Installation

Loose Parts

Use the chart below to verify that all parts have been shipped.

Description	Qty.	Use
No parts required	—	Remove the blades.
Blades	2	Install the blades.

Removing the Blades

Note: If your blades have a blade stiffener as shown in [Figure 1](#), **do not** use the blade stiffener when installing the new blades.

1. Disengage the blade-control switch (PTO).
2. Stop the engine, wait for all moving parts to stop, and remove the key before leaving the operating position.
3. Hold the blade end using a rag or thickly-padded glove. Remove the blade bolt, curved washer, blade stiffener (certain models only), and blade from the spindle shaft ([Figure 1](#)).

Figure 1

|-----------------------|--|
| 1. Sail area of blade | 4. Blade bolt |
| 2. Blade | 5. Blade stiffener—discard (certain models only) |
| 3. Curved washer | |

Retain the blade stiffener for use with blades that require it. The replacement blades within this kit have a different design which do not require the stiffener (Figure 2).

| 2. Cross section of standard blade | 5. Cross section of new blade |
| 3. Stiffener required | 6. Bends in cross section provides internal rigidity |

Installing the Blades

1. Install the blade onto the spindle shaft (Figure 3).

Important: The sail area (curved part) of the blade must be pointing upward toward the inside of the mower to ensure proper cutting.

Figure 3

|-----------------------|------------------|
| 1. Sail area of blade | 3. Curved washer |
| 2. Blade | 4. Blade bolt |

2. Install the curved washer (cupped side toward the blade) and the blade bolt (Figure 3).

Note: Do not install a blade stiffener. These blades do not require the blade stiffener bracket (Figure 1).

3. Torque the blade bolt to 47-88 N-m (35-65 ft-lb).
