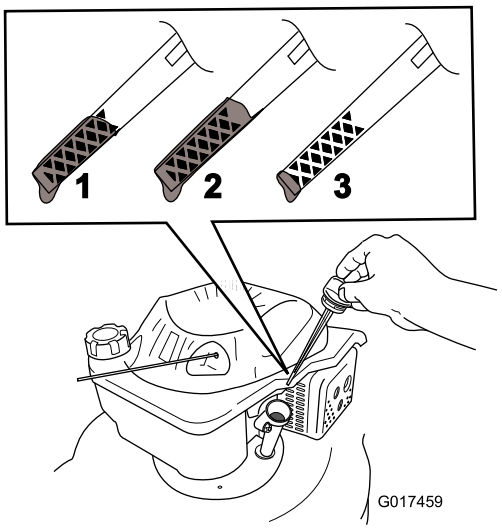

Figure 38

1. The oil level is at its maximum.
2. The oil level is too high—remove oil from the crankcase.
3. The oil level is too low—add oil to the crankcase.

- If the oil level is too low, add a small amount of oil slowly to the oil-fill tube, and then repeat steps 6 through 8 until the oil level on the dipstick is correct.
- If the oil level is too high, drain the excess oil until the oil level on the dipstick is correct.

Important: If the oil level in the crankcase is too low or too high and you run the engine, you may damage the engine.

9. Install the dipstick securely.
10. Recycle the used oil properly.

Lubricating the Wheel Gears

Service Interval: Every 25 hours

1. Wipe the grease fittings just inside the rear wheels with a clean rag (Figure 39).

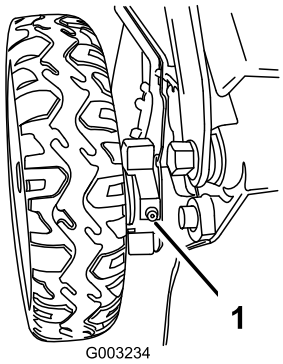

Figure 39

1. Grease fitting

2. Install a grease gun onto each fitting and gently apply 2 or 3 pumps of #2 multi-purpose, lithium-base grease.

Replacing the Blade

Service Interval: Yearly

Important: ***You will need a torque wrench to install the blade properly.*** **If you do not have a torque wrench or are uncomfortable performing this procedure, contact an Authorized Service Dealer.**

Examine the blade whenever you run out of gasoline. If the blade is damaged or cracked, replace it immediately. If the blade edge is dull or nicked, have it sharpened and balanced, or replace it.

⚠ WARNING

The blade is sharp; contacting the blade can result in serious personal injury.

Wear gloves when servicing the blade.

1. Disconnect the spark-plug wire from the spark plug. Refer to Preparing for Maintenance (page 17).
2. Tip the machine onto its side with the dipstick down.
3. Remove the 2 blade nuts and the stiffener (Figure 40).

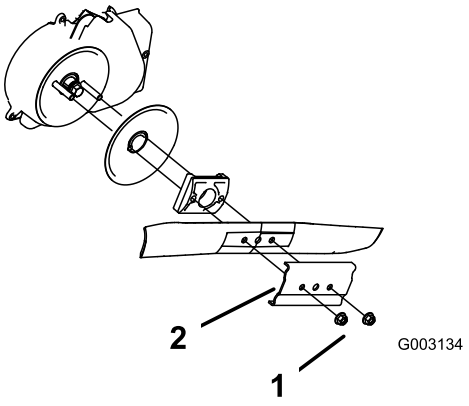

Figure 40

1. Blade nuts
2. Stiffener

4. Remove the blade (Figure 40).
5. Install the new blade (Figure 40).
6. Install the stiffener that you previously removed.
7. Install the blade nuts and torque them to 15 to 27 ft-lb (20 to 37 N-m).

Cleaning the Blade-brake-clutch Shield

Service Interval: Every 25 hours

Clean the blade-brake-clutch shield yearly to prevent the blade from stalling while you mow.

1. Disconnect the spark-plug wire from the spark plug. Refer to Preparing for Maintenance (page 17).
2. Tip the machine onto its side with the dipstick down.
3. Remove the 2 blade nuts and the stiffener (Figure 41).

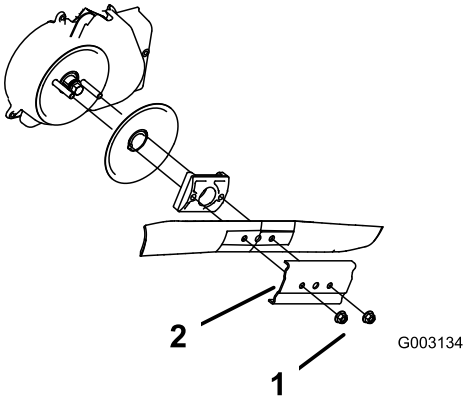

Figure 41

1. Blade nuts
2. Stiffener
3. Blade
4. Blade driver
5. Disk
6. Blade-brake-clutch shield

4. Remove the blade (Figure 41).
5. Remove the blade driver and disk (Figure 41).
6. Remove the blade brake-clutch shield (Figure 41).

7. Brush or blow out debris from the inside of the shield and around all the parts.
8. Install the blade-brake-clutch shield that you previously removed.
9. Install the blade driver and disk that you previously removed.
10. Install the blade and the stiffener that you previously removed (Figure 41).
11. Install the blade nuts and torque them to 15 to 27 ft-lb (20 to 37 N-m).

Cleaning under the Machine Housing

Service Interval: Before each use or daily

⚠ WARNING

The machine may dislodge material from under the machine housing.

- **Wear eye protection.**
- **Stay in the operating position (behind the handle) when the engine is running.**
- **Do not allow bystanders in the area.**

For best results, clean the machine soon after you have completed mowing.

1. Lower the machine to its lowest cutting height setting. Refer to Adjusting the Cutting Height (page 9).
2. Move the machine onto a flat paved surface.
3. Attach a garden hose that is connected to a water supply to the washout port on the machine housing (Figure 42).

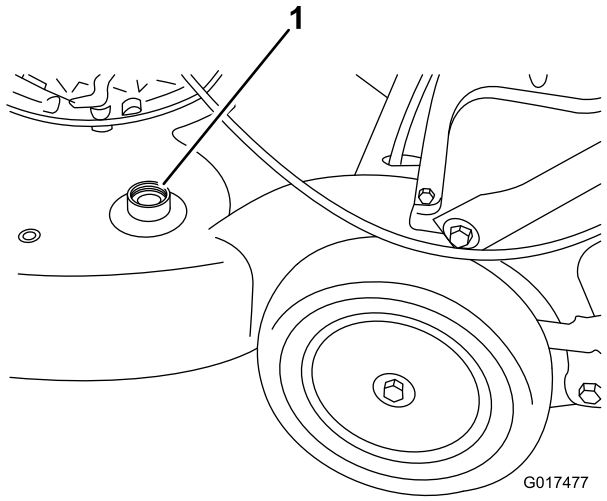

Figure 42

1. Washout port

4. Turn the water on.
5. Start the engine and run it until no more clippings come out from under the machine housing.
6. Stop the engine.
7. Shut off the water and disconnect the garden hose from the machine.
8. Start the engine and run it for a few minutes to dry the housing.

Storage

Store the machine in a cool, clean, dry place.

Preparing the Machine for Storage

⚠ WARNING

Gasoline vapors can explode.

- **Do not store gasoline more than 30 days.**
- **Do not store the machine in an enclosure near an open flame.**
- **Allow the engine to cool before storing it.**

1. On the last refueling of the year, add fuel stabilizer to the fuel as directed on the label.
2. Run the machine until the engine stops from running out of fuel.
3. Allow the engine to run until it stops. When you can no longer start the engine, it is sufficiently dry.
4. Remove the wire from the spark plug and connect the wire onto the retaining post.
5. Remove the spark plug, add 1 oz. (30 ml) of oil through the spark plug hole, and pull the starter rope slowly several times to distribute oil throughout the cylinder to prevent cylinder corrosion during the off-season.
6. Install the spark plug and tighten it with a torque wrench to 15 ft-lb (20 N-m).
7. Tighten all nuts, bolts, and screws.

Folding the Handle

⚠ WARNING

If, while folding the handle for storing or transporting the machine, you accidently bump the key and engage the blade-control bar, the engine could start and rotate the blade, causing serious personal injury.

Always remove the ignition key before you fold the handle.

1. Rotate the handle forward (Figure 43).

   Important: Route the cables to the outside of the handle knobs as you fold the upper handle.

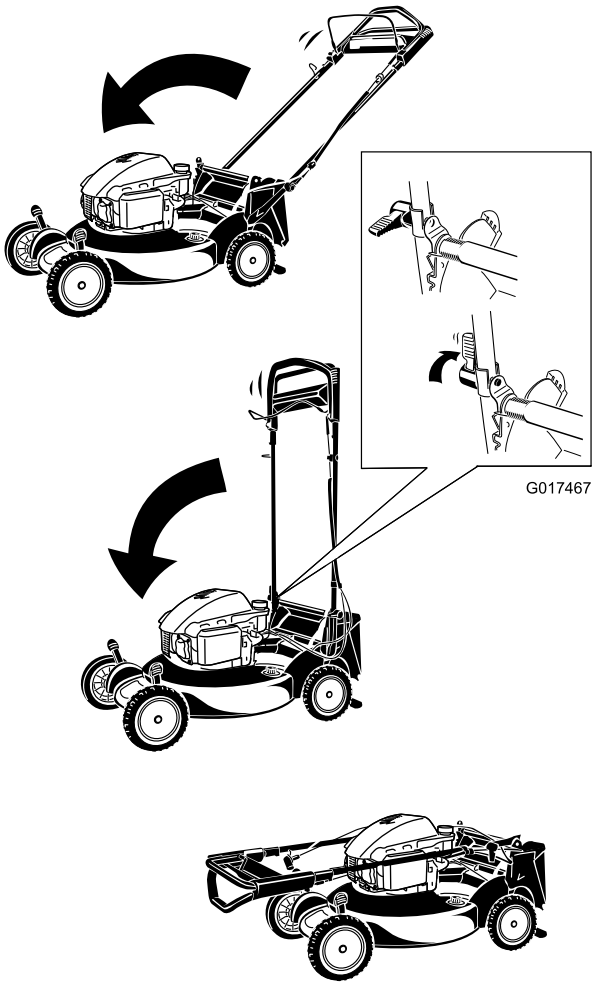

Figure 43

2. To unfold the handle, refer to 2 Assembling and Unfolding the Handle (page 5).

Removing the Machine from Storage

1. Check and tighten all fasteners.
2. Remove the spark plug and spin the engine rapidly using the starter to blow excess oil from the cylinder.
3. Install the spark plug and tighten it with a torque wrench to 15 ft-lb (20 N-m).
4. Perform any needed maintenance procedures; refer to Maintenance (page 16).
5. Check the engine oil level; refer to Checking the Engine Oil Level (page 9).
6. Fuel the fuel tank with fresh gasoline; refer to Filling the Fuel Tank (page 8).
7. Connect the wire to the spark plug.

Notes:

Notes:

The Toro Total Coverage Guarantee

A 5-Year Full Warranty (45 Day Limited Warranty for Commercial Use)

The Toro GTS Starting Guarantee

A 5-Year Full Warranty (Not Applicable for Commercial Use)

Super Recycler®
Super Bagger
Walk Power Mowers

Conditions and Products Covered

The Toro Company and its affiliate, Toro Warranty Company, pursuant to an agreement between them, jointly promise to repair the Toro Products listed below if used for residential purposes* if it is defective in materials or workmanship or if it stops functioning due to the failure of a component; or if the Toro GTS (Guaranteed to Start) engine will not start on the first or second pull, provided the routine maintenance required in the *Operator's Manual* have been performed.

This warranty covers the cost of parts and labor, but you must pay transportation costs.

The following time periods apply from the date of purchase:

Products	Warranty Period
Super Recycler® Mowers	5 year full warranty
Super Bagger Mowers	3 year full warranty
GTS (Guaranteed to Start)	3 year full warranty
Battery	1 year full warranty

Limited Warranty for Commercial Use

Gas-powered Toro Products used for commercial, institutional, or rental use, are warranted for 45 days against defects in materials or workmanship. Components failing due to normal wear are not covered by this warranty.

The Toro GTS (Guaranteed to Start) Starting Guarantee does not apply when the product is used commercially*.

Instructions for Obtaining Warranty Service

If you think that your Toro Product contains a defect in materials or workmanship, follow this procedure:

1. Contact any Authorized Toro Service Dealer to arrange service at their dealership. To locate a dealer convenient to you, refer to the *Yellow Pages* of your telephone directory (look under “Lawn Mowers”) or access our web site at www.Toro.com. You may also call the numbers listed in item #3 to use the 24-hour Toro Dealer locator system.
2. Bring the product and your proof of purchase (sales receipt) to the Service Dealer. The dealer will diagnose the problem and determine if it is covered under warranty.
3. If for any reason you are dissatisfied with the Service Dealer’s analysis or with the assistance provided, contact us at:

   Customer Care Department, RLC Division
   Toro Warranty Company
   8111 Lyndale Avenue South
   Bloomington, MN 55420-1196
   Toll free at 888-865-5688 (U.S. customers)
   Toll free at 888-865-5705 (Canadian customers)

Owner Responsibilities

You must maintain your Toro Product by following the maintenance procedures described in the *Operator's Manual*. Such routine maintenance, whether performed by a dealer or by you, is at your expense.

Items and Conditions Not Covered

There is no other express warranty except for special emission system coverage and engine warranty coverage on some products. This express warranty does not cover the following:

- Cost of regular maintenance service or parts, such as filters, fuel, lubricants, oil changes, spark plugs, air filters, blade sharpening or worn blades, cable/linkage adjustments, or brake and clutch adjustments
- Any product or part which has been altered or misused and requires replacement or repair due to accidents or lack of proper maintenance
- Repairs necessary due to failure to use fresh fuel (less than one month old), or failure to properly prepare the unit prior to any period of non-use over one month
- Pickup and delivery charges
- Operational misuse, neglect, or accidents
- Repairs or attempted repairs by anyone other than an Authorized Toro Service Dealer
- Repairs or adjustments to correct starting difficulties due to the following:
  - failure to follow proper maintenance procedures
  - rotary mower blade striking an object
  - contaminants in the fuel system
  - improper fuel (consult your *Operator's Manual* if in doubt)
  - failure to drain the fuel system prior to any period of non-use over one month
- Special operational conditions where starting may require more than two pulls:
  - first time starts after extended period of non-use over one month or seasonal storage
  - cool temperature starts such as those found in early spring and late autumn
  - improper starting procedures - if you are having difficulty starting your unit, please check the *Operator's Manual* to ensure that you are using the correct starting procedures. This can save an unnecessary visit to an Authorized Toro Service Dealer.

General Conditions

All repairs covered by these warranties must be performed by an Authorized Toro Service Dealer using Toro approved replacement parts. Repair by an Authorized Toro Service Dealer is your sole remedy under this warranty.

Neither The Toro Company nor Toro Warranty Company is liable for indirect, incidental, or consequential damages in connection with the use of the Toro Products covered by these warranties, including any cost or expense of providing substitute equipment or service during reasonable periods of malfunction or non-use pending completion of repairs under these warranties.

Some states do not allow exclusions of incidental or consequential damages, or limitations on how long an implied warranty lasts, so the above exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Countries Other than the United States or Canada

Customers who have purchased Toro products exported from the United States or Canada should contact their Toro Distributor (Dealer) to obtain guarantee policies for your country, province, or state. If for any reason you are dissatisfied with your Distributor's service or have difficulty obtaining guarantee information, contact the Toro importer. If all other remedies fail, you may contact us at Toro Warranty Company.

Australian Consumer Law: Australian customers will find details relating to the Australian Consumer Law either inside the box or at your local Toro Dealer.

*Residential purposes means use of the product on the same lot as your home. Use at more than one location, or institutional or rental use, is considered commercial use, and the commercial use warranty would apply.
