

MODEL NO. 20327B - 2000001 &amp; UP

**OPERATOR'S  
MANUAL****21" RECYCLER<sup>®</sup>  
Mower****SAFETY INSTRUCTIONS**

**WARNING:** Engine exhaust contains carbon monoxide which is an odorless, deadly poison. Carbon monoxide is also known to the State of California to cause birth defects. Do not run engine indoors or in an enclosed area.

**BEFORE OPERATING**

1. Read this manual carefully before operating the mower. Become familiar with the controls and proper use of the mower. Never allow children to operate the mower or adults to operate it without proper instructions.
2. Keep everyone, especially children and pets, away from area of operation. Thoroughly inspect area where mower will be used and remove sticks, stones, wire, and debris.
3. Wear long pants and substantial shoes. Do not operate mower while wearing open-toed shoes, jewelry, loose clothing or when barefoot.
4. Check fuel level before starting engine. Do not fill fuel tank indoors, when the engine is running or until engine cools for several minutes after running. Wipe up spilled gasoline before starting engine.
5. Keep all guards, shields, safety devices or optional side discharge chute in place. Repair or replace damaged parts, including decals. Check all safety devices before each use.
6. Traction drive is designed to stop when control bar is released.
7. Disengage the self-propelled mechanism or drive clutch before starting the engine.

**WHILE OPERATING**

8. Do not run engine indoors.
9. Always maintain secure footing. Keep a firm grip on the handle and walk; never run. Never operate mower in wet grass. Mow only in daylight or in good artificial light.
10. Mow across the face of slopes; never up and down. Use extreme caution when changing direction on slopes. Do not mow excessively steep slopes.
11. Always wear safety glasses or eye shields during operation to protect eyes from foreign objects that may be thrown from the machine. Keep face, hands, and feet away from the mower housing and cutter blade when the engine is running. Stay behind the handle until the engine stops.

12. When bagging grass, stop engine and ensure discharge door is closed before the bag is removed and emptied.

13. Shut engine off and wait for all moving parts to stop before unclogging discharge tunnel, removing grass bag or discharge tunnel plug.

14. Since the blade rotates for a few seconds after the engine is stopped, stay behind the handle until all moving parts stop.

15. After striking a foreign object or if mower vibrates abnormally, stop engine and remove wire from spark plug. Check mower for damage and make all repairs before using mower again.

16. Stop the engine before adjusting the height-of-cut.

17. Stop the engine when crossing a gravel driveway, road, or sidewalk.

18. Stop engine before leaving the operator's position—behind the handle. Disconnect wire from spark plug if mower will be unattended or not used.

19. Do not touch engine while it is running or shortly after it is stopped because engine will be hot enough to cause a burn.

**MAINTENANCE**

20. Perform only those maintenance instructions described in this manual. If major repairs are ever needed or if assistance is desired, contact your local Authorized TORO Service Dealer.

21. Before mower is cleaned, inspected, serviced or adjusted, stop engine and disconnect wire from spark plug. Keep wire away from plug to prevent accidental starting.

22. To ensure the mower is in safe operating condition, frequently check and keep all nuts, bolts, and screws tight. Ensure blade bolt is tightened to 50 ft-lb (68 N-m).

23. To reduce fire hazard, keep engine free of excessive grease, grass, leaves, and accumulations of dirt.

24. Check grass catcher bag frequently for wear or deterioration. Replace with a new bag when worn or damaged for your protection. Check that replacement bags comply with TORO's original recommendations or specifications.

25. Allow engine to cool before storing mower in any enclosure. Do not store mower near any open flame or where gasoline fumes may be ignited by a spark.

## SAFETY INSTRUCTIONS

**26.** Do not overspeed the engine by changing governor settings.

**27.** At the time of manufacture, the mower conformed to the safety standards in effect for rotary mowers. To ensure best performance and continued safety

certification of the mower, use genuine TORO replacement parts and accessories. Replacement parts and accessories made by other manufacturers may result in non-conformance with the safety standards, and that could be dangerous.

## SAFETY SYMBOL GLOSSARY

Safety alert

Keep hands and feet away from rotating blade

Engine speed (Throttle)

Ignition off

Traction drive ENGAGED

Traction drive DISENGAGED

Keep bystanders from area being mowed

Neutral

Choke on

Pull fingertip starter to start mower

Stop engine before leaving operator position

Fast

Slow

Keep all guards in place

Locked

Unlocked

Squeeze control bar against handle to engage traction drive

Read and understand operator's manual

Never open chute door on mower when engine is running, unless grass bag or optional side discharge attachment is installed

# SET-UP INSTRUCTIONS

## INSTALL HANDLE

1. Align handles and tighten handle knobs (Fig. 1). Bend handle latches slightly toward each other (Fig. 1).

Figure 1

- 1. Handle knob
- 2. Control cable
- 3. Handle stud
- 4. Handle latch
- 5. Cable tie

2. Pivot handle backward until handle stud snaps into center hole of handle latch (Figs. 1). If handle height is not satisfactory, adjust by placing handle stud into a different hole. Secure control cables in position with cable ties.

## INSTALL DISCHARGE TUNNEL PLUG

1. Open the discharge door by pulling forward on the handle and moving it rearwards (Fig. 2). Hold the discharge door handle to prevent the spring-loaded door from closing while inserting the plug.

2. Since the plug is slightly wider than the discharge tunnel opening, rotate the plug clockwise slightly while inserting it (Fig. 2). Make sure the arrow on the plug decal is pointing upwards.

Figure 2

- 1. Discharge door handle
- 2. Plug rotated clockwise

3. Push the plug all the way in until the spring clip on the bottom of the plug clicks into place, locking the plug securely into the discharge tunnel (Fig. 3). Release discharge door handle to lock top of plug.

Figure 3

- 1. Spring clip

# BEFORE OPERATING

## FILL CRANKCASE WITH OIL

Initially, crankcase must be filled with 20 ounces (0.6 L) of SAE 30 oil. Use of multi-viscosity oils (10W30, etc.) above 40° F (4° C) will result in high oil consumption and possible engine damage. Use any high quality detergent oil having the American Petroleum Institute (API) "service classification" — SE, SF or SG.

Before each use, ensure oil level is between FULL and ADD marks on dipstick (Fig. 4). Add oil if level is low.

1. Position mower on a level surface and clean around oil dipstick.
2. Remove dipstick by rotating cap counterclockwise 1/4 turn.
3. Wipe dipstick and insert it into filler neck. Rotate cap clockwise 1/4 turn. Then remove dipstick and check level of oil on side of dipstick with FULL and ADD marks (Fig. 4). If level is low, add only enough oil to raise level to FULL mark on dipstick. **DO NOT FILL ABOVE FULL MARK BECAUSE ENGINE COULD BE DAMAGED WHEN STARTED. POUR OIL SLOWLY.**
4. Insert dipstick into filler neck and rotate cap clockwise 1/4 turn to lock it in place.

**Note:** Check oil level each time mower is used or after every 5 operating hours. Initially, change oil after the first 2 hours of operation; thereafter, change oil after every 25 hours of operation. More frequent oil changes are required in dusty or dirty conditions.

Figure 4

1. Dipstick      2. FULL mark      3. ADD mark

## WARNING

**DANGER:** Gasoline is extremely flammable and explosive under certain conditions. Do not smoke when handling fuel and keep fuel far away from open flames and sparks. Never buy more than a 30 day supply of gasoline. Store it in an approved container. Keep gasoline out of reach of children.

Refuel outdoors and only when engine is cold. Do not fill tank full. Fill tank to within 1/4" to 1/2" (6 to 13 mm) from top of tank, not into filler neck. This space is for expansion of fuel. Use funnel or spout to prevent spilling. Wipe up any spilled gas.

## FILL FUEL TANK WITH GASOLINE

**Note:** The Toro Company strongly recommends the use of fresh, clean, **UNLEADED** regular grade gasoline in Toro gasoline powered products. Unleaded gasoline burns cleaner, extends engine life, and promotes good starting by reducing the build-up of combustion chamber deposits. Leaded gasoline can be used if unleaded is not available.

1. Clean around fuel tank cap and remove cap from tank (Fig. 5). Do not fill tank full. Using unleaded gasoline, fill fuel tank to within 1/4 to 1/2 inch (6 to 13 mm) from top of tank, not into filler neck.
2. Reinstall fuel tank cap and wipe up any spilled gasoline.

Toro also recommends that Toro Stabilizer/Conditioner be used regularly in all Toro gasoline powered products during operation and storage seasons. Toro Stabilizer/Conditioner cleans the engine during operation

and prevents gum-like varnish deposits from forming in the engine during periods of storage.

**IMPORTANT: DO NOT MIX OIL WITH THE GASOLINE. NEVER USE METHANOL, GASOLINE CONTAINING METHANOL, GASOLINE CONTAINING MORE THAN 10% ETHANOL, OR WHITE GAS BECAUSE ENGINE FUEL SYSTEM DAMAGE COULD RESULT.**

**DO NOT USE FUEL ADDITIVES OTHER THAN THOSE MANUFACTURED FOR FUEL STABILIZATION DURING STORAGE SUCH AS TORO'S STABILIZER/CONDITIONER OR A SIMILAR PRODUCT. TORO'S STABILIZER/CONDITIONER IS A PETROLEUM DISTILLATE BASED STABILIZER/CONDITIONER. TORO DOES NOT RECOMMEND STABILIZERS WITH AN ALCOHOL BASE SUCH AS ETHANOL, METHANOL OR ISOPROPYL. STABILIZERS SHOULD NOT BE USED TO TRY TO ENHANCE THE POWER OR PERFORMANCE OF MACHINE.**

**Figure 5**

**1. Fuel tank cap**

## RECYCLER® MOWER TIPS

### RECYCLER® MOWER FEATURES

The Toro Recycler® mower has a new and completely different cutting concept that leaves your lawn with a bagged look without bagging clippings.

Your Recycler® mower is equipped with special parts which increase your mower's ability to cut and recut grass clippings, leaves, and other yard debris into tiny particles and inject them down into the grass. These parts are:

- A.** A special blade and blade stiffener
- B.** Four special "kicker plates" positioned on the underside of the mower deck in strategic positions (Fig. 6)

**Figure 6**

**1. Kicker plates**

- C.** A special plug which locks into the mower's discharge tunnel (a fifth kicker is on the plug) (Fig. 7)

**Figure 7**

**1. Plug      2. Kicker**

The blade and four kicker plates are permanent parts of your mower. The blade should be removed only for sharpening or replacement. The kickers should never be removed, unless they need to be replaced. They do not interfere with the normal bagging or optional side discharge operations of the mower.

The plug, however, is a removable part, just as the grass bag and optional side discharge chute are removable parts. You cannot use the plug in combination with either the grass bag or the side discharge chute.

It is possible to mow without using the plug by closing the discharge tunnel door. However, your lawn appearance will be much more satisfactory if you use the plug as it has an additional kicker (Fig. 7) that helps drive the clippings down into the grass.

# RECYCLER® MOWER TIPS

## WARNING

Grass clippings and other debris can be thrown from an open discharge tunnel with enough force to cause personal injury. Never start or operate the mower unless one of the following is true:

1. The discharge tunnel plug is locked securely in discharge tunnel.
2. The grass bag is locked in place.
3. The optional side discharge chute is locked in place.
4. The discharge tunnel door is locked closed.

## WARNING

Wet grass can cause you to slip and contact blade. Blade contact can seriously injure you. Mow only in dry conditions.

## TIPS FOR CUTTING GRASS CLIPPINGS

Even with the Recycler® mower, you may encounter conditions where it is not possible to hide all of the finely cut clippings or leaves all of the time down in the grass. Follow these instructions for the best cutting results and lawn appearance:

- Maintain a sharp blade throughout the cutting season. Periodically file down nicks on blade.
- Clean any residue from the underside of mower housing, kickers, and plug after each use. See Cleaning Mower Housing, Discharge Tunnel, Belt Cover and Plug, page 13.
- When cutting grass over 6" tall, you may want to cut the lawn twice to hide clippings down in the grass.
- In the heat of the summer, it is generally best to cut grass at the C, D or E height-of-cut settings. Only about 1/3 of the grass blade should be cut. Cutting below the C setting is not recommended unless grass is sparse or it is late fall when grass growth begins to slow down. If long grass must be cut, you may need to use a higher height-of-cut setting and a slower

walking speed; then recut the grass at a more normal setting. If grass is too long and leaves clumps on top of lawn, mower may plug and cause engine to stall.

- Alternate mowing direction. This helps disperse clippings over lawn for even fertilization.

If the finished cut lawn appearance is unsatisfactory, try one or more of the following:

- Sharpen the blade.
- Walk at a slower pace while mowing.
- Raise the height-of-cut setting on your mower.
- Cut your grass more frequently.
- Overlap cutting swaths instead of cutting a full swath with each pass.
- Mow across the marginal areas a second time.
- Set height-of-cut on front wheels one notch lower than rear wheels. (example: set front wheels at "C" setting and rear wheels at "D" setting)

## TIPS FOR CUTTING LEAVES

You can cut up leaves in the fall instead of bagging. If you decide to bag, the Recycler® mower reduces the number of leaf bags you will need by finely chopping up the leaves before they are bagged. Some leaf particles will be injected back down into the soil. When spring arrives, the leaf particles will have decomposed and returned valuable nutrients to the soil.

- Ensure leaves are dry.
- When cutting is complete, always be sure that 50% of the lawn shows through the cut leaf cover. This may require one or more passes over the leaves.
- For light leaf coverage, position all wheels at the same height-of-cut setting.
- If there are more than 5" of leaves on lawn, set the front wheels one or two notches higher than the rear wheels. This makes it easier to feed leaves under mower deck.
- Walk at a slower mowing speed if leaves are not being cut up finely enough to be hidden down in the grass.
- If you cut up a lot of oak leaves, you might want to add lime to your grass in the spring. Lime reduces the acidity of oak leaves.

# OPERATING INSTRUCTIONS

## OPERATING TIPS

1. **CHECK OIL LEVEL** — Maintain oil level between ADD and FULL marks as shown on dipstick (Fig. 4).
2. **BEFORE EACH MOWING** — Ensure self-propelled drive and control bar functions properly. When control bar is released, self-propelled drive is designed to stop.

## STARTING, STOPPING AND SELF-PROPELLING

1. **CONTROLS** — Throttle, ground speed control and self-propel control bar are on upper handle (Fig. 8). Recoil starter is on top of engine (Fig. 9).

Figure 8

1. Throttle control
2. Ground speed control
3. Self-propel control bar

Figure 9

1. Recoil starter

2. Push spark plug wire onto spark plug (Fig. 17).
3. **STARTING** — Move ground speed control to "N" and throttle to CHOKE . Pull recoil starter out until positive engagement results; then pull vigorously to

start the engine. When engine starts, remove throttle from choke and regulate as desired.

4. **GROUND SPEED** (Fig. 8) — Ground speed varies depending on distance between control bar and handle. Move ground speed control to desired setting. Number "1" is slow, "2" is medium, and "3" is a fast walking pace. Move ground speed control to "N" when using the mower for trimming and whenever leaving mower.

5. **WHEEL TRACTION OPERATION** (Fig. 8) — Move control bar into the RUN/SHIFT position. Move ground speed control to desired setting and squeeze control bar against handle to drive.

**Note:** The drive wheels are equipped with freewheeling clutches which enable the mower to be pulled rearward easier when the wheel drive is disengaged. To disengage the clutches, mower must be pushed forward at least 1" after wheel drive operation has stopped.

6. **STOPPING** — To stop engine, move throttle to engine off  position. Pull wire off spark plug if mower will be unattended or not used.

## USING DISCHARGE TUNNEL PLUG

1. Make sure engine is off. Open the discharge door by pulling forward on the handle and moving it rearwards (Fig. 10). Hold the discharge door handle to prevent the spring-loaded door from closing while inserting the plug.
2. Since the plug is slightly wider than the discharge tunnel opening, you must rotate the plug clockwise slightly while inserting it (Fig. 10). Make sure the arrow on the plug decal is pointing upwards.

Figure 10

1. Discharge door handle
2. Plug rotated clockwise

# OPERATING INSTRUCTIONS

3. Push the plug all the way in until the spring clip on the bottom of the plug clicks into place, locking the plug securely into the discharge tunnel (Fig. 11). Release the discharge door handle to lock the top of the plug.

Figure 11

1. Spring clip

4. To remove the plug, move the discharge door handle rearwards while at the same time lift up the spring clip on the bottom of the plug. When the plug is unlocked, pull it out of the discharge tunnel.

## USING GRASS BAG

Occasionally you may wish to use the grass bag for bagging extra long grass, lush grass or leaves.

1. Stop engine and wait for all moving parts to stop.
2. Ensure discharge door handle is fully forward and pin is engaged in catch (Fig. 12).

Figure 12

1. Bag frame on retaining post
2. Pin engaged in catch
3. Handle fully forward. Discharge door closed.

3. **INSTALLING BAG** — Slide hole in bag frame onto retaining post on housing (Fig. 12) and set rear of bag frame onto lower handle.

4. Pull discharge door handle forward until pin clears catch and move handle rearward until pin locks in bag notch (Fig. 13). Discharge door in mower housing is now open.

Figure 13

1. Pin locked in bag notch

## CAUTION

Grass clippings and other debris can be thrown from an open discharge tunnel with enough force to cause personal injury. Never open door on discharge tunnel when engine is running unless the grass bag, optional side discharge attachment or discharge tunnel plug is securely installed.

The grass bag material will catch and contain the majority of foreign objects such as small stones and other similar debris. The bag material, however, is subject to normal wear and deterioration. So check the bag frequently, and if it is damaged, install a new genuine TORO replacement bag that has this or a similar warning.

# OPERATING INSTRUCTIONS

5. **EMPTYING BAG**—Stop engine and wait for all parts to stop. Raise discharge door handle and move it forward to engage the locking pin with catch (Fig. 12). Grasp handle at front and rear of bag and lift bag off mower. Gradually tip bag forward to empty clippings.

6. To reinstall bag, repeat steps 3-4.

## CAUTION

The discharge door must close completely to prevent grass clippings and other objects from being thrown from discharge tunnel. Thrown objects can cause personal injury. If discharge door cannot be closed because grass clippings clog discharge area, gently move discharge door handle back and forth until door can be closed completely. Do not force discharge door closed because door or handle may be damaged. If door still cannot be closed, stop engine and remove obstruction.

## ADJUSTING HEIGHT-OF-CUT

Five letters cast into the housing represent each graduated height-of-cut increment (Fig. 14).

1. Stop the engine and wait for all moving parts to stop.

2. For easier adjustment, lift housing up so wheel is off ground. **Do not put fingers under housing when lifting.** Squeeze adjusting lever toward wheel and move to desired setting (Fig. 14). Ensure pin on adjusting lever engages slot in housing. Adjust all wheels to the same setting.

**Note:** Front wheels can be adjusted to 1/2 inch. Move adjusting lever past "A" and release pin into hole in housing.

Figure 14

# MAINTENANCE

## CAUTION

To prevent accidental starting of engine, pull wire off spark plug before performing adjustments or maintenance.

## SERVICING AIR CLEANER

Normally, replace air cleaner after every 25 operating hours. More frequent replacement is required when mower is operated in dusty or dirty conditions. See your Authorized Toro Service Dealer for replacement parts.

1. Stop engine and pull wire off spark plug (Fig. 17).
2. Remove screw securing air cleaner cover to engine (Fig. 15). Tilt cover down and clean cover thoroughly.
3. Remove paper air cleaner filter (Fig. 16) and discard.
4. Insert new paper air cleaner filter cartridge so lip touches back plate as shown in Figure 16.
5. Replace air cleaner cover and secure with screw.

**IMPORTANT:** Do not operate engine without air cleaner element because extreme engine wear and damage will likely result.

Figure 15

1. Air cleaner cover

2. Screw

# MAINTENANCE

Figure 16

- |                              |          |
|------------------------------|----------|
| 1. Lip                       | 4. Cover |
| 2. Paper air cleaner element | 5. Screw |
| 3. Back plate                |          |

## REPLACING SPARK PLUG

Use a Champion RJ19LM spark plug or equivalent. Correct air gap is 0.030" (0.76 mm). Remove plug after every 25 operating hours and check its condition.

1. Stop engine and pull wire off spark plug (Fig. 17).

Figure 17

1. Spark plug wire

2. Clean around spark plug and remove plug from cylinder head.

**IMPORTANT:** Replace a cracked, fouled, or dirty spark plug. Do not sand blast, scrape, or clean electrodes because engine damage could result from grit entering cylinder.

3. Set air gap at 0.030" (0.76 mm) (Fig. 18). Install correctly gapped spark plug and gasket seal. Tighten plug firmly to 15 ft-lb (20 N-m).

Figure 18

## DRAINING GASOLINE

1. Stop engine and wait for engine to cool. Pull wire off spark plug (Fig. 17).

**Note:** Drain gasoline from a cold engine only.

2. Remove cap from fuel tank and use pump-type syphon to drain fuel into clean gas can.

**Note:** This is the only procedure recommended for draining fuel.

## ADJUSTING THROTTLE

Throttle control adjustment may be required if engine does not start or stop. Whenever a new throttle control cable is installed, throttle must be adjusted.

1. Stop engine and pull wire off spark plug (Fig. 17).

2. Move throttle control forward to FAST  position.

3. Loosen cable clamp screw until throttle cable slides (Fig. 19). Align holes in throttle lever and throttle bracket using a .12" (3 mm) dia. pin or a 1/8" dia. drill (Fig. 20). Tighten cable clamp screw to lock adjustment in place.

Figure 19

- |                     |                      |
|---------------------|----------------------|
| 1. Throttle lever   | 3. Cable clamp screw |
| 2. Throttle bracket | 4. Throttle cable    |

# MAINTENANCE

Figure 20

|-------------------|---------------------|
| 1. Aligned holes  | 4. Drill            |
| 2. Throttle cable | 5. Throttle bracket |
| 3. Throttle lever |                     |

## CHANGING CRANKCASE OIL

Change oil after the first 2 operating hours and every 25 hours thereafter. Since warm oil drains better and carries more contaminants than cold, run engine for a minute or so before draining oil.

1. Stop engine and pull wire off spark plug (Fig. 17).
2. If necessary, remove grass bag. Drain gasoline from fuel tank: refer to Draining Gasoline, page 10.
3. Tip mower on its right side. Remove drain plug from underside of mower using a 5/16" allen wrench (Fig. 21) or 3/8" socket extension with a wrench for turning (Fig. 22). Plug style will vary.

Figure 21

1. Oil drain plug (requires an allen wrench)

Figure 22

1. Oil drain plug (requires a 3/8" socket extension and wrench)

4. Place a drain pan under mower.
5. Lower mower to allow oil to drain into pan.
6. After draining, clean drain plug and reinstall it. Wipe up any spilled oil. Fill engine with fresh oil: refer to Fill Crankcase With Oil, page 4.

## ADJUSTING WHEEL DRIVE

If mower does not self-propel or self-propels when control bar is **more** than 1-1/2 inches from the handle, adjust wheel drive control knob on rear of gear box.

1. If necessary, remove grass bag.
2. ADJUSTMENT (Fig. 23) – Rotate control knob clockwise 1/2 turn if mower does not self-propel. If mower creeps forward, rotate knob 1/2 turn counterclockwise to loosen belt.

Figure 23

1. Control knob

# MAINTENANCE

**3. CHECK ADJUSTMENT**—Adjustment is correct when control bar is about 1-1/2 inches from handle (Fig. 24) and wheels start to turn freely.

Figure 24

4. Repeat steps 2 and 3 until properly adjusted.

## INSPECTING/REMOVING/SHARPENING BLADE

Always mow with a sharp blade. A sharp blade cuts cleanly and without tearing or shredding the grass blades like a dull blade.

1. Stop engine and pull wire off spark plug (Fig. 17).
2. Drain gasoline from fuel tank; refer to Draining Gasoline, page 10.
3. Tip mower on its right side (Fig. 25). Avoid rotating blade because starting problems may result.

Figure 25

1. Blade
2. Blade stiffener
3. Blade bolt and lockwasher

**4. INSPECTING BLADE**—Carefully examine blade for sharpness and wear, especially where flat and curved parts meet (Fig. 26A). Since sand and abrasive material can wear away the metal that connects the flat and curved parts of the blade, check blade before using the mower. If a slot or wear is noticed (Fig. 26B & C), replace blade. Refer to step 5.

Figure 26

1. Sail
2. Flat part of blade
3. Wear
4. Slot formed

**Note:** For best performance, install new blade before cutting season begins. During the year, file down small nicks to maintain the cutting edge.

## CAUTION

**If blade is allowed to wear, a slot may form near the sail. Eventually a piece of blade may break off resulting in serious injury to yourself or a bystander. Inspect blade periodically for wear or damage.**

**5. REMOVING BLADE**—Grasp end of blade using a rag or thickly padded glove. Remove blade bolt, lockwasher, blade stiffener and blade (Fig. 25).

**6. SHARPENING BLADE**—Using a file, sharpen top side of blade and maintain original cutting angle (Fig. 27). The blade will remain balanced if same amount of material is removed from both cutting edges.

Figure 27

**IMPORTANT:** Check balance of blade by putting it on a blade balancer. An inexpensive balancer can be purchased at a hardware store. A balanced blade stays in a horizontal position and an unbalanced blade settles to the heavy side. If blade is not balanced, file more metal off cutting edge on heavy end of blade.

# MAINTENANCE

7. Install sharp, balanced TORO blade, blade stiffener, lockwasher and blade bolt. Sail part of blade must point toward top of mower housing to ensure correct installation. Tighten the blade bolt to 50 ft-lb (68 N·m).

## LUBRICATION

After every 25 operating hours or when season ends, front and rear wheels must be lubricated.

1. Apply 2 or 3 drops of light oil on inside of front and outside of all wheel bolts. Spin wheels to distribute oil into bushings. Wipe up excess oil.
2. Move rear wheel height-of-cut levers to "C" setting. Wipe grease fittings with clean rag (Fig. 28). Install grease gun onto fitting and gently apply 2 or 3 pumps of #2 Multi-Purpose Lithium Base Grease. Excess pressure may damage seals.

Figure 28

1. Grease fitting

## CLEANING MOWER HOUSING, DISCHARGE TUNNEL, BELT COVER AND PLUG

To ensure best performance, the discharge tunnel plug must be cleaned after each use. When grass is thick and lush, clippings may collect on and around the plug; this may make plug removal difficult. After each use, remove plug from discharge tunnel and clean off all debris.

Keep underside of mower housing clean. Be especially careful to keep kickers on underside of mower housing free of debris (Fig. 29).

Always be sure that discharge tunnel door locks closed when handle is released. If debris prevents discharge door from locking closed, clean inside of discharge tunnel and door thoroughly.

Figure 29

1. Kicker plates

1. Stop engine and pull wire off spark plug (Fig. 17).
2. Tip mower on its right side (Fig. 29). Avoid rotating blade because starting problems may result.
3. Remove dirt and grass clippings that stick to housing with a hardwood scraper. Avoid burrs and sharp edges.
4. Turn mower upright.
5. Remove debris from inside of discharge tunnel.
6. Remove bolts securing belt cover (Fig. 30) to mower housing. Lift off cover and brush out all debris from belt area. Reinstall belt cover.
7. Clean discharge tunnel plug.

Figure 30

1. Belt cover

# MAINTENANCE

## PREPARING MOWER FOR STORAGE

1. For long term storage, either drain gasoline from fuel tank or add a fuel additive to the gasoline. To drain gasoline, refer to Draining Gasoline, page 10. After fuel is drained, start engine and let it idle until all fuel is consumed and engine stops. If gasoline is not drained and a fuel stabilizer is not added, gum-like varnish deposits will form and cause poor engine operation, even starting problems.

Fuel can be left in gas tank only if a fuel stabilizer, such as Toro's Stabilizer/Conditioner, is added to gasoline before storing. Toro's Stabilizer/Conditioner is a petroleum distillate based stabilizer/conditioner. Toro does not recommend stabilizers with an alcohol base, such as ethanol, methanol or isopropyl. Use fuel stabilizer in recommended quantities as specified on container.

Under normal conditions, fuel additives remain effective in fuel for 6-8 months.

2. Drain oil: refer to Changing Crankcase Oil, page 11. After oil is drained, do not fill crankcase with oil until the following steps (3-10) are completed.

3. Remove spark plug and pour 2 tablespoons of SAE 10W30 oil into hole in cylinder. Pull starter rope

slowly to coat inside of cylinder. Install spark plug and tighten to 15 ft-lb (20 N·m). **DO NOT INSTALL WIRE ON SPARK PLUG.**

4. Clean mower housing: refer to Cleaning Mower Housing, Discharge Tunnel, Belt Cover and Plug, page 13.

5. Check condition of blade: refer to Inspecting/Removing/Sharpening Blade, page 12.

6. Tighten all nuts, bolts, and screws.

7. Clean dirt and chaff from cylinder, cylinder head fins, and blower housing. Also remove grass clippings, dirt, and grime from external parts of the engine, shrouding, and top of mower housing.

8. Clean air cleaner: refer to Servicing Air Cleaner, page 9.

9. Lubricate the wheels: refer to Lubrication, page 13.

10. Touch up all rusted or chipped paint surfaces. Toro Re-Kote paint is available from an Authorized TORO Service Dealer.

11. Fill crankcase with oil; refer to Fill Crankcase With Oil, page 4.

12. Store mower in a clean, dry place. Cover mower to keep it clean and protected.

## PRODUCT IDENTIFICATION

A model and a serial number decal is located on the underside of the control panel. Always refer to specific numbers on this decal in correspondence or when replacement parts are needed.

## TORO SERVICE SUPPORT

If help - concerning safety, set-up, operation, maintenance, or troubleshooting - is ever needed, contact the local Authorized TORO Service Dealer or Distributor. Refer to the "Yellow Pages" for assistance. In addition to skilled service technicians, the dealer and distributor have factory approved accessories and replacement parts. Keep your Toro all TORO. Buy genuine TORO replacement parts and accessories.

## OPTIONAL EQUIPMENT

For special conditions the following accessories may be purchased at your local authorized TORO Service Dealer.

1. **Side Discharge Kit, Model No. 59168**—Installs in seconds. Rear mounted in place of the grass bag. Disperses clippings while trimming on both sides (Fig. 31).

2. **Spark Arrestor, Briggs & Stratton Part No. 398067**—If a spark arrestor is required because of local, state, or federal regulations, it may be purchased from an Authorized Toro Service Dealer. If mower is operated on any California forest, brush, or grass covered land without a properly operating spark arrestor, the operator is violating state law, Section 4442 Public Resources Code.
